STRATEGY FOR NEW INDIA @ 75

MODULE - 19

19

SMART CITIES FOR URBAN
TRANSFORMATION

OBJECTIVES

- To drive job creation and economic growth.
- To significantly improve efficiencies in service delivery.
- To leverage technology for inclusive, sustainable and participatory development by 2022-23.

19

SMART CITIES FOR URBAN
TRANSFORMATION

PRESENT SCENARIO

- Smart Cities is an approach to urban development characterized by **area-based development** with **efficient delivery** of basic infrastructure and services in an **equitable manner** and **citizens' participation**.
- Government selected 99 cities with an outlay of Rs.2.04 lakh crore.
- These cities started implementing projects like
 - ❖ Smart Command and Control Centres
 - ❖ Smart area-based development
 - ❖ Intelligent Transport Systems
 - ❖ Smart Parks.

- These have the unique feature of integration between different infrastructural elements of the projects.

As of 14 May 2018, projects worth Rs.4,800 crores have been completed and works worth more than Rs.20,000 crores are underway.

19

SMART CITIES FOR URBAN TRANSFORMATION

CONSTRAINTS

- 7 Financing smart cities and financial sustainability of ULBs.
- 6 Availability of skilled human resources to handle various functional domains.
- 5 Data-driven decision making for service delivery and resource sustainability.
- 4 A digital master plan or a digital strategy and roadmap.

CHALLENGES
INCLUDE THE NON-
AVAILABILITY OF
THESE ASPECTS

- 1 Institutional mechanism for inter-agency coordination, including Special Purpose Vehicles, for effective delivery.
- 2 Robust spatial plan as an overall framework within which smart city planning and implementation can happen.
- 3 Smart mechanisms to enhance the voices of the urban poor, slum dwellers, migrants and other underprivileged citizens.

FOUR PARADIGMS TO LEVERAGE SMART CITIES MISSION

SMART CITIES FOR URBAN TRANSFORMATION

WAY FORWARD

1

ECONOMY

1. SCALING AREA-BASED DEVELOPMENT

- We have to measure the impact of current area-based development projects on the domains of:
 - Ease of living
 - Economic growth
 - Investments
 - Job creation
 - Citizens' participation.
- The Central Government can consider transferring the lessons learnt from these projects to other cities.
- States should also be encouraged to launch their own state-level missions to other cities.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

1

ECONOMY

2. MOBILITY

- An integrated institutional architecture for planning and coordinating the regulation of mobility, such as a **Unified Metropolitan Transport Authority** is needed.
- Spatial plans should provide for integrating land-use and transport planning to support more mixed-use development.
- Focus should be on public transport.
- A pooled **Green Transport Fund** to support such investments is recommended.
- A high-level **inter-ministerial electric vehicle mission** is necessary.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

1

ECONOMY

3. ACHIEVING DESIRED SERVICE
DELIVERY LEVELS

- Funds for the provisioning of basic services and infrastructure are accessed from complementary missions, such as the **AMRUT**, **Swachh Bharat Mission** and **Housing for All**.
- There is a need for a framework that mandates measurable outputs and outcomes for all capital investments in infrastructure and services in cities.

These outputs and outcomes should be pre-defined and measured at quarterly intervals.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

1

ECONOMY

4. DIGITAL TRANSFORMATION ROADMAP

Cities are using ICT in three ways ...

- A single application to address burning problems, say, waste collection and then adding more applications as per the needs and priorities of the city.
- Building infrastructure and services
- Experimenting with a number of applications without having a long-term or definitive vision in place.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

1

ECONOMY

4. DIGITAL TRANSFORMATION ROADMAP

WHAT IS MISSED?

- Here we ignore the hidden value in human interactions i.e. among citizens, with the city's infrastructure and the environment. These contain data and information.
- Digital technology has the potential to recognize and capture the hidden value in their interactions.

Cities need to put in place a digital transformation roadmap across both hard infrastructure and software applications.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

1

ECONOMY

4. DIGITAL TRANSFORMATION ROADMAP

USE GEOGRAPHIC INFORMATION
SYSTEMS EXTENSIVELY!

- These should be used for geo-locating, mapping and publishing public assets in the city such as parks, playgrounds, public toilets, bus stops, streetlights, manholes, water and sewerage lines, storm water drains, power lines etc.,
- Municipal Acts need to provide for a digital transformation roadmap for Urban Local Bodies as a mandatory policy document.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

2

EQUITY

INCLUSIVE DEVELOPMENT

**Pradhan
Mantri
Jan Dhan
Yojana**

- Cities must ensure that the urban poor and slum dwellers, including recent migrants can avail of city services and subsidies and are financially included through the Jan Dhan Yojana.
- Cities should dedicate a single-window facility for the urban poor to access basic services such as water supply, drainage and sewerage and affordable housing in the form of dormitory and rental housing.

19

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

3

ENVIRONMENT

RESILIENT CITIES

11 SUSTAINABLE CITIES
AND COMMUNITIES

सत्यमेव जयते

**Ministry of Housing
and Urban Affairs**
Government of India

- India should mainstream the resilient cities approach.
- It should also be in line with the Sustainable Development Goal No-11.
- SDG-11 emphasizes the sustainable development of cities and communities.
- Environment sustainability should be recognized as a distinct goal.

The Ministry of Housing and Urban Affairs can issue model guidelines in this context.

SMART CITIES FOR URBAN
TRANSFORMATION

WAY FORWARD

4

ENGAGEMENT

- More than 20 smart Command and Control Centres are under implementation and an equal number are under tendering. They will control and monitor online water and power supply, sanitation, traffic movement, integrated building management, city connectivity etc.
- About six of these centres have been completed in **Vishakhapatnam, Kakinada, Surat, Nagpur, Vadodara and Ahmedabad**.
- There is a need to use the information available in these centres to develop urban data observatories with a flexible architecture and continue open source accessibility.

- The purpose of such observatories is to serve as a decision support mechanism for policy makers and to engage citizens.
- Institutionally, there is a need to leverage information to achieve better inter-agency coordination within ULBs and with SPVs.
