

GEOGRAPHY

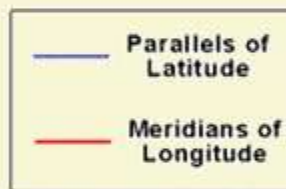

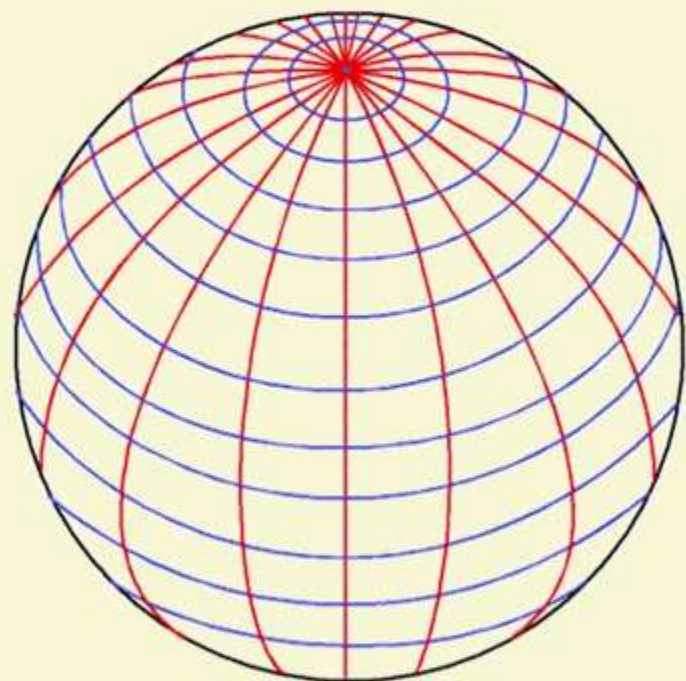

PHYSICAL GEOGRAPHY

MODULE -10

- LATITUDES AND LONGITUDES
- EQUATOR AND COUNTRIES
- TROPIC OF CANCER AND COUNTRIES
- TROPIC OF CAPRICORN AND COUNTRIES

LATITUDES AND LONGITUDES

- 1** These are imaginary lines on the globe, one set running east and west, parallel to the Equator and these are latitudes.
- 2** The other set runs north and south passing through the poles and these are called lines of longitude.
- 3** The intersection of latitude and longitude pin-points any place on the Earth's surface.

DIFFERENCE BETWEEN

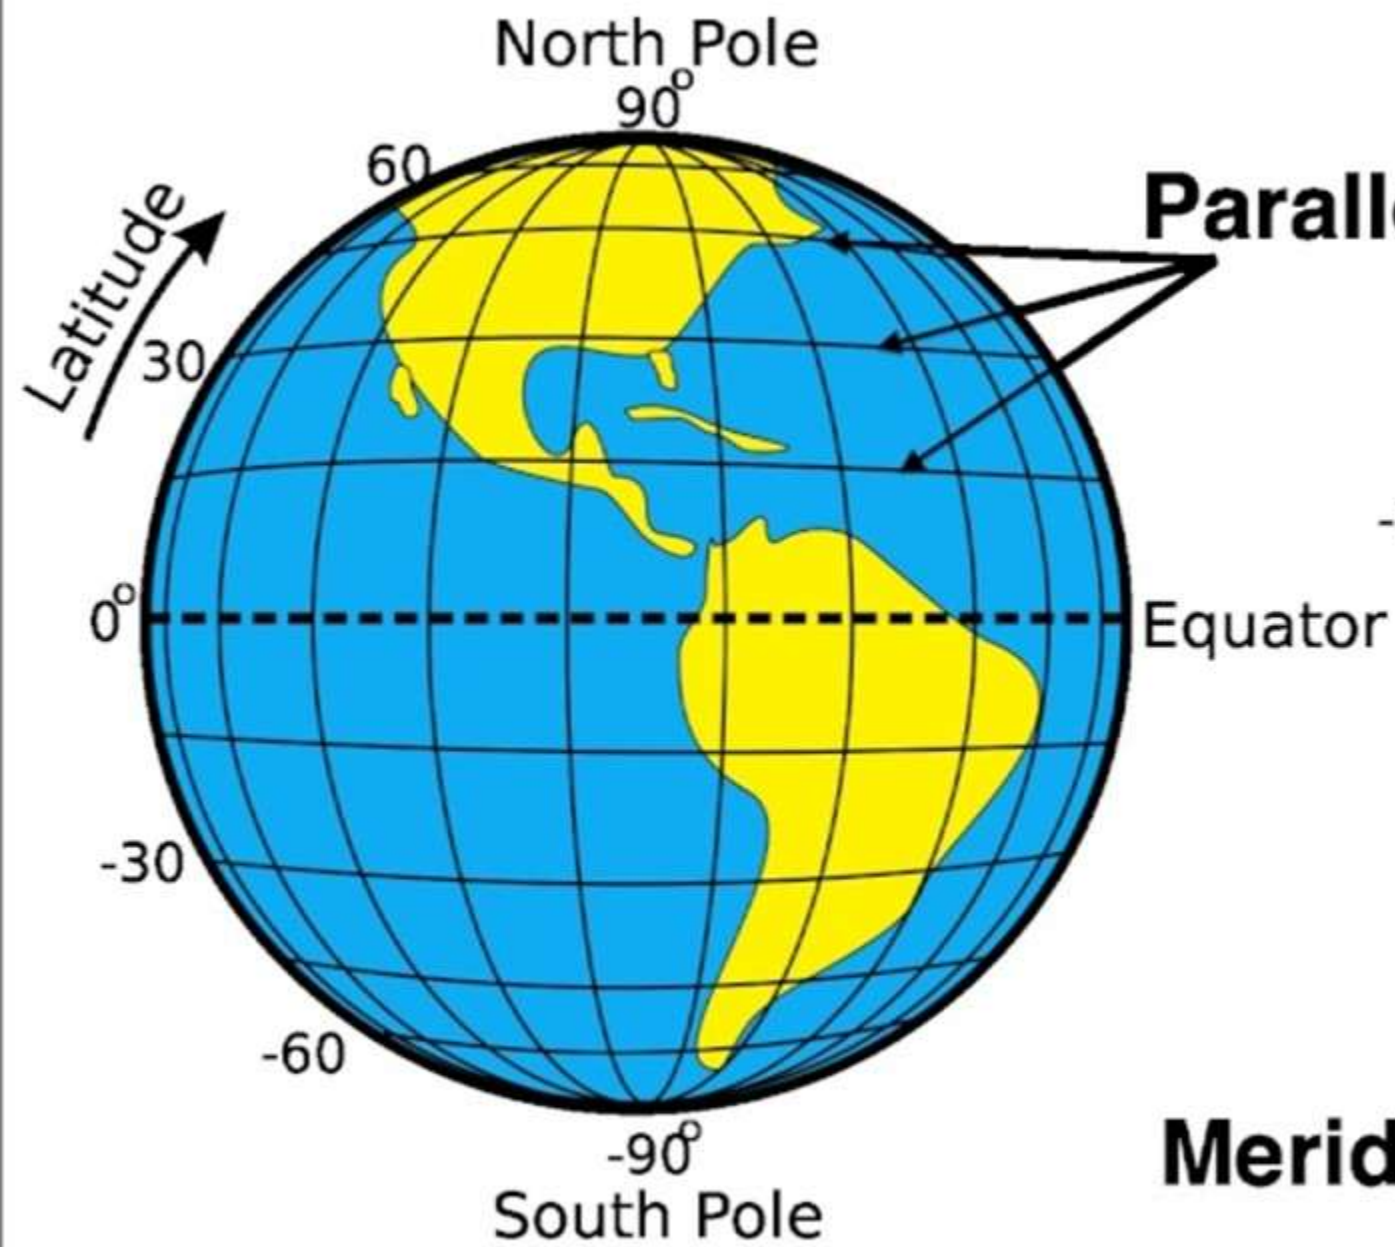

LATITUDES

- 1 They are horizontal
- 2 Their lengths are not the same
- 3 Distance between the latitudes is constant throughout with minor variations
- 4 They are measured with reference to equator
- 5 Weather conditions depend on Latitudes.

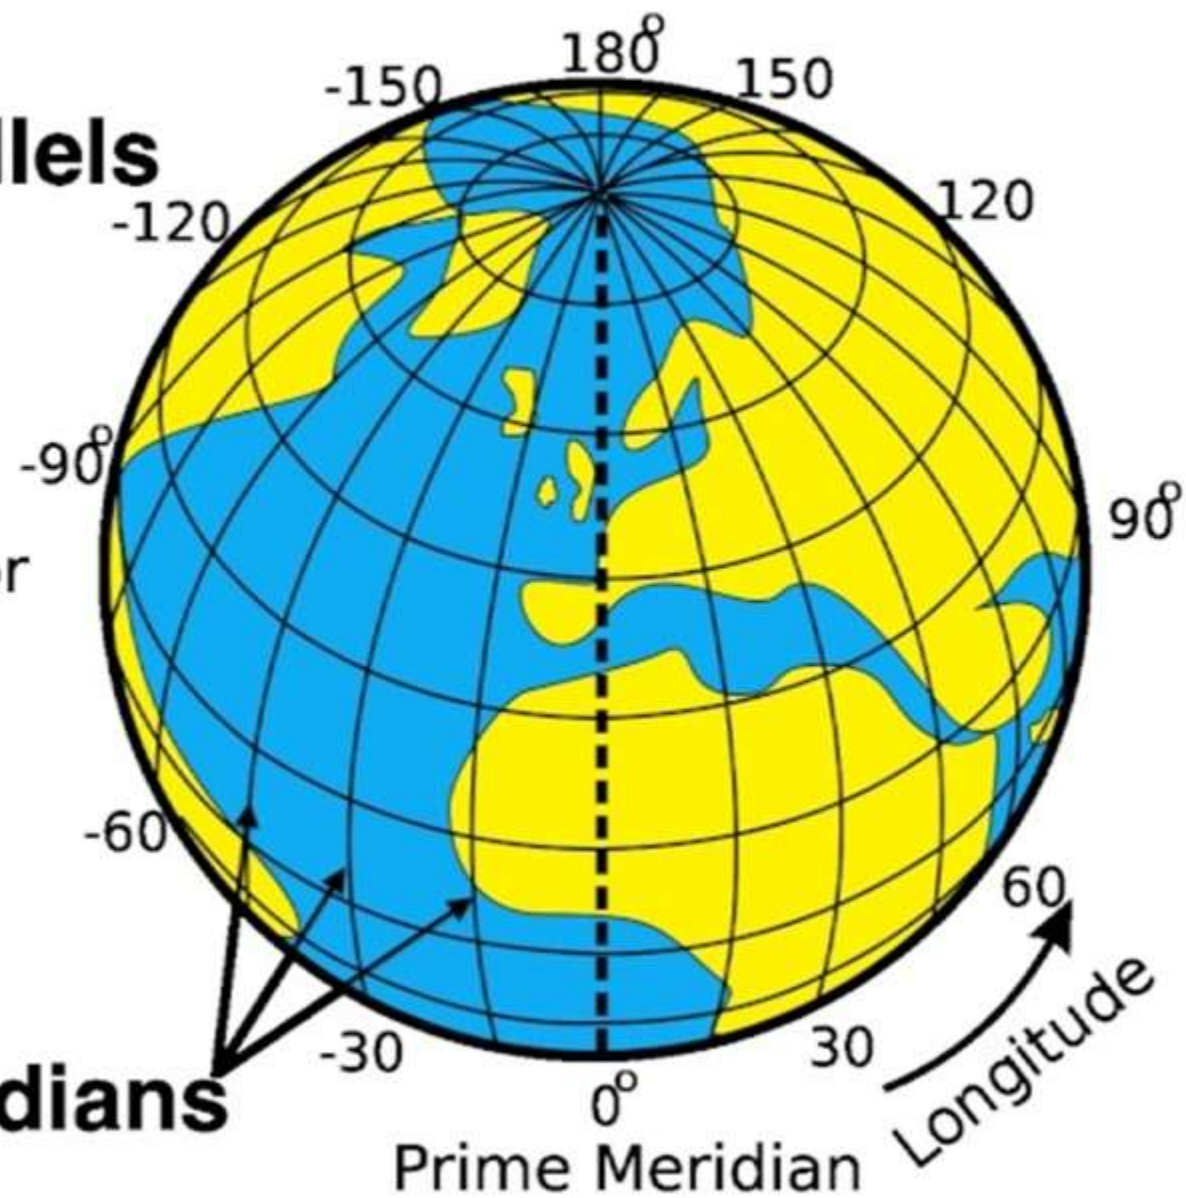

LONGITUDES

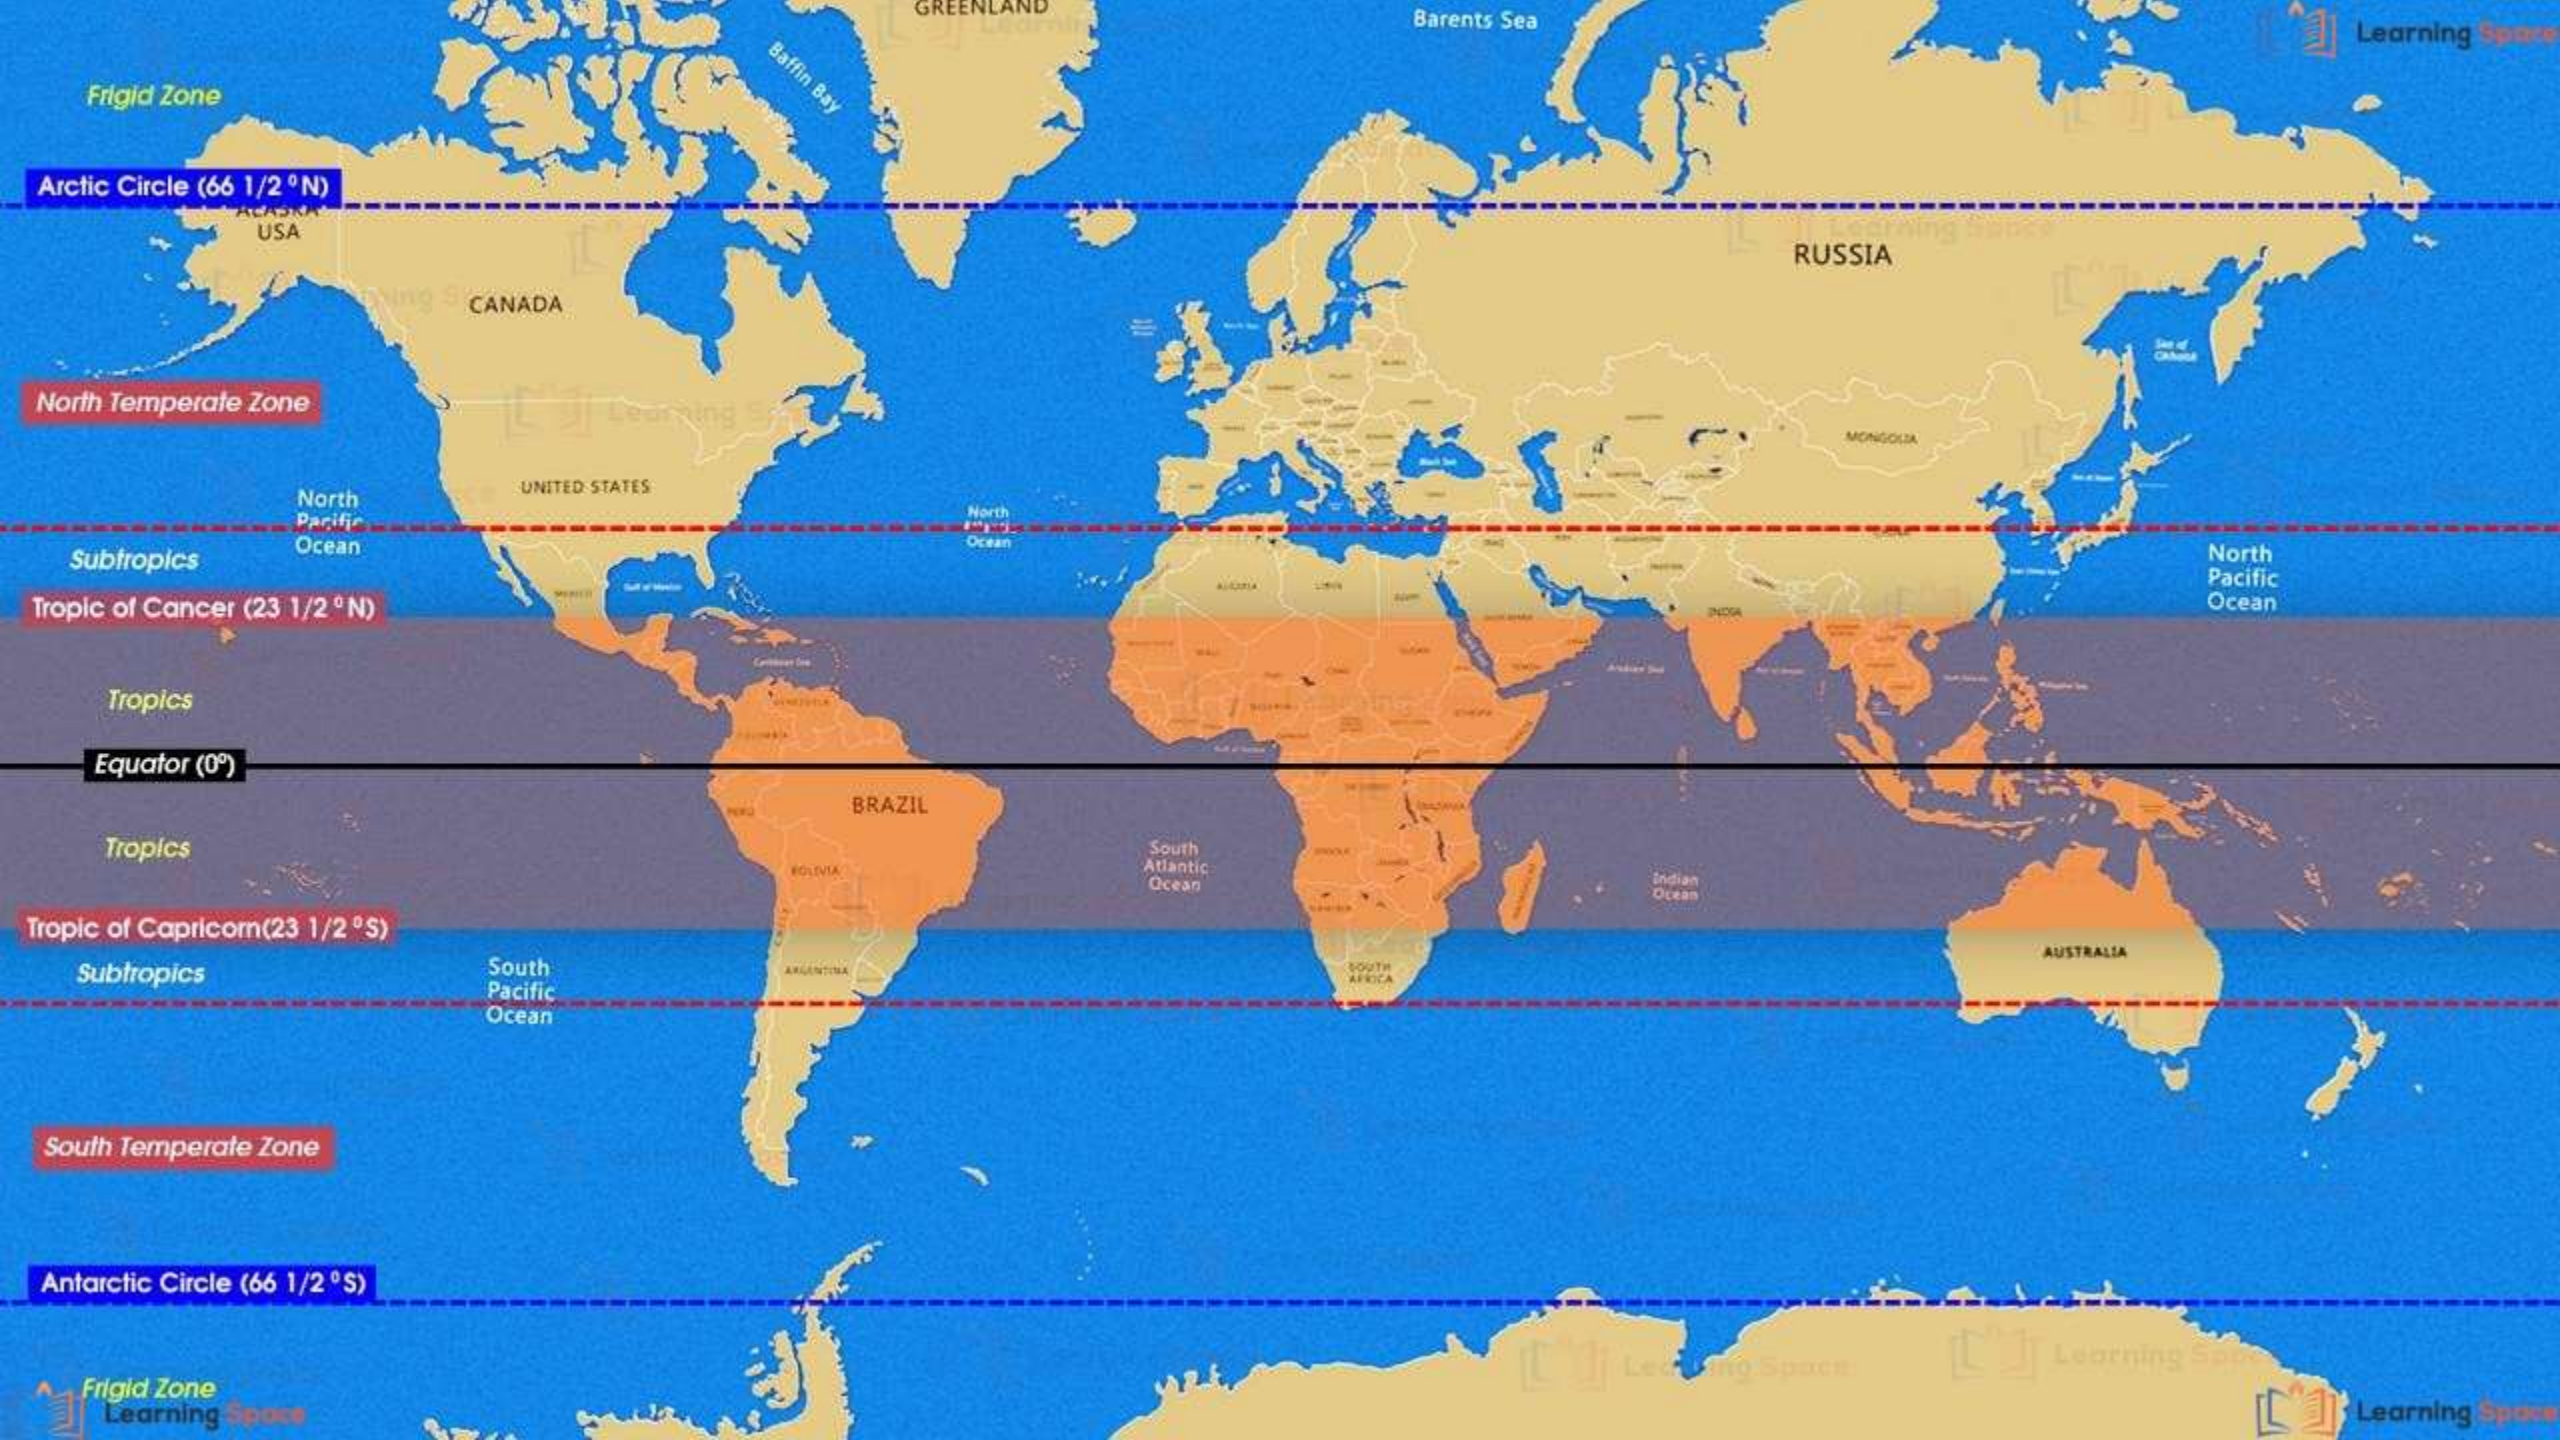

- 1 They are vertical
- 2 Their lengths are same
- 3 Distance between the longitudes is not constant , maximum at the Equator
- 4 They are measured with reference to 0 degree meridian.
- 5 Time zones depend on Longitudes

Parallels

Meridians

PRIME MERIDIAN

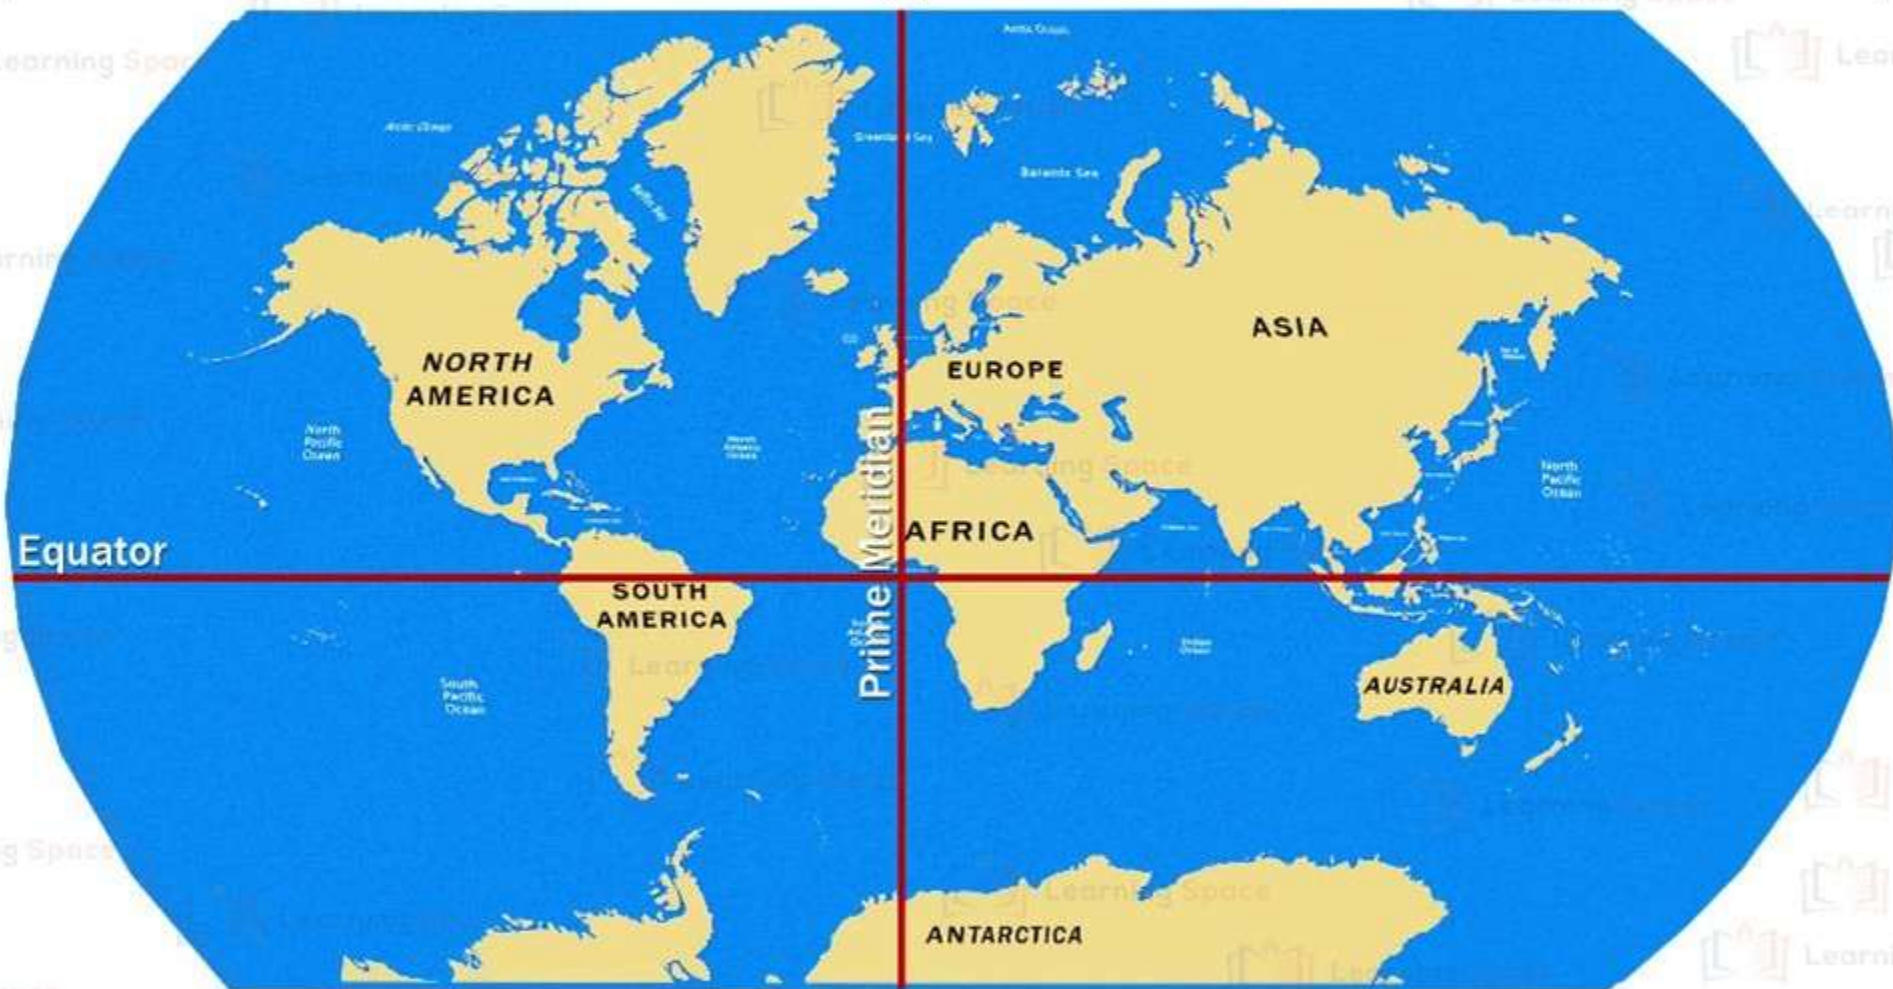

- The prime meridian is an imaginary line on Earth that passes north to south through the Greenwich Observatory in London, England.
- The prime meridian divides Earth into the Eastern Hemisphere and the Western Hemisphere.
- The prime meridian is at 0° longitude.

LATITUDES

- 1 Latitude is the angular distance of a point on the Earth's surface measured in degrees from the centre of the Earth.
- 2 It is parallel to a line, the equator which is mid-way between the poles.
- 3 The lines are called parallels of latitude.
- 4 On a globe, these are actually circles and they become smaller when we reach towards poles.
- 5 The equator represents zero degrees and the north and south poles are 90°N and 90°S .
- 6 As the Earth is slightly flattened at the poles, the linear distance of a degree of latitude at the pole is little longer than that of the equator.

WHAT DO WE INFER FROM LATITUDES?

- 1 **Latitude affects** climate by influencing the intensity of the sun in a region
- 2 The angle and duration of the sun's energy determine surface temperature
- 3 Higher **latitudes** receive less heat, but lower **latitudes** closer to the equator receive significantly more heat.
- 4 The amount of sunlight and the amount of precipitation **affects** the types of plants and animals that live in a place.

EQUATOR

CONTINENTS & COUNTRIES

1. South America

- Ecuador
- Colombia
- Brazil

2. Africa

- Sao Tome and Principe
- Gabon
- Congo
- Democratic Republic of Congo
- Uganda
- Kenya
- Somalia

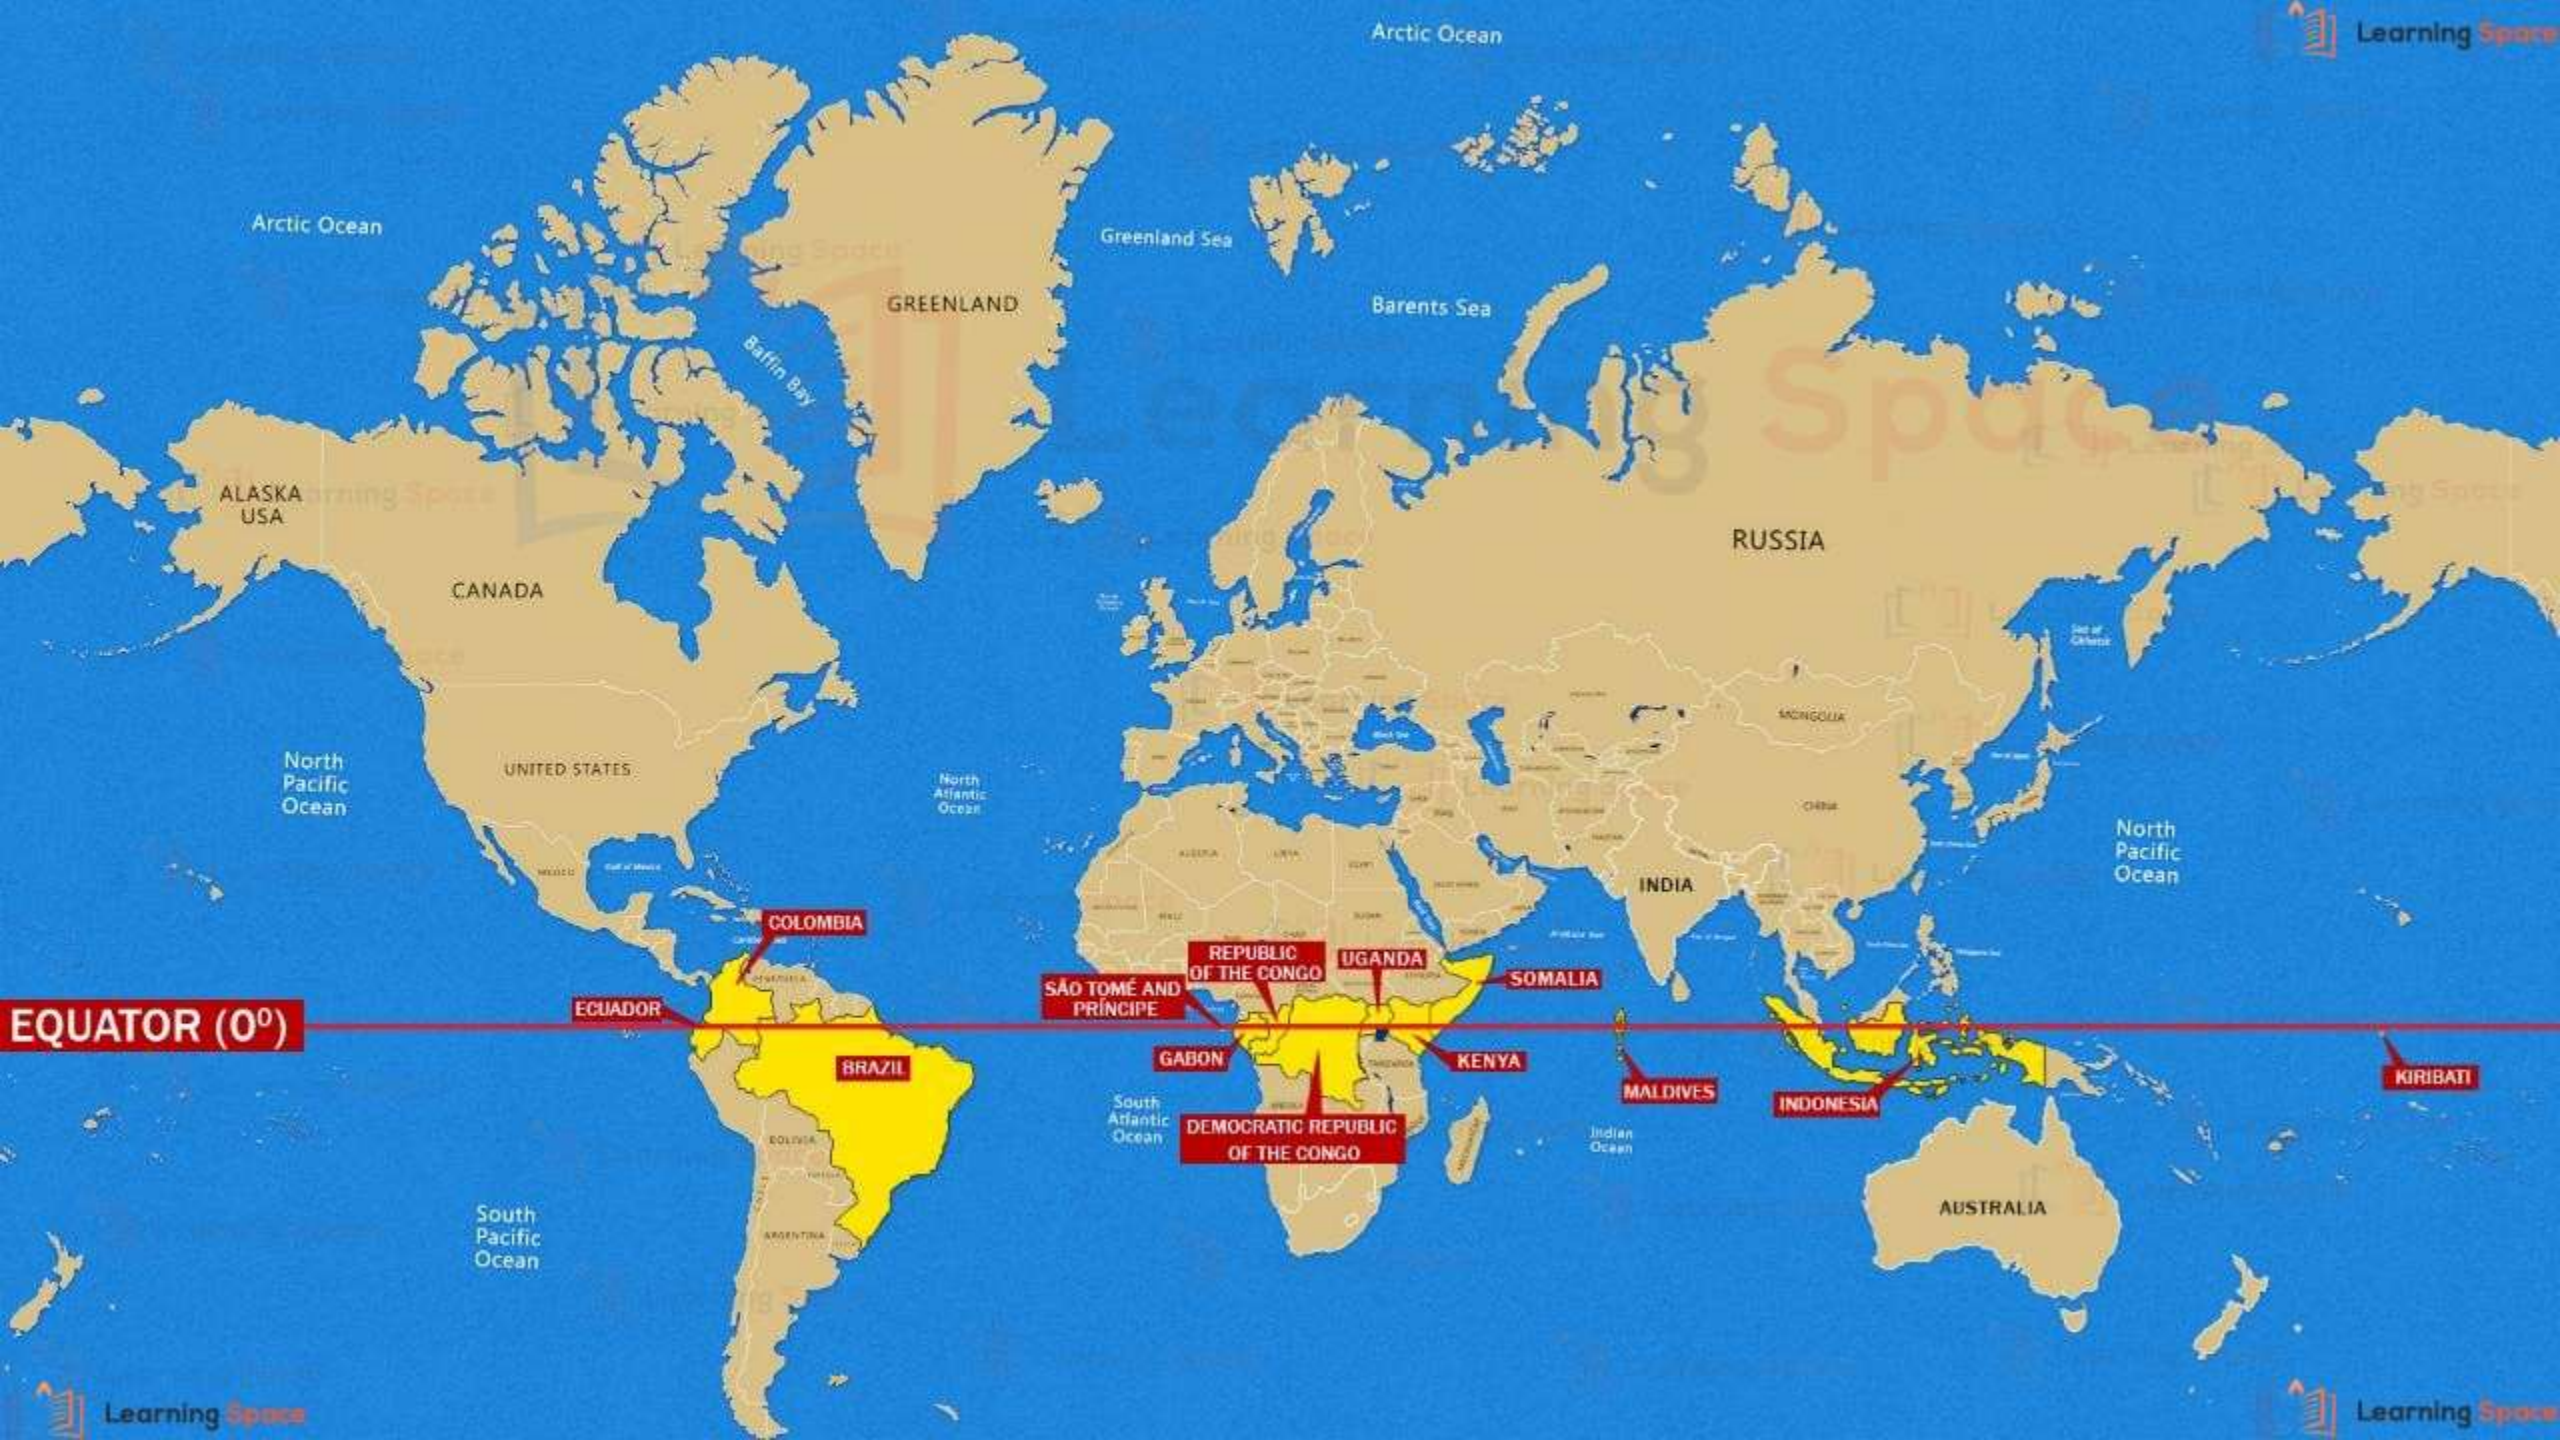

3. Asia

- Maldives
- Indonesia

4. Oceania

- Kiribati

It also passes through water bodies such as Indian Ocean, Atlantic Ocean, Pacific Ocean.

EQUATOR (0°)

COLOMBIA

ECUADOR
