

WORLD HISTORY

MODULE - 17

INDUSTRIAL REVOLUTION - 2

IMPACT OF INDUSTRIAL REVOLUTION IN ENGLAND OVER OTHER EUROPEAN COUNTRIES

- 1** Though the businesses in continental Europe languished for adopting the British Miracle, yet most of the states could not do so as early as Britain because of the political troubles.
- 2** Between 1789 till 1815, the French Revolution and Napoleonic wars kept the continental Europe plunged into political instability; the frequent wars interrupted communication, trade and caused inflation.
- 3** Thus, Industrial Revolution came to continental Europe only after a few decades and these countries could now see the gap between themselves and England.

BELGIUM

- 1 The First notable country to adopt Britain's path was Belgium. This region was rich in Iron ore, coal etc. and had fine waterways for cheap transportation.
- 2 The British workers brought here the technology and secret plans to build factories and equipments.
- 3 A British carpenter William Cockerill arrived in Belgium in 1799 and brought with himself the secret plans for building spinning machinery.
- 4 His son John Cockerill built an enormous industrial enterprise in eastern Belgium. Many more British came and established themselves in Belgium.

William Cockerill

GERMANY

- 1 Germany was a scattered empire yet some pockets of industrialization appeared in some parts such as coal rich Ruhr valley. Ruhr Valley was later called 'Miniature England' because of its similarities to the industrial areas of England.
- 2 Till 1835, Germany could not speed up the industrialization. From then onward, it started copying the British model and imported British equipment and engineers.
- 3 The German manufacturers also sent their children to England to get education on industries.
- 4 Germany built railroads linking its growing manufacturing cities, such as Frankfurt, with the Ruhr Valley's coal and iron deposits.

Soon Germany became an economic and military giant in Europe.

RUSSIA

IMPACT

4

However, it was only after Russia's 1917 Revolution that rapid industrial development started.

3

After she freed the serfs in 1861, she obtained capital from foreign countries and Russian industry moved ahead.

1

It was the last of the big European powers to have an industrial revolution.

2

She was rich in mineral resources but lacked capital and free labour.

JAPAN

- 1** It was the first country in Asia to industrialize. Traditionally, Japan produced mainly such articles as silk, porcelain and toys.
- 2** Through the Sino-Japanese and the Russo-Japanese Wars, Japan moved its industrial structure from light industry to heavy and chemical industries.
- 3** By the end of the 19th century, Japanese production included steel, machinery, metal goods and chemicals— and in quantities large enough for export.

JAPAN

4 Although Europe had played vital role as the "factory of the world," up until then, the region became a battleground when World War I broke out in 1914 and their supply of commodities declined.

5 In the meantime, Japan got amount of orders that prompted the industrial revolution of the country to progress at a rapid rate.

6 Japan became a net creditor during the war, and recognized itself as a nation based on trade.

7 In 1871 a group of Japanese politicians known as the Iwakura Mission visited Europe and the USA to learn western policies of business.

8 The result was a thoughtful state led industrialisation policy to stop Japan from falling behind.

9 The Bank of Japan, founded in 1877, used taxes to fund model steel and textile factories. Education was extended and Japanese students were sent to study in the west.

- 1 The Industrialization came up in rest of the Europe in specialized pockets rather than the entire regions.

EXAMPLE

Bohemia became specialized in Spinning Industry, Catalonia in Cotton processing, Northern Italy in silk spinning.

- 2 The country where Industrialization came very late was France. In France, the industrial growth could occur only after 1850, when the government constructed railroads.

- 3 Most of other European countries could not industrialize due to many reasons such as tough geography (Example Mountains of Austria and Hungary) and social structures.

WORLDWIDE IMPACT OF INDUSTRIALIZATION

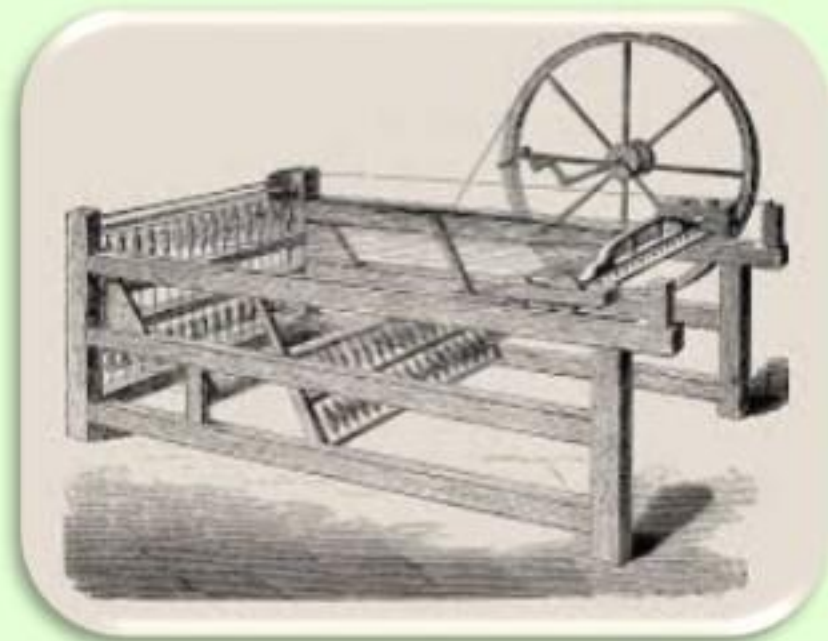

- 1 Shift in the balance of power, increased competition among the Industrialized countries.
- 2 Rise of Global Inequality, widened gap between Industrialized and non-industrialized countries, which were later known as Third world.
- 3 Less developed countries were seen as sources of raw material and markets for finished goods. The demand for raw material and look for markets led to exploitation of the colonies.
- 4 This led to a large inequality between the industrialized West and the rest of the world. A competition among industrialized countries to seize the colonies and their economic resources started.
- 5 Thus, Colonialism and Imperialism were born out of the cycle of industrialization, the development of new markets around the world, and the need for resources to supply the factories of Europe.

WORLD HISTORY

IMPACT ON INDIA

- 1** The Industrial Revolution in England impacted the nature of trade of the British in India.
- 2** In a word, the Industrial Revolution transformed India into a country that supplied raw-materials to the industrial houses of Britain.
- 3** Prior to the Industrial Revolution British traders purchased cotton piece- goods and other handicraft items from India. And used to net huge profit by selling those in the European markets.

WORLD HISTORY

IMPACT ON INDIA

4 For the manufacture of such articles huge raw-materials were needed. Thus they procured raw-materials from India at a cheap price.

5 And at the same time Britain flooded the Indian markets with the machine-made products produced in British factories.

6 With the Industrial Revolution Britain started manufacturing various articles in a short time.

URBANISATION

- The **factory system** introduced by the Industrial Revolution created **cities and urban centers**.
- In England, cities like Manchester, Birmingham, Leeds, and Sheffield arose.
- People left their **rural homes** and **gathered around** these **cities** by the hundreds and thousands in **quest of work and wages**.
- The population of Manchester increased six fold within a half century.

MACHINERY

- The introduction of power machinery rapidly increased production of goods.

INTELLECTUAL MOVEMENT

- The intellectual encouragement had also been great.
- Schools, colleges, newspapers, libraries, and the radio had been dependent on the capitalistic system for their rapid development.
- Many intellectual like Marx, St. Simon emerged as a result of the Industrial Revolution.

LARGE EMPLOYMENT

- The starting of new industries provided employment to many men and women.

NEW SOCIAL PROBLEMS

- The rapid growth of industrial cities created problems that were difficult to solve.
- Accommodation, sanitation, and health were not provided adequately.
- Sickiness and crime prevailed.
- Women and children were employed for cheap labor.
- They worked for 12 to 14 hours per day.

CAPITALISM

- The establishment of the factory system increased the amount of money in circulation.
- However, money concentrated in the hands of a few people.

CLASS DIVISION

The Industrial Revolution divided society into two distinct groups:

- 1 The rich middle class (bourgeoisie), composed of manufacturers, merchants, mine owners, bankers, and professional men.
- 2 The wage-earning class (proletariat), composed of mill workers and factory workers, on the other.

This gap between employer and employee gave rise to many economic and social problems.

GROWTH OF COLONIALISM AND IMPERIALISM

The Industrial Revolution had strengthened colonialism because the colonies were useful to obtain raw materials and sell the finished products.

So, larger territories were captured thus paving way for imperialism.

17th and 18th centuries	Radical changes in the method of agriculture in England
Changes in Agriculture	Increased food production- other farm outputs.
Industrial Revolution	Scientific inventions- new machinery and technologies- handicraft and handloom industries- faster forms of transportation
Causes	Agricultural revolution- New inventions- British entrepreneurs- Growth of capital- Colonial possessions.
Scientific Inventions	Modern clothing industry with complex machinery- invention of the steam engine- Modern transportation and business enterprises- electric telegraph- invention of telephone- invention the electric bulb- coal and iron industries
Merits	Cities and urban centres- quest of work and wages- increased production of goods- capitalistic system- employment to many men and women.
Demerits	Poor sanitation, and health- Sickness and crime- cheap labour.-more working hours- money concentrated in few people- gap between employer and employee

QUESTIONS FOR PRACTICE

1. Describe the changes that occur in means of production after Industrial Revolution.
250 words
2. Industrial Revolution changes the production relations. Comment.
150 words
3. Do you agree that Industrial Revolution was the cause of the formation of trade unions and labour unrest?
150 words
