Testing times in the Korean peninsula

Old objectives of denuclearisation and reunification have to be set aside, at least for now

RAKESH SOOD

The sixth nuclear test by North Korea on Sunday has provoked a predictable chorus of condemnation and hand wringing in capitals around the world. The test was anticipated, given the shrill rhetoric accompanying North Korea's missile tests. Yet there is little to indicate if the key countries (the U.S., China, South and North Korea and Japan) are ready to acknowledge that old policies no longer work and a new approach is needed to de-escalate tensions.

Measuring 6.3 on the Richter scale, this test indicates an explosive yield of approximately 120 kilotons, six times bigger than the Hiroshima bomb. The North Koreans described it as a successful hydrogen bomb test and also released a photograph of 'Supreme Leader' Kim Jong-un posing with a hydrogen bomb. In August, reports had appeared in the U.S. based on intelligence estimates that North Korea had succeeded in producing a miniature warhead that could be mated with its missiles.

While experts continue to debate whether North Korea has mastered the technology behind a fusion device or whether the posed picture was of a mock-up, the fact is that under Mr. Kim, the nuclear and missile programmes have accelerated. Four of the six nuclear tests have been conducted after he took over in 2011; the earlier two were conducted in 2006 and 2009. Missile development began earlier but while Kim Jong-il conducted 16 missile tests during his rule from 1994 to 2011, his son and successor

reached a height of 2,600 km and travelled a distance of 933 km, implying a range of 6,500 km to a normal trajectory, bringing mainland America within range. It was described as a 'game changer', something that U.S. President Donald Trump had vowed he would prevent by doing 'whatever was necessary'.

Trump's ballistic stand

The U.S. policy under Mr. Trump has been 'maximum pressure on North Korea' and 'engagement with China'. Since July, Mr. Trump's tweets indicate a growing impatience with China's inability to restrain North Korea. He has blamed China for increasing its trade with North Korea despite sanctions and conveyed 'disappointment' that 'they do nothing for us with North Korea, just talk'.

In August, he tweeted that North Korean threats will be met with 'fire and fury like the world has never seen'. North Korea countered with a threat to launch four missiles around Guam 'without giving it in fire', adding that 'sound the alarm to our people to be ready to

fight'. 'We do not seek a regime change, we do not seek a collapse of the regime, we do not seek an accelerated reunification of the peninsula, we do not seek an invasion to send our military north of the 38th Parallel'.

China and Russia have been critical of North Korea's missile and nuclear tests, proposing that if the U.S. and South Korea were to suspend their joint military exercises, North Korea would agree to suspend its tests, opening the way to a dialogue. This was rejected and the joint exercises took place in mid-August, as scheduled. Meanwhile, live firing drills have been taking place in the region raising the risks of a crisis erupting through miscalculation or miscommunication as North Korea prepares to celebrate its Foundation Day this week with military parades.

Nuclear crises in the past

Since 1951, this is the third nuclear crisis on the Korean peninsula. Post-Cold War, there was a thaw when the U.S. final then the

In 1993 with North Korea threatening to withdraw from the Nuclear Non-Proliferation Treaty (NPT). In Pyongyang, there was a leadership change with Kim Jong-il rising over after his father's death. The crisis was averted by direct talks with the U.S. leading to an Agreed Framework in 1994 under which North Korea suspended its decision to withdraw from the NPT, agreed to freeze its nuclear activities and in return, the U.S. pledged to build two light water nuclear power reactors.

The Clinton administration also provided more than \$800 million of food aid and humanitarian assistance. The fact that the NPT was to be extended in 1995 was undoubtedly a factor in ensuring that North Korea's withdrawal be blocked.

The Bush administration annulled the 1994 Framework Agreement (the two reactors remain unfinished), and in 2002 declared North Korea part of the 'axis of evil'. North Korea reacted by formally quitting the NPT in 2003 provoking the second crisis. China and Russia initiated the Six Party Talks in 2003 which the U.S. joined under pressure from its regional allies, Japan and South Korea. These took place in a broader context leading to the 2005 Joint Statement which reiterated the commitment to the denuclearisation of the Korean peninsula, agreed to negotiate a peace treaty to replace the 1953 armistice, provided for a U.S. security guarantee to North Korea which in turn agreed to rejoin the NPT as soon as possible. However, when the U.S. imposed new sanctions a few months later, North Korea responded with its first nuclear test in 2006 and the Six Party Talks collapsed.

Testing times in the Korean peninsula

Old objectives of denuclearisation and reunification have to be set aside, at least for now

The sixth nuclear test by North Korea on Sunday has produced a predictable storm of condemnation and hand wringing in capitals around the world. The test was a response to the United States' announcement of North Korea's missile tests. Yet there is little to indicate if the key countries (the U.S., China, South and North Korea and Japan) are ready to acknowledge that old policies no longer work and a new approach is needed to de-escalate tensions.

Regarding U.S. on the higher side, this test indicates an explosive yield of approximately 120 kilotons, six times larger than the Hiroshima bomb. The North Koreans described it as a successful hydrogen bomb test and also released a photograph of Supreme Leader Kim Jong-un posing with a hydrogen bomb. In August, reports had appeared in the U.S. based on intelligence estimates that North Korea had succeeded in producing a miniature warhead that could be mounted on missiles.

While reports continue to de-laminate whether North Korea has mastered the technology behind a fusion device or whether the posed picture was a modelling of the future plan under Mr. Kim, the nuclear and missile programmes have accelerated. Four of the six nuclear tests have been conducted after he took over in 2011; the earlier two were conducted in 2006 and 2009. Missile development began earlier but with Kim Jong-il's rule, the missile tests during his rule from 1994 to 2011 were limited to short-

GETTY IMAGES/REUTERS

range, a height of 2,000 km and travelled a distance of 600 km, in a trajectory of 6,100 km in a normal trajectory, including standard America's missile range. It was described as a 'game changer', something that U.S. President Donald Trump had vowed he would prevent by doing 'whatever was necessary'.

Trump's ballistic stand
The U.S. policy under Mr. Trump has been 'maximum pressure on North Korea' and 'engagement with China'. Since July, Mr. Trump's has indicated a growing impatience with China's inability to restrain North Korea. He has blamed China for increasing its trade with North Korea despite sanctions and conveyed 'disappointment' that 'they do nothing for us with North Korea, period'.

In August, he revealed that North Korean threats will be met with 'fire and fury like the world has never seen'. North Korea countered with a threat to launch four missiles around Guam 'until it is in fire', adding that 'South Korea is a target of our missiles'.

China and Russia have been critical of North Korea's missile and nuclear tests, proposing that it the U.S. and South Korea come to suspend their 'joint military exercises'. North Korea could agree to suspending its tests, opening the way for dialogue. This was rejected and the joint exercises took place in mid-August, as scheduled. Meanwhile, the firing drills have been taking place in the region raising the risk of a crisis erupting through miscalculation or miscommunication, as North Korea prepares to celebrate its Foundation Day this week with military parades.

Nuclear crises in the past
Since 1961, this is the third nuclear crisis on the Korean peninsula. Post-Cold War, there was a thaw when the U.S. and even the Soviet Union agreed to work together to withdraw from the NPT, agreed to freeze its nuclear activities and in return, the U.S. pledged to build two light water nuclear power reactors.

The Clinton administration also provided more than \$200 million of food aid and humanitarian assistance. The fact that the NPT was to be extended in 1995 was undoubtedly a factor in ensuring that North Korea's withdrawal be limited.

The Bush administration cancelled the 2004 Framework Agreement (the two reactor remain unfinished) and in 2002 declared North Korea part of the 'axis of evil'. North Korea reacted by abruptly quitting the NPT in 2003, preventing the second crisis. China and Russia initiated the six-party talks in 2003 which the U.S. joined under pressure from its regional allies, Japan and South Korea. These took place in a broader context leading to the 2005 Joint Statement which affirmed the commitment to the denuclearisation of the Korean peninsula, agreed to negotiate a peace treaty to replace the 1953 armistice, provided for a U.S. security guarantee to North Korea and in turn agreed to rejoin the NPT as soon as possible. However, when the U.S. imposed new sanctions a few months later, North Korea responded with its first nuclear test in 2006 and the Six Party Talks collapsed.

Resolving the issue
The Clinton administration also provided more than \$200 million of food aid and humanitarian assistance. The fact that the NPT was to be extended in 1995 was undoubtedly a factor in ensuring that North Korea's withdrawal be limited.

The Bush administration cancelled the 2004 Framework Agreement (the two reactor remain unfinished) and in 2002 declared North Korea part of the 'axis of evil'. China and Russia initiated the six-party talks in 2003 which the U.S. joined under pressure from its regional allies, Japan and South Korea. These took place in a broader context leading to the 2005 Joint Statement which affirmed the commitment to the denuclearisation of the Korean peninsula, agreed to negotiate a peace treaty to replace the 1953 armistice, provided for a U.S. security guarantee to North Korea and in turn agreed to rejoin the NPT as soon as possible. However, when the U.S. imposed new sanctions a few months later, North Korea responded with its first nuclear test in 2006 and the Six Party Talks collapsed.

Today, the situation is more complex. Moreover, Mr. Clinton's 'axis of evil' proclamation (President Xi's declaration) and the U.S. 'fire and fury' have raised the possibility of a crisis erupting through miscalculation or miscommunication, as North Korea prepares to celebrate its Foundation Day this week with military parades.

The Clinton administration also provided more than \$200 million of food aid and humanitarian assistance. The fact that the NPT was to be extended in 1995 was undoubtedly a factor in ensuring that North Korea's withdrawal be limited.

4 Testing times in the Korean peninsula

Old objectives of denuclearisation and reunification have to be set aside, at least for now.

The sixth nuclear test by North Korea on Sunday has provoked a predictable storm of condemnation and hand wringing in capitalist around the world. The two nations opposed gave President Clinton accompanying North Korea's missile tests. Yet there is little to indicate if the key countries (the U.S., C of China, South and North Korea and Japan) are ready to do knowledge that old policies no longer work and a new approach is required to keep relations from

Measuring 0.3 on the Richter scale, this quake indicates an explosive yield of approximately 120 kilotons, 40 times larger than the Hiroshima bomb. The North Koreans described it as a successful hydrogen bomb test and also released a photograph of Supreme Leader Kim Jong-il posing with a hydrogen bomb. In August, reports had appeared in the U.S. from intelligence estimates that North Korea had succeeded in producing a miniature warhead that could be mounted on missiles.

While others continue to debate whether North Korea has mastered the technology behind a fusion device or whether the posed picture was a doctored-up, the facts that under Mr. Kim, the nuclear and missile programmes have accelerated. Four of the six nuclear tests have been conducted after he took over in 2011, the latter two were conducted in 2006 and 2009. Missile development began earlier but while Kim Jong-il ruled, his missiles test during his rule from

measured a diameter of 2,900 μm and travelled a distance of 500 μm , in pulse range of 0.100 μm in a normal waveform, bringing midland America within range. It was described as a 'game changer', something that U.S. President Donald Trump had vowed he would prevent by doing 'whatever was necessary'.

Trump's ballistic stand

The U.S. policy under Mr. Trump has been "maximum pressure on North Korea" and "no negotiation with China". Since July, Mr. Trump's tweets indicate a growing impatience with China's inability to restrain North Korea. He has blamed China for increasing its trade with North Korea despite sanctions and conveyed "disappointment" that "they do nothing for us with North Korea, instead".

In August, he stressed that North Korean threats will be met with "fire and fury like the world has never seen". North Korea countered with a threat to launch five missiles around Guam "without opening a fire", adding that "sound judgment" would be used to "prevent escalation".

said, "We do not seek a regime change, we do not seek a refusal of the regime, we do not seek an accelerated dismantling of the peninsula, we do not seek an excuse to send our military north of the 38th parallel."

China and Russia have been critical of North Korea's nuclear and missile test, proposing that the U.S. and South Korea were to suspend their joint military exercises. North Korea could agree to suspending its tests, opening the way for dialogue. "This was a signal and the other countries took place in and began," he concluded. Meanwhile, the long delay have been taking place in the region raising the risks of a crisis erupting through miscalculation or miscommunication. As North Korea prepares to celebrate its Foundation Day this week with military exercises.

Nuclear crises in the past
Since 1963, this is the third nuclear crisis on the Korean peninsula. Post-World War, there was a time when the U.S. and then the Soviet Union were in a nuclear arms race.

In 1993 with North Korea threatening to withdraw from the Nuclear-Security Cooperation Treaty (NST), in Pyongyang, there was a leadership change with Kim Jong Il taking over after his father's death. The ties were severed by direct talks with the U.S. leading to the Agreed Framework in 1994 under which North Korea suspended its decision to withdraw from the NST, agreed to freeze its nuclear activities and in return, the U.S. pledged to build two light water nuclear power reactors.

The Clinton administration also provided more than \$200 million of food aid and humanitarian assistance. The fact that the NPT was to be extended in 1993 was undoubtedly a factor in ensuring that North Korea's withdrawal be finalized.

The Bush administration cancelled the 2004 Framework Agreement, but the two reactors remain on hold. And in 2002, declared

North Korea's part of the 1998 in effect. North Korea reacted by sharply curtailing the NPT in 1993, provoking the economic crisis. China and South Korea initiated the Six-Party Talks in 2003, which the U.S. joined after the pressure of the international community, Japan and South Korea. Thereafter, the U.S. and North Korea have been negotiating the 1994 Agreed Framework, leading to the 2006 Joint Statement of the U.S. and North Korea, the commitment to the denuclearization of the Korean peninsula, agreed to sign, after a peace treaty to replace the 1953 armistice, provided for a U.S. security guarantee to North Korea within 18 months agreed to rejoin the NPT as soon as possible. However, when the U.S. imposed new sanctions a few months later, North Korea responded with its first nuclear test in 2006 and the Six Party Talks collapsed.

IMPORTANT INFORMATION ON THE NUCLEAR TESTS

- 1 The recent nuclear test is measured 6.3 on Richter scale.
- 2 It indicates an explosive yield of approximately 120 kilo tonnes.
- 3 It is 6 times bigger than the Hiroshima Bomb.
- 4 In August, reports appeared in US based on intelligence estimates that North Korea had succeeded in producing a miniaturised warhead that could be made with its missiles.

4

Testing times in the Korean peninsula

Old objectives of denuclearisation and reunification have to be set aside, at least for now

The sixth nuclear test by North Korea on Sunday has produced a predictable flurry of condemnation and hand-wringing in capitals around the world. The test was a response to the United States' resumption of North Korea's missile tests. Yet there is little to indicate if the key countries (the U.S., China, South and North Korea and Japan) are ready to acknowledge that old policies no longer work and a new approach is needed to de-escalate tensions.

Measuring 6.3 on the Richter scale, this test indicates an explosive yield of approximately 120 kilotons, six times larger than the Hiroshima bomb. The North Koreans described it as a successful hydrogen bomb test and also released a photograph of Supreme Leader Kim Jong-un posing with a hydrogen bomb. In August, reports had appeared in the U.S. based on intelligence estimates that North Korea had succeeded in producing a miniature warhead that could be mounted on missiles.

While reports continue to debate whether North Korea has mastered the technology behind a fusion device or whether the posed picture was a modelling exercise, the test under Mr. Kim, the nuclear and missile programmes have accelerated. Four of the six nuclear tests have been conducted since he took over in 2011; the earlier two were conducted in 2006 and 2009. Missile development began earlier but with Kim Jong-il running the missile test during his rule from 1994 to 2011.

released a missile of 2,000 km and travelled a distance of 600 km, in a payload range of 6,100 km in a normal trajectory, including mainland America within range. It was described as a 'major danger', some three days U.S. President Donald Trump had vowed he would prevent 'by any means necessary'.

Trump's ballistic stand
The U.S. policy under Mr. Trump has been 'maximum pressure on North Korea' and 'engagement with China'. Since July, Mr. Trump's two, it indicates a growing impatience with China's inability to restrain North Korea. He has blamed China for increasing its trade with North Korea despite sanctions and conveyed 'disappointment' that 'they do nothing for us with North Korea, just sell'.

In August, he received that North Korea threats will be met with 'fire and fury like the world has never seen'. North Korea countered with a threat to launch four missiles around Guam 'without warning in five', adding that 'fourth' missile would be a 'big surprise'.

China and Russia have been critical of North Korea's missile and nuclear tests, proposing that if the U.S. and South Korea were to suspend their joint military exercises, North Korea could agree to suspend its tests, opening the way for dialogue. This was rejected and the joint exercises took place in mid-August, as scheduled. Meanwhile, the firing drills have been taking place in the region raising the risk of a crisis erupting through miscalculation or miscommunication, as North Korea prepares to celebrate its Foundation Day this week with military parades.

Nuclear crises in the past
Since 1961, this is the third nuclear crisis on the Korean peninsula. Post-Cold War, there was a thaw when the U.S. and even the Soviet Union agreed to withdraw from the peninsula. In 1993 with North Korea threatening to withdraw from the Nuclear Non-Proliferation Treaty (NPT), in Pyongyang, there was a leadership change with Kim Jong-il taking over after his father's death. The crisis was averted by direct talks with the U.S. leading to an Agreed Framework in 1994 under which North Korea suspended its decision to withdraw from the NPT, agreed to freeze its nuclear activities and in return, the U.S. pledged to build two light-water nuclear power reactors.

The Clinton administration also provided more than \$400 million of food aid and humanitarian assistance. The fact that the NPT was to be extended in 1995 was undoubtedly a factor in ensuring that North Korea's withdrawal be limited.

The Bush administration announced the 2004 Framework Agreement that the two nations remain unfriendly, and in 2002 declared North Korea part of the 'axis of evil'. North Korea reacted by abruptly quitting the NPT in 2003, provoking the second crisis. China and South Korea mediated the six-party talks in 2003 which the U.S. joined under pressure from its regional allies, Japan and South Korea. These took place in a broader context leading to the 2006 Joint Statement which affirmed the commitment to the denuclearisation of the Korean peninsula, agreed to negotiate a peace treaty to replace the 1953 armistice, provided for a U.S. security guarantee to North Korea which in turn agreed to rejoin the NPT as soon as possible. However, when the U.S. imposed new sanctions a few months later, North Korea responded with its first nuclear test in 2006 and the Six Party Talks collapsed.

Resolving the issue
The Clinton administration's approach was to engage North Korea through dialogue and incentives. The Bush administration's approach was to isolate North Korea through sanctions and threats. The Obama administration's approach was to engage North Korea through dialogue and incentives, but with a focus on denuclearisation. The Trump administration's approach is to impose maximum pressure on North Korea to achieve denuclearisation.

ACCELERATION OF NUCLEAR AND MISSILE PROGRAMS UNDER KIM JONG-UN

1 Four out of the six nuclear tests have been conducted after Kim Jong-un took over in 2011, the earlier two were in 2006 and 2009.

2 Missile development began earlier, but Kim Jong-un accounted for 80 missile tests, where as Kim Jong-il conducted 16 missile tests between 1994 and 2011.

3 North Korea's fissile material stockpile is enough for 25 nuclear devices.

HWASONG-14

- 1 On July 4th, North Korea tested Hwasong-14 described as Intercontinental Ballistic Missile.
- 2 It is tested on a lofted trajectory, which reached a height of 2,800 km and travelled a distance of 933 km.
- 3 It implies a range of 6,500 km in a normal trajectory.

1953 ARMISTICE AGREEMENT AND SUBSEQUENT DEVELOPMENTS

- 1** The Armistice agreement in 1953, was signed by North Korea, China and US representing the UN command.
- 2** It is to be followed by Peace Treaty, which remains pending.
- 3** South Korea and North Korea do not recognise each other. North Korea considers the South under US occupation, while South Korea considers the entire peninsula as its territory.
- 4** In 1991, both the Koreas were simultaneously admitted to the UN.
- 5** China looking for investment and technology pragmatically recognised South Korea in 1992, much to North Korea's annoyance.

NORTH KOREA AND DEVELOPMENTS SINCE 1990s

LIVE

- 1** Regime acceptance and regime survival have been key priorities for North Korea, since the collapse of the Soviet Union.
- 2** In 1992, a positive move was the withdrawal of tactical nuclear weapons from the Korean Peninsula and suspension of Team Spirit, the joint U.S-South Korean military exercises.
- 3** This led to the Basic Agreement on Reconciliation, Non-Aggression and Exchanges and Cooperation.
- 4** However, in 1993, when joint exercises were resumed, North Korea announced its decision to withdraw from the Nuclear Non-Proliferation Treaty (NPT).
- 5** However, North Korea was persuaded to suspend its decision to withdraw from the NPT.
- 6** North Korea also agreed to freeze its nuclear activities, and in return, the U.S. pledged to build two light water nuclear power reactors.
- 7** Food aid and humanitarian assistance was provided by the Clinton administration from 1995 till 2000 was close to \$ 800 million.

WHAT WENT WRONG SINCE 2000?

- 1** The Bush administration declared North Korea as part of the 'Axis of Evil' in 2002.
- 2** It also cancelled direct talks and annulled 1994 agreement.
- 3** North Korea responded by throwing out International Atomic Energy Agency inspectors and formally leaving the Non-Proliferation Treaty, thereby provoking a fresh crisis.
- 4** China and Russia initiated Six Party Talks in 2003, which led to the 2005 joint statement, which expanded the scope to more than the nuclear issue.
- 5** However, the talks collapsed when the U.S. imposed sanctions a few months later.
- 6** North Korea responded with its first nuclear test in 2006.

IAEA

International Atomic Energy Agency

Muammar Gaddafi

Saddam Hussein

NUCLEAR WEAPONS ... IS IT AN INSURANCE OR MADNESS?

- 1 In 2003, Gaddafi gave up his nuclear ambitions in return for diplomatic normalisation. Finally he was shot by rebels backed by his new western allies.
- 2 Saddam Hussein gave up his own Weapons of Mass Destruction programme and met the similar fate in 2006.
- 3 North Korean leaders also watched the fate of Ukraine, which gave up its nuclear weapons in 1994 after receiving security guarantee from US, UK and Russia.

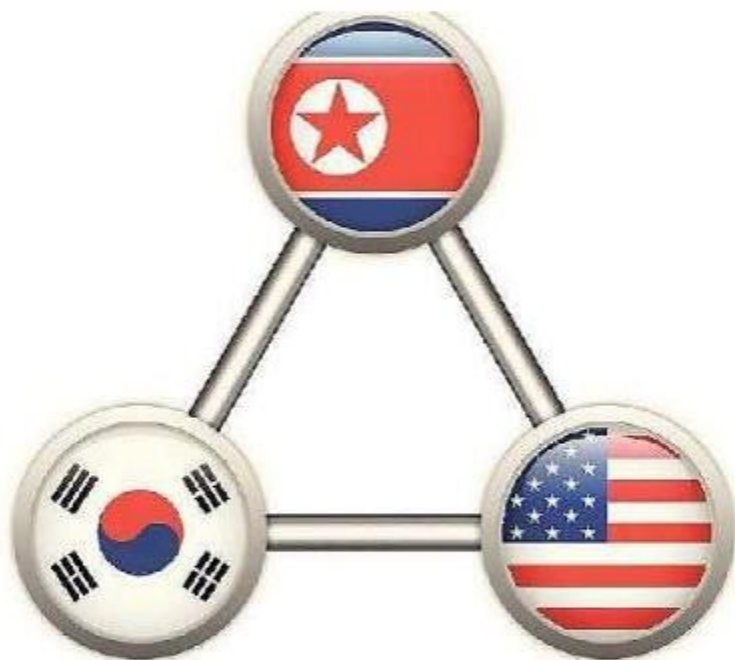

So North Korea feels that getting a bomb is not madness but life insurance for the country.

WHAT IS THE WAY OUT

- 1** The old objectives of denuclearisation and reunification will not work and they have to be set aside.
- 2** North Korea's nuclear capability has to be accepted. Mutual recognition have to precede reunification and for this the two Koreas need to begin a dialogue in due course.
- 3** Managing this requires closer understanding between US and South Korea than is currently on display.

For Mr Kim the Stakes are existential and parallel negotiations on political and nuclear tracks are needed, if the current crisis is to be averted.
