AGRICULTURE

MODULE - 10

- **Primary activities** include all those connected with extraction and production of natural resources.
 - Agriculture, fishing and gathering are good examples.
- **Secondary activities** are concerned with the processing of the resources.
 - Manufacturing of steel, baking of bread and weaving of cloth are examples of this activity
- **Tertiary activities** provide support to the primary and secondary sectors through services.
 - Transport, trade, banking, insurance and advertising are examples of tertiary activities.

- Agriculture is a primary activity.
- It includes growing of crops, fruits, vegetables, flowers and rearing of livestock.
- In the world, 50 per cent of persons are engaged in agricultural activity.
- Two-thirds of India's population is still dependent on agriculture.
- The land on which the crops are grown is known as **Arable Land**.

Agriculture

The science and art of cultivation on the soil, raising crops and rearing livestock.

Sericulture

Commercial level production of silk.

Pisciculture

Controlled breeding and rearing of fish, especially in constructed tanks and ponds.

Viticulture

Cultivation of grapes.

Horticulture

Growing vegetables, flowers and fruits for commercial use.

Apiculture

Raising of bees for commercial purpose.

Aquaculture

Rearing of aquatic animals or plants for food.

Floriculture

Cultivation of flowers.

Mariculture

Rearing of fish or other marine life for food.

Silviculture

Commercial cultivation of trees.

**TYPES OF FARMING****I. Subsistence Farming**

Traditionally, low levels of technology and household labour are used to produce on small output.

**II. Commercial Farming**

The area cultivated and the amount of capital used is large in this type of farming.

TYPES OF FARMING

I. Subsistence Farming

Intensive Subsistence Farming

- Dominated by wet Paddy cultivation.
- Dominated by crops other than Paddy.

Primitive Subsistence Farming

II. Commercial Farming

- Mixed Farming.
- Plantation Agriculture.
- Extensive Commercial Grain Farming.
- Mediterranean Agriculture.
- Dairy Farming

TYPES OF FARMING

I. SUBSISTENCE FARMING

Intensive Subsistence Farming

(i) **Dominated by wet paddy cultivation:** This type of agriculture is characterised by dominance of the rice crop.

- Land holdings are very small due to the high density of population.
- Farm yard manure is used to maintain the fertility of the soil.

(ii) **Dominated by crops other than paddy:**

- Most of the characteristics of this type of agriculture are similar to those dominated by wet paddy except that irrigation is often used.
- Wheat, soyabean, barley and sorghum are grown in northern China, Manchuria, North Korea and North Japan.
- In India wheat is grown in western parts of the Indo-Gangetic plains and millets are grown in dry parts of western and southern India.

TYPES OF FARMING

I. SUBSISTENCE FARMING

Primitive Subsistence Farming

- Primitive subsistence agriculture is widely practised by many tribes in the tropics, especially in Africa, Asia, south and central America.
- The vegetation is usually cleared by fire and the ashes add to the fertility of the soil.
- Shifting cultivation is thus, also called slash and burn agriculture.
- The cultivated patches are very small and cultivation is done with very primitive tools such as sticks and hoes.
- After sometime (3 to 5 years) the soil loses its fertility and the farmer shifts to another part and clears other patch of the forest for cultivation.

TYPES OF FARMING

Nomadic Herding

- Nomadic herding, or **nomadic pastoralism**, is a practice that entails moving from one place to another with cattle in search of pasture.
 - Pastoral nomads sell their animals to get products that they don't produce, and they also depend on the animals for food.
 - Herders often specialize in a particular type of livestock.
 - Shepherds, for instance, herd and tend to flocks of sheep. Goatherds tend to goats, and swineherds to pigs and hogs.
-
- Each nomadic community occupies a well-identified territory as a matter of tradition.
 - In tropical Africa - Cattle are the most important livestock.
 - In Sahara and Asiatic deserts - Sheep, Goats and Camel are reared.
 - In the mountainous areas of Tibet and Andes - Yak and Llamas are reared
 - In the Arctic and sub Arctic areas - Reindeer are the most important animals.

TYPES OF FARMING

II. COMMERCIAL FARMING

Plantation Agriculture

- Plantation agriculture was introduced by the Europeans in colonies situated in the tropics.
- Some of the important plantation crops are tea, coffee, cocoa, rubber, cotton, oil palm, sugarcane, bananas and pineapples.

➤ Characteristic features:

- These are large estates or plantations.
- Require large capital investment, managerial and technical support, scientific methods of cultivation.
- It has single crop specialisation, cheap labour, and a good system of transportation which links the estates to the factories and markets for the export of the products.

TYPES OF FARMING

II. COMMERCIAL FARMING

Extensive Commercial Grain Farming

- Commercial grain cultivation is practised in the interior parts of semi-arid lands of the midlatitudes.
- Wheat is the principal crop, though other crops like corn, barley and oats are also grown.
- The size of the farm is very large, therefore entire operations of cultivation from ploughing to harvesting are mechanized.

TYPES OF FARMING

II. COMMERCIAL FARMING

Mixed Farming

- ✓ Mixed farming is characterised by high capital expenditure on farm machinery and building, extensive use of chemical fertilisers and green manures and also by the skill and expertise of the farmers.
- ✓ Mixed farms are moderate in size and usually the crops associated with it are wheat, barley, oats, maize, fodder and root crops.
- ✓ Fodder crops are an important component of mixed farming.
- ✓ Crop rotation and intercropping play an important role in maintaining soil fertility.

TYPES OF FARMING

II. COMMERCIAL FARMING

Mediterranean Agriculture

- It is highly specialized commercial agriculture.
 - This region is an important supplier of citrus fruits.
-
- Viticulture is a speciality of the Mediterranean region.
 - The inferior grapes are dried into raisins and currants.
 - The advantage of Mediterranean agriculture is that more valuable crops such as fruits and vegetables are grown in winters when there is great demand in European and North American markets.

TYPES OF FARMING

II. COMMERCIAL FARMING

Dairy Farming

- Dairy is the most advanced and efficient type of rearing of milch animals.
 - It is highly capital intensive.
 - Animal sheds, storage facilities for fodder, feeding and milching machines add to the cost of dairy farming.
 - Special emphasis is laid on cattle breeding, health care and veterinary services.
 - It is practised mainly near urban and industrial centres which provide neighbourhood market for fresh milk and dairy products.
 - The development of transportation, refrigeration, pasteurisation and other preservation processes have increased the duration of storage of various dairy products.
-
- There are three main regions of commercial dairy farming.
 - The largest is North Western Europe the second is Canada and the third belt includes South Eastern Australia, New Zealand and Tasmania.

TYPES OF FARMING

Co-operative Farming

- ✓ A group of farmers form a co-operative society by pooling their resources voluntarily for more efficient and profitable farming.
- ✓ Co-operative societies help farmers, to procure all important inputs of farming, sell the products at the most favourable terms and help in processing of quality products at cheaper rates.
- ✓ Co-operative movement has been successful in many western European countries like Denmark, Netherlands, Belgium, Sweden, Italy etc.

Collective Farming

- ✓ It is when a group of farmers pool their land, domestic animals, and agricultural implements, retaining as private property enough only for the members' own requirements.
- ✓ Yearly targets are set by the government and the produce is also sold to the state at fixed prices.
- ✓ Collective farming was introduced in erstwhile Soviet Union.

Market Gardening

- ✓ A market garden is relatively small-scale production of fruits, vegetables and flowers as cash crops, frequently sold directly to consumers and restaurants.
- ✓ It is a modern type of agriculture developed mainly on the fringe of highly industrialised and densely populated urban areas.
- ✓ Vegetables, fruits, milk, eggs, meat etc., are the important products produced.
- ✓ Its also called **truck farming**.

Horticulture

- ✓ It is growing flowers and non-edible plants on a large scale.
- ✓ Horticulture is the art and science of growing and handling fruits, nuts, vegetables, herbs, flowers, foliage plants, woody ornamentals, and turf.
- ✓ Horticulture is the cultivation of plant for products like flowers, fruits, etc.
- ✓ Horticulture enriches diets.

MAJOR CROPPING SEASONS IN INDIA

SEASON	TIME PERIOD	CROPS	STATES
RABI	Sown: Oct – Dec. Harvested: Apl - Jun	Wheat, Barley, Peas, Gram and Mustard.	Punjab, Haryana, Himachal Pradesh, Jammu and Kashmir, Uttarakhand and Uttar Pradesh
KHARIF	Sown: Jun - Jul Harvested: Sept - Oct	Rice, Maize, Jowar, Urad, Groundnut, Soyabean and Cotton.	Tamilnadu, Andhra Pradesh, Bihar, Assam, West Bengal, Kerala and Maharastra.
ZAID	Sown & Harvested: Mar - Jul	Cucumber, Pumpkin, Bitter Gourd and Watermelon.	Most of the northern and northern western states.

MAJOR CROPS

Food Grains

Cereals

Fine Grains

- Rice
- Wheat

Coarse Grains

- Jowar
- Bajra
- Maize
- Ragi

Pulses

Food Crops other than Grains

Oil Seeds

- Groundnut
- Mustard & Rapeseed

Horticulture

- Flowers
- Fruits
- Nuts
- Vegetables
- Herbs

Other Crops

- Tea
- Coffee
- Sugarcane

Non-Food Crops

Fiber Crops

- Cotton
- Jute
- Silk

Other Crops

Rubber

GREEN REVOLUTION

- Green revolution refers to the **introduction of High yielding variety (HYV) of seeds and increased use of fertilizer and irrigation methods.**
- It took place during the 1960s.
- The 3 basic elements in the method of green revolution are:
 - Continued expansion of farm areas.
 - Double cropping existing farm land.
 - Using seeds with improved yields.

MAJOR AGRICULTURAL REVOLUTIONS

- Green** Revolution : Cereals, wheat and leguminous plants
- White** Revolution : Milk and dairy products
- Silver** Revolution : Egg and poultry
- Yellow** Revolution : Edible oil
- Blue** Revolution : Fishery
- Pink** Revolution : Prawns/Meat processing
- Golden** Revolution : Honey
- Golden Fibre** Revolution : Jute
- Silver Fibre** Revolution : Cotton

PROBLEMS OF INDIAN AGRICULTURE

- Non-Implementation of Government Policies.
- Lack of Modernization and Mechanization.
- Illiteracy.
- Ignorance.
- Lack of Funds.
- Poor Infrastructure
- Absence of Modern Storage/Processing Facilities.
- Loss of Land to Natural Disaster.

MEASURES

- Implementation of Land Reforms
- Integrated Management of Land and Water Resources
- Supplying Improved Seeds
- Improving Irrigation facilities
- Provision of Credit and Marketing Facilities
- Awareness on government programs
