**LOOK AT THE
COORDINATES!**

**ON SIMILAR LINES WE CAN
FIND LOCATION ON EARTH!**

HAVE A GLANCE AT PARALLELS AND MERIDIANS!

LET US LOOK AT THE DIFFERENCES BETWEEN THESE VERTICAL AND HORIZONTAL LINES!

LATITUDES

They are horizontal.

Their lengths are not the same.

Distance between Latitudes is constant throughout with minor variations.

They are measured with reference to **Equator**.

Weather conditions depend on Latitudes.

LONGITUDES

They are vertical.

Their lengths are the same.

Distance between the Longitudes is not constant, maximum at the Equator.

They are measured with reference to **Prime Meridian**.

Time zones depend on Longitudes.

LET US VIEW INDIA THROUGH THESE PARALLELS AND MERIDIANS!

IMPORTANT PARALLELS OF LATITUDE

HEAT ZONES OF THE EARTH ... DEPENDS ON THESE PARALLELS!

**SOLSTICES AND EQUINOXES ...
BASED ON THE EARTH'S
CEASELESS MOTION IN ORBIT!**

Solstice: It is an event in which a planet's poles are most extremely inclined toward or away from the star it orbits.

Tilt of earth's axis 23.4°

TILT OF EARTH MADE ALL THE DIFFERENCE!
