

IAS PRELIMS 2020

TERMINOLOGY ...

FOR CRYSTAL CLEAR CLARITY

ECO & ENVI - I

MODULE - 3

IMPORTANT TERMINOLOGY

ECO & ENVI

1

ANTHROPOGENIC

2

MITIGATION IN CLIMATE
CHANGE

3

ADAPTATION IN CLIMATE
CHANGE

4

CARBON FOOTPRINT

5

CONSERVATION

6

SUSTAINABILITY

7

GEO-ENGINEERING

8

ECO-TOURISM

9

ENDANGERED SPECIES

10

BIOLOGICAL CONTROL

1

ANTHROPOGENIC

- ◆ Anything caused by humans, especially in relation to climate change and global warming.
- ◆ **Example:** A series of environmental and anthropogenic events destroyed the bison in North America. The destruction of the bison was not merely the result of human agency, but the consequence of the interaction of human societies with a dynamic environment.

2

MITIGATION IN CLIMATE CHANGE

- ◆ It involves reducing the flow of heat-trapping greenhouse gases into the atmosphere.
- ◆ It may be by reducing the burning of fossil fuels or by generating power from renewable sources.
- ◆ It is also by enhancing the “sinks” that accumulate and store these gases, such as the oceans, forests and soil.

The goal of mitigation is to avoid significant human interference with the climate system.

+

3

ADAPTATION IN CLIMATE CHANGE

- ◆ It seeks to lower the risks posed by the consequences of climatic changes.
- ◆ Adaptation describes, what should be done to improve the capacity of the people to live in a warmer World.
- ◆ These are the practical steps to protect countries and communities from the likely disruption and damage that will result from the effects of climate change.

4

CARBON FOOTPRINT

- ◆ The amount of carbon dioxide a person, organisation, building etc., produces.
- ◆ It is used as a measure of their effect on the environment.
- ◆ **Example:** We can reduce the carbon footprint we leave by using a bicycle to move around.

5

CONSERVATION

- ◆ Carefully using valuable natural substances that exist in limited amounts in order to make certain that they will be available for as long a time as possible.
- ◆ It is a plan for avoiding the unnecessary use of natural materials such as wood, water, or fuel.
- ◆ It is also the protection of plants, animals, and natural areas, especially from the damaging effects of human activity.

6

SUSTAINABILITY

- ◆ Sustainability focuses on meeting the needs of the present without compromising the ability of future generations to meet their needs.
- ◆ The concept of sustainability from environmental perspective hinges on protecting the Planet.
- ◆ It means consuming the planet's resources at a rate at which they can be replenished.
- ◆ The development based on this paradigm is known as sustainable development.

Types of renewable energy such as solar or wind power are described as sustainable. Using wood from managed forests, where trees are replanted, according to how many are cut down, is another example.

7

GEO-ENGINEERING

- ◆ It is the technology that could be used to halt or even reverse climate change.
- ◆ These are the projects designed to tackle the effects of climate change directly, usually by removing CO_2 from the air or limiting the amount of sunlight reaching the planet's surface.
- ◆ CO_2 absorbed by the oceans can be increased by adding large quantities of lime to the water.
- ◆ Some scientists say geo-engineering may become essential because not enough is being done to reduce emissions of greenhouse gases.
- ◆ Some say the technologies are unproven and could have unforeseen circumstances.

8

ECO-TOURISM

- ◆ Tourism, which is ecologically sustainable.
- ◆ It shows respect to nature and does not contribute to its degradation.
- ◆ It is a part of environmental conservation, and understanding what the needs of the people are, who are local to the area so that you can help to improve their quality of life.

It is responsible travel to natural areas that conserves the environment, sustains the well-being of the local people, and involves interpretation and education”

9

ENDANGERED SPECIES

- ◆ An endangered species is an animal or plant that's considered at risk of extinction.
- ◆ This means an animal or plant may soon become extinct and disappear from the face of the Earth.
- ◆ It may be due to sudden rapid decrease in its population or a loss of its critical habitat.

10

BIOLOGICAL CONTROL

- ◆ A method of reducing the number of harmful insects by using other insects or small animals that feed on them.
- ◆ It is defined as the reduction of pest populations by natural enemies and typically involves an active human role.
- ◆ This is frequently referred to as natural control.
