India - 956
World - 965

ARHAR – PROMINENT PRODUCING STATES

Arhar

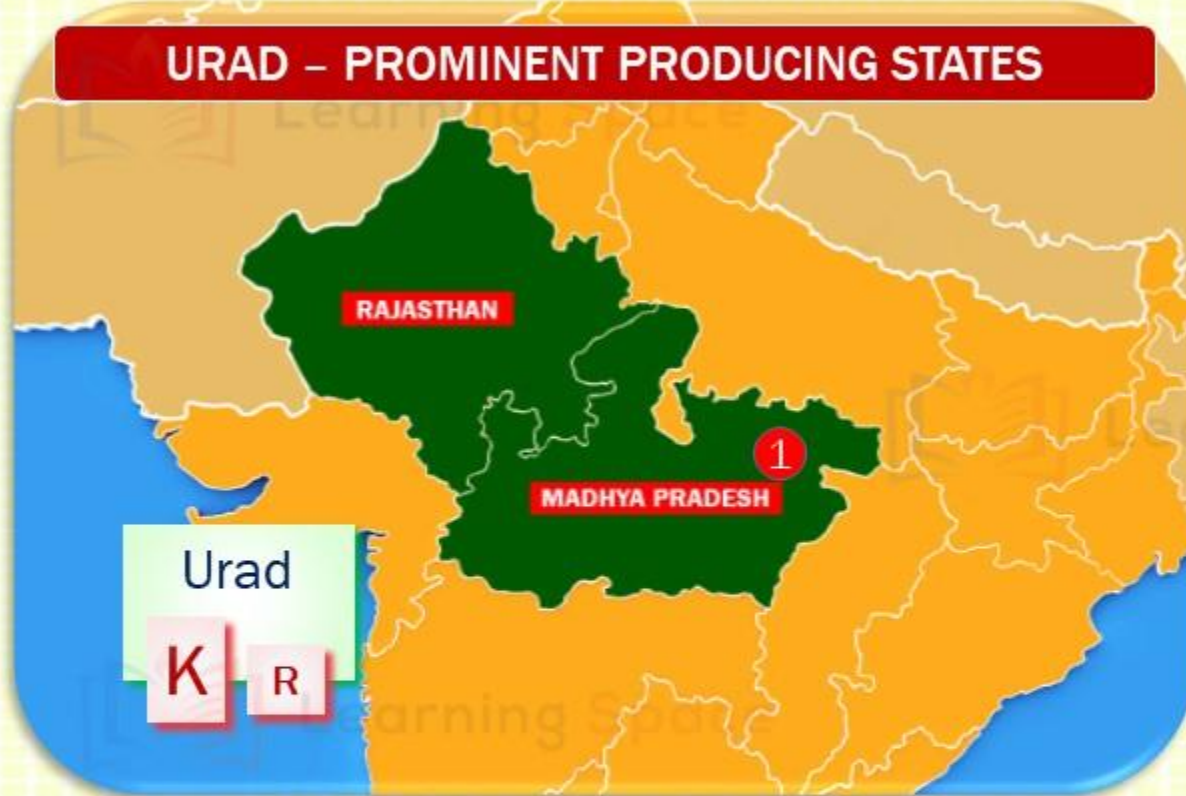

K

**AVG. PRODUCTIVITY –
KG/HA**

India - 729
World - 852

URAD – PROMINENT PRODUCING STATES

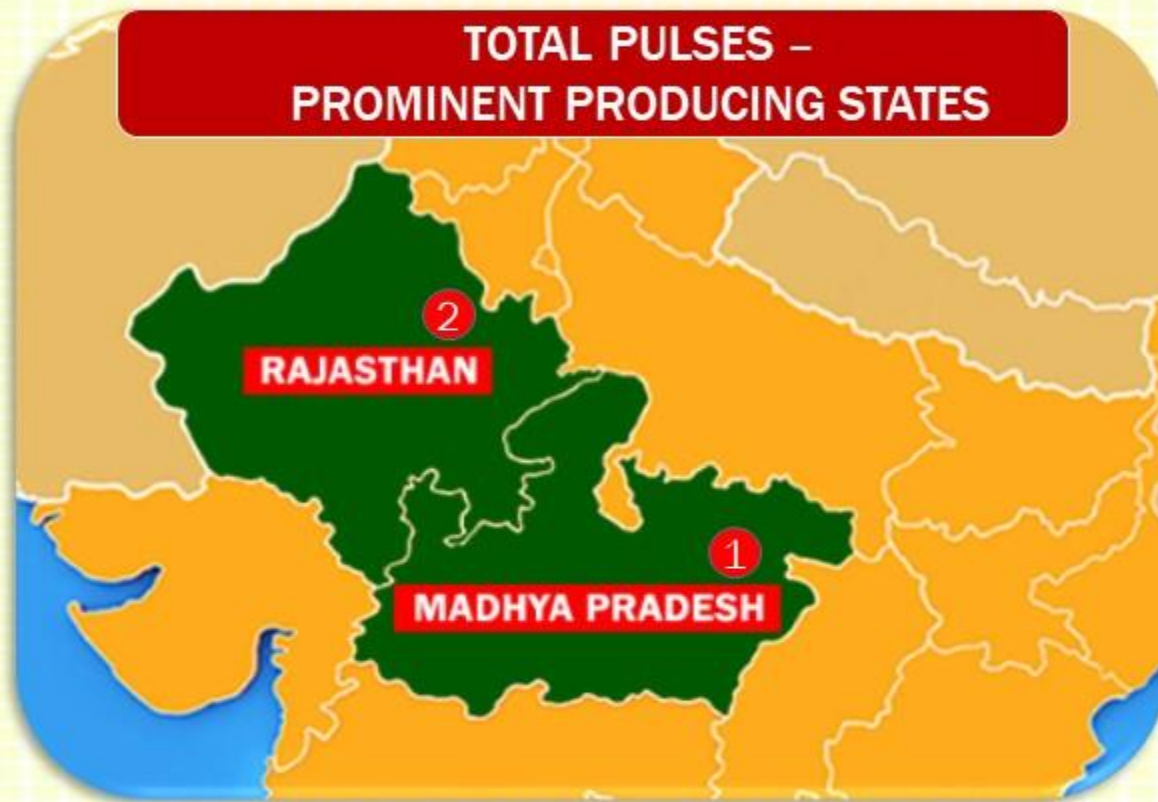

Madhya Pradesh accounts for around one-third of the Urad production

MOONG – PROMINENT PRODUCING STATES

Rajasthan accounts for around half of the moong production

PULSES PRODUCTION IN TOTALITY

Madhya Pradesh accounts for around one-third of total pulses production

TREMENDOUS INCREASE IN PULSES PRODUCTION DURING THE PREVIOUS DECADE!

	Imports (\$ mn)	Production (mn tonnes)
2014-15	2,786.1	17.15
2015-16	3,902.2	16.32
2016-17	4,244.1	23.13
2017-18	2,908.3	25.42

We have seen a significant jump in pulses production during 2016-17 in comparison to the previous years.

- During the previous decade, India achieved tremendous progress in improving the production of pulses.
- The growth rate of pulses production increased from around 5.66% in 2009-14 to 11.21% in 2014-19.
- As a result, India is almost self-sufficient in pulses production. Imports came down significantly since 2019-20.
- There are two positive externalities i.e., nitrogen fixation and water efficiency bestowed by the pulses to the environment.

WHAT WERE THE REASONS FOR THIS TURNAROUND IN PULSES?

Pulses occupy 20% of the area under food grain cultivation. However, they account for less than 10% of India's annual food grains output. Under these circumstances, IIPR Kanpur carried out research to develop high yielding varieties to increase yield to 15-20 quintals per hectare from around 9-10 quintals per hectare at present.

- Higher MSPs year after year.
- Supply of quality seeds through seed hubs. Mini-kits were distributed to the farmers at free of cost through the State Governments to expand cultivation with new types of seeds.
- Government popularized new seed varieties through a network of 150 Seed Centers, Krishi Vigyan Kendras, Agricultural Universities etc.
- Improved irrigation facilities.
- Increased Government procurement of pulses, and imposition of temporary quantitative restrictions on pulses imports.
- National Food Security Mission was expanded to cover all the 638 districts and 60% of the total allocation was earmarked for the pulses.

WHAT IS THE PER CAPITA AVAILABILITY OF PULSES IN INDIA TODAY?

The Agriculture Minister in 2020 stated that the Centre aspires to boost pulses production to 32 million tonnes by 2030 from the current level of around 26 million tonnes.

- The pulses production is around 26 - 27 million tonnes at present. It yields dal (milled pulse) fit for human consumption @ about 18 - 20 million tonnes after accounting for seeding and milling losses.
- The present population is around 141 crore. Hence, the annual per capita availability is around 13 kg. However, there is well recognized skew in consumption of pulses, wherein the poor consume much less than what the per capita availability number of 13 kg suggest.
- Nutritionists recommend pulses consumption of at least 20 kg per person a year for a country with a large vegetarian population.

GOVERNMENT IS CONCENTRATING ON SUPPLY SIDE ... BUT THE FOCUS SHOULD SHIFT TOWARDS DEMAND SIDE!

- The demand side needs greater attention. It devolves on the policymakers to boost pulses consumption.
- It should become an integral part of the Centre's welfare programmes, including Public Distribution System under the National Food Security Act, 2013.
- The policy attention is on higher production, but the imperative need to boost pulses consumption cannot be overlooked!
