

INTERNAL SECURITY

MODULE - 20

BORDER AREA MANAGEMENT

NON-TRADITIONAL THREATS

1

MARITIME TERRORISM

- Terrorism in general has changed the security scenario and has left no frontiers untouched, be it land, space or sea.
- In Indian perspective, terrorism in particular, has had a major impact on maritime security preparedness.
- The 1993 Mumbai serial blasts and 26/11 attack are glaring examples of how vulnerable sea routes can be used to infiltrate man and material to target the land.
- The targets may be soft civilian assets like commercial hubs, population centres, transits, industrial centres, ports, ships as well as conventional military targets of strategic importance and offshore oil facilities or nuclear power plants.

BORDER AREA MANAGEMENT

NON-TRADITIONAL THREATS

2

THREATS FROM SEA TO LAND

In 1993, the explosives used for Mumbai serial blasts reached western shores of India in boats via sea routes.

3

THREATS FROM LAND TO SEA

- In early 2000s al-Qaeda bombed US naval ship USS Cole, killing 17 on board.
- In 2003 the three Iraqi oil terminals were attacked in the Persian Gulf by explosive laden speed boats.
- In 2014 al-Qaeda militants tried to seize a Pakistani naval frigate to target US Navy Vessels on northwestern Indian Ocean

BORDER AREA MANAGEMENT

NON-TRADITIONAL THREATS

4

SMUGGLING

- The high seas are outside the jurisdiction of any single state or agency, hence there is always a reduced scope for the monitoring these areas.
- The non-state actors involved in the unregulated activities of trafficking/smuggling exploit this opportunity.
- With Golden Crescent on its left and Golden Triangle on its right, India is under constant pressure of unregulated movements at sea for trafficking of narcotics and arms.
- The threat of nuclear material being smuggled in/from our neighbouring states is also an alarming dimension to this problem.

BORDER AREA MANAGEMENT

NON-TRADITIONAL THREATS

5

PIRACY

- Piracy is the oldest form of maritime security threat. It targets trade, putting the economy of the concerned state and lives of the people on board at risk, restricting the freedom of using sea routes for economic growth.
- Historically the waters of Gibraltar, Straits of Malacca, Gulf of Aden, Madagascar and the English Channel are the most vulnerable routes for pirate raids.
- The narrow channels with funnel shipping into predictable routes create opportunities for pirates.

- In the last two decades Indian Ocean Region (IOR) has witnessed increased economic activities owing to increased demand of energy from China and India and their increased trade.
- This has lured the pirates into this region.
- In recent years, Gulf of Aden and Somali based piracy has spread across Arabian Sea within 500nm of India's mainland.
- Since 2008, Gulf of Aden is being patrolled by our naval ship and helped in escorting more than 3,000 merchant ships and nearly 25,000 Indian and foreign seafarers.

BORDER AREA MANAGEMENT

NON-TRADITIONAL THREATS

6 ILLEGAL, UNREPORTED AND UNREGULATED FISHING

- IUU is a manifestation of human greed with an assumption that marine resources are an unlimited gift of nature.
- The prevailing tension between fishermen of India and Sri Lanka in Palk Bay is due to differently perceived claims on fishing and employment of different fishing methods.
- Similarly Indian and Pakistani fishermen are subjected to detention by each other's maritime and law enforcing agencies if they transgress into each other's area in the pursuit of big catch.

BORDER AREA MANAGEMENT

NON-TRADITIONAL THREATS

7

CLIMATE CHANGE

- Climate change has manifested in alteration of seasonal temperatures and weather patterns the world over.
- There are impacts on living resources, possible inundation of low lying coastal areas and islands, the loss of national territory etc.
- The current trend of natural disasters such as tropical cyclones, tornadoes, floods, coastal and marine inundation may get exacerbated with climatic changes.

BORDER AREA MANAGEMENT

INDIA'S MARITIME SECURITY MANAGEMENT

1 When we look into the south-east Asian countries like Malaysia, Indonesia, Thailand we find them greatly influenced by Indian culture, language and architecture.

2 Even their dietary habits depict remarkable influences of India.

3 This is visible across the length and breadth of these regions and it could reach there only through centuries of intense maritime interactions.

4 It is an empirical proof of the seafaring activities and maritime traditions nurtured by a succession of royal dynasties that flourished on India's eastern seaboard up to the 13th century.

BORDER AREA MANAGEMENT

INDIA'S MARITIME SECURITY MANAGEMENT

It is only during the last two decades that some factors and incidences forced India to focus on its maritime security management. These are given below:

- After the opening of economy in 1990, India witnessed escalation in the international trade and energy requirement.
- The rise of China as a military and economic power and the geographical position of India in Indian Ocean Region gives her a chance to balance China's upper hand.
- India realised its weakness in the marine domain, only after the 1993 Mumbai serial blasts and 26/11 attacks.
- The steady GDP growth post liberalisation is generating resources/funds for implementation of delayed projects of Indian navy.

BORDER AREA MANAGEMENT

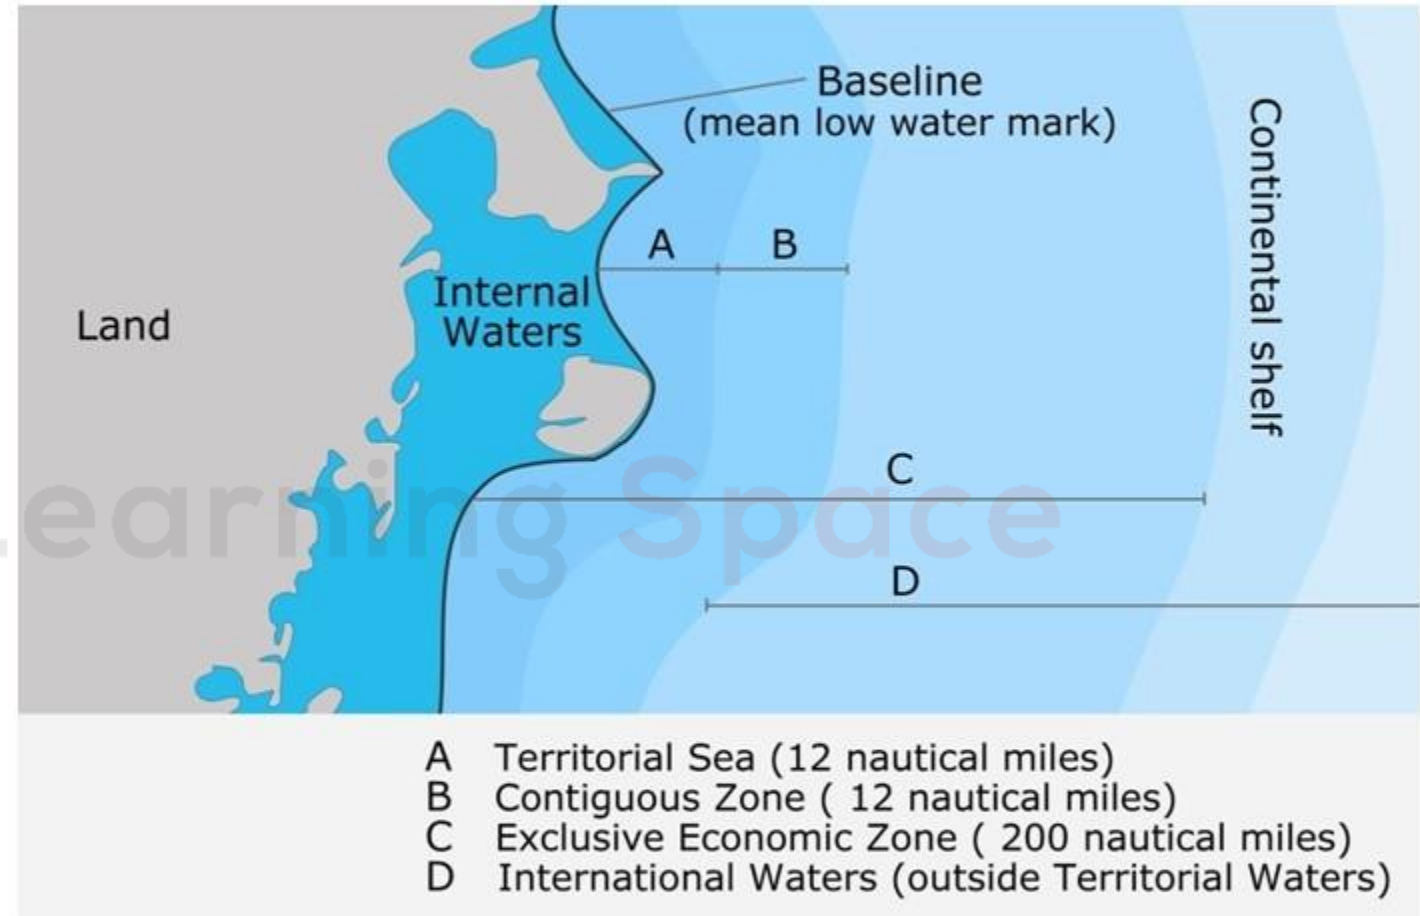

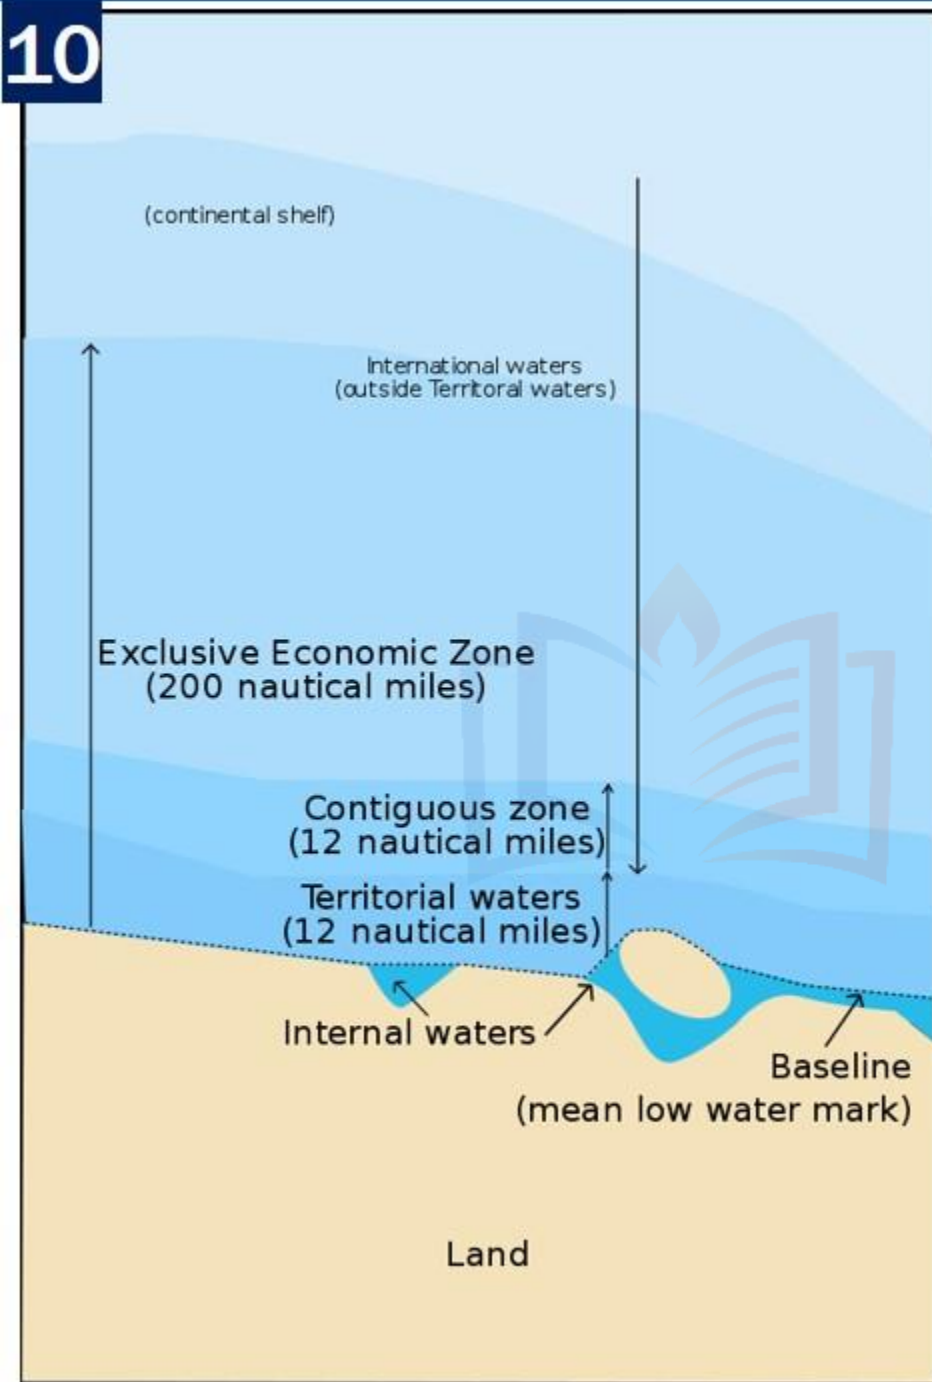

FEW DEFINITIONS RELATED TO MARITIME SECURITY

1**Internal waters:**

- The term refers to all waters landward of the baseline (e.g. low water line) and all harbours.
- Any law in force in the country, including the common law, shall also apply in its internal waters and airspace above its internal waters.
- The rights of innocent passage does not exist here.

2**Territorial waters:**

- The sea within the distance of 12nm from the baseline.
- The right of innocent passage shall exist here.
- Submarines and other underwater vessels are required to navigate on the surface and show their flag.

FEW DEFINITIONS RELATED TO MARITIME SECURITY

3 Contiguous zone:

- This zone refers to the sea beyond territorial waters but within a distance of 24nm from the baseline.
- Within this contiguous zone and airspace above it, the country shall have the right to exercise all powers to prevent contravention of any fiscal law or any customs, immigration or sanitary law and to make such contravention punishable.

4 Exclusive economic zone:

- It is a term for the sea beyond the territorial waters but within a distance of 200 nm from the baseline.
- This zone is subjected to any other laws the country shall have in respect of all natural resources.

BORDER AREA MANAGEMENT

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

- 1** Airspace is the area of the atmosphere above the territory of the state.
- 2** The second decade of the 20th century saw an increase in the international use of aircrafts for carrying passengers, cargo and military assets and this led to the question of air sovereignty.
- 3** The Paris Convention (1919) was the first of its kind to bring some clarity to the definition of air space and airspace sovereignty .

BORDER AREA MANAGEMENT

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

4 Later in 1944 the Chicago convention of International Civil Aviation, established a UN agency named International Civil Aviation Organisation (ICAO) for coordinating and regulating use of airspace.

5 Presently, ICAO has 191 member states including India.

6 Both these conventions are considered milestone in airspace management.

7 “Every state has exclusive sovereignty over their airspace directly above its territory including its territorial waters”.

BORDER AREA MANAGEMENT

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

FEW DEFINITIONS IN AIRSPACE

1 Controlled air space: It is defined as airspace of defined dimensions within which air traffic control measures are provided.

2 Uncontrolled airspace: In uncontrolled airspace all kind of flights are permitted where all participating flights can receive flight information services, if required.

3 Prohibited area: The prohibited area is generally defined in airspace keeping national security concerns in mind and sometimes environmental concerns. Within this space the flights are not permitted at any time or under any circumstances.

BORDER AREA MANAGEMENT

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

FEW DEFINITIONS IN AIRSPACE

CAUTION

**RESTRICTED
AREA**

**RESTRICTED
— AREA —**

**NO ENTRY
UNLESS AUTHORIZED**

4 Restricted area: A restricted area is airspace of defined dimensions above the land area or territorial waters of a state within which the flight of aircrafts is restricted in accordance with specific conditions.

5 Danger area: It may quite a large portion of airspace within which artillery practices, missile firing and other activities may take place and so the flight of aircrafts is restricted.

BORDER AREA MANAGEMENT

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

INDIAN AIRSPACE

- 1 Indian airspace is a great three-dimensional space of 40 million cu.km covering the Indian mainland, islands and its territorial waters under its umbrella.

- 2 Factors like our hostile neighbours, increased air traffic owing to economic liberalisation and the need to keep an eye on trade routes make our airspace management important and challenging.

- 3 Indian airspace, like any other airspace, has limited space left for civil aviation traffic and most of the airspace are marked prohibited, restricted or danger zone.

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

RECENT EXAMPLES OF SECURITY CHALLENGES

1 The security challenges to Indian airspace are highlighted by the infamous Purulia Arms drop case of 1995, followed by shooting down of a Pakistan Air Force's surveillance aircraft killing all 17 on board in 1998.

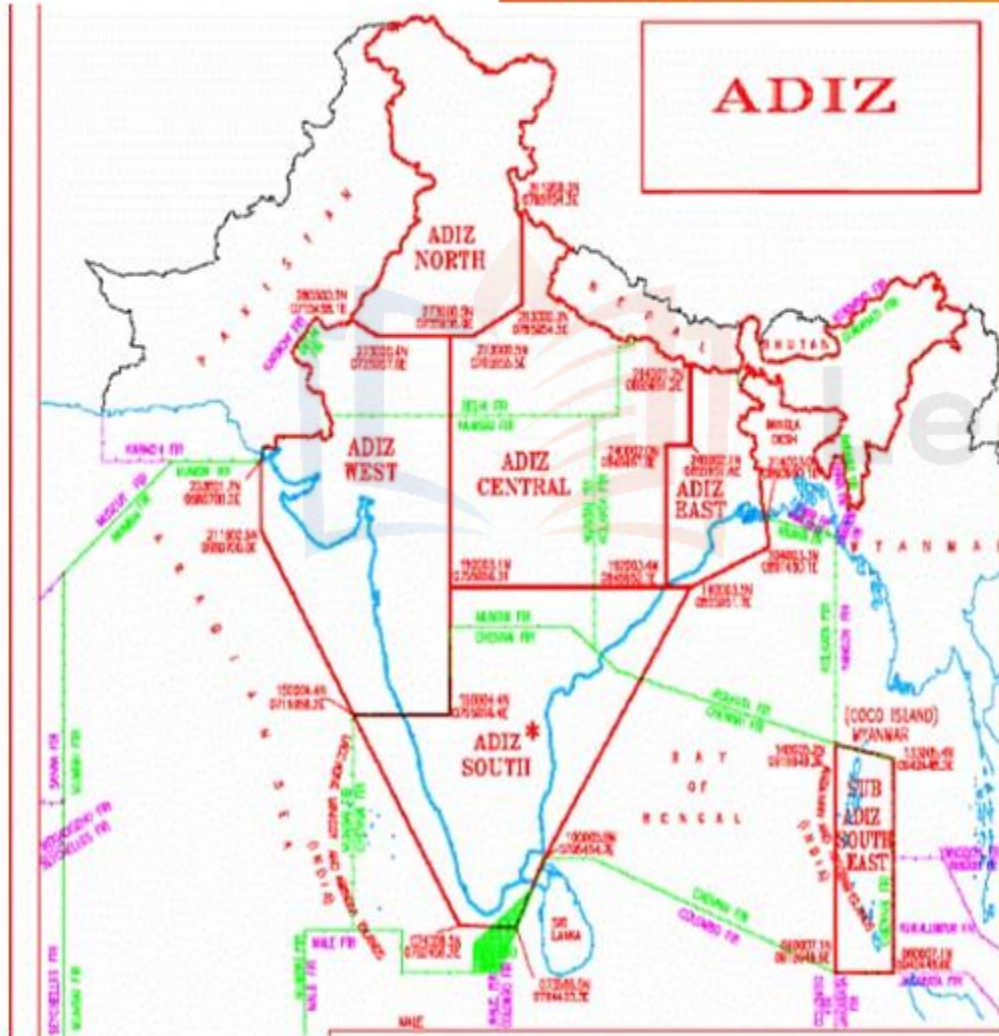

2 Besides these, many minor incidences of airspace violation by our neighbouring countries come into light from time to time.

3 The incidents of global ramifications like 9/11 attack on WTC in USA, where civilian aircrafts were used to bring havoc, recent disappearance of Air Malaysian aircraft MH370 and downing of another Malaysian air aircraft MH17 near Ukraine must be kept in mind while planning for Indian airspace management.

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

AIR DEFENSE IDENTIFICATION ZONE (ADIZ)

- 1 India has established its own ADIZ and procedures for identification, location and control of all the aircrafts within its airspace.
- 2 There are total six ADIZs covering Indian Territory namely, North, West, Central, East, South and South-East.
- 3 ADIZ South also includes airspace over and upto the territorial waters of Lakshadweep Islands.

BORDER AREA MANAGEMENT

AIR SPACE SECURITY, CHALLENGES AND MANAGEMENT

AIR DEFENSE IDENTIFICATION ZONE (ADIZ)

**4**

If an aircraft penetrates into/operates within an ADIZ without Air Defense Clearance, strays into a restricted area/prohibited area/danger area or fails to inform the Air Traffic Control Centre about its deviation/intended deviation from the route, it will be liable to interception by fighter aircraft.
