LEARN WITH GVR SIR

MODULE - 32

Unrelenting : *Extremely determined, never becoming weaker, never admitting defeat.*

312

Example :
Though Rakesh is from rural background, due to his **unrelenting** efforts, he got through the Civil Services Examination and became an IPS officer.

Tenacity : *Determination to continue what you are doing.*

313

Example :
To achieve success, one should
have **tenacity**.

Perseverance : *Continued effort to do or achieve something, when it is difficult / takes long time.*

314

Example :
Perseverance is the essential trait to become a successful scientist.

Resilience : *To learn from the mistakes.*

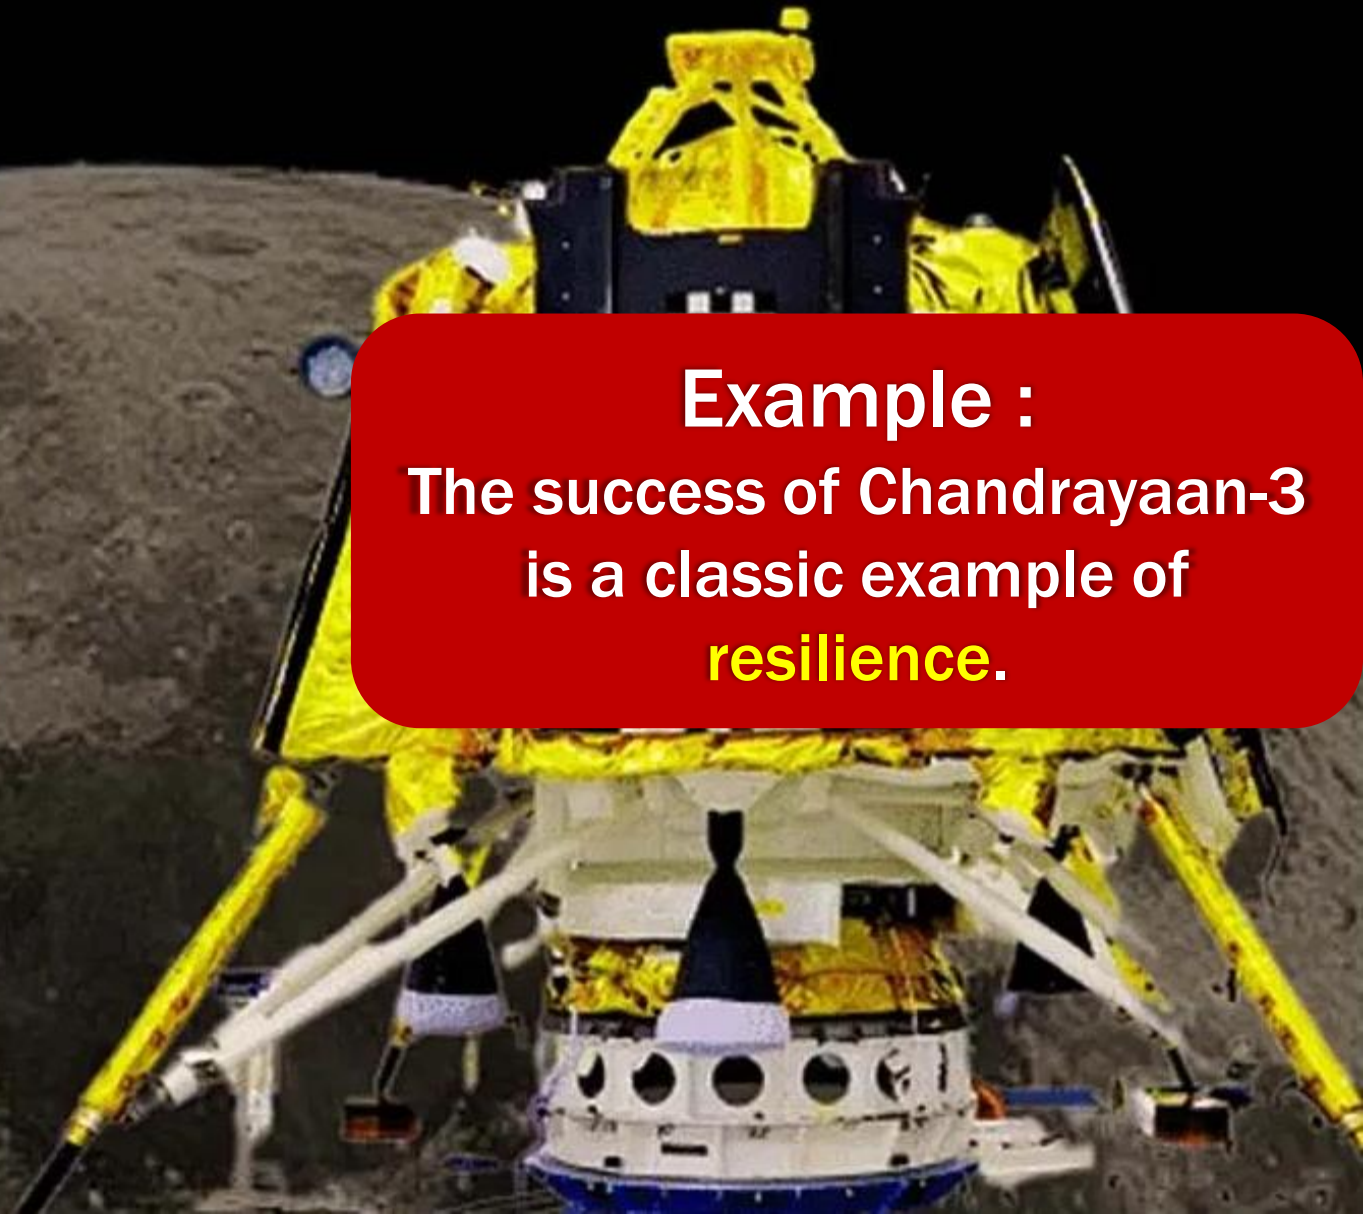

315

CHANDRAYAAN- 3

Example :

The success of Chandrayaan-3 is a classic example of **resilience.**

Guile: *The practice of deceiving people or using other dishonest methods to achieve your aims or the ability to deceive people for this purpose.*

316

Example :
Several rulers in African countries are using their political **guile** to stay in power.

NORTH AFRICA

Guile: *Clever, but sometimes dishonest behavior that one uses to deceive someone.*

316

Example :
Raju is an honest officer, totally lacking in **guile**.

Ambiguous : *Having or expressing more than one possible meaning intentionally.*

317

Example :

Company X and Company Y decided to form a Joint Venture. However, the agreement signed is quite **ambiguous**.

Ambiguous : *Doubtful or uncertain, especially from obscurity or indistinctness.*

317

Example :
The last question in the IIT-JEE
Mains examination is quite
ambiguous.

Primacy : *The state or quality of being most important or significant, highest ranked or supreme.*

318

Example :

Global consortium of Nations against war mongering is to be created, in which **primacy** is to be accorded to the ones whose values and geopolitics are in alignment with peace and spiritual values.

Primacy : *The state of being the most important thing.*

318

Example :

Democratic countries give **primacy** to the fundamental rights of the citizens.

Negate : *To cause something to have no effect.*

319

Example :

The increase in sales has been **negated** by the rising costs of running the business.

Negate : *To nullify, deny the existence or truth of something or to make something ineffective or invalid.*

319

Example :

Her positive attitude helped **negate** the impact of the challenging circumstances.

Circumvent : *To avoid something, especially cleverly or illegally.*

320

Example :

Startup companies are being registered in Singapore to **circumvent** various taxation laws in India.

Circumvent : *To avoid something by going around it.*

320

Example :

Several Indian citizens are becoming NRIs to **circumvent** Indian income tax laws.

INCOME TAX LAW

Vegary : An erratic, unpredictable or extravagant manifestation or action.

321

Example :

The Government is trying to bring in a policy that can arrest the **vagaries** of the market.

Vegary : *Unexpected change in a situation or in someone's behavior.*

321

Example :

The **vagaries** of nature are affecting the farmers as they are at the mercy of weather to have a good harvest.

Honest reckoning

Major world economies seem unwilling to move away from fossil fuel

The boundary wall enclosing discussions around global climate is 1.5°C, or the average increase in global temperatures since pre-industrial times. Now that 1°C is crossed, all the wrangling under way at the climate summit in Dubai is to cap the half-degree rise. Global pledges to cut emissions are insufficient to achieve this. Current estimates are that to limit warming to 1.5°C, the world requires three times more renewable energy capacity by 2030, or at least 11,000 GW. That there is wide global consensus on the need for this tripling was first formally articulated in the New Delhi Leaders' Declaration at the G-20 summit in Delhi in September. In the run-up to the Dubai summit, it was perceived that this would be widely endorsed by the larger group of about 190 countries signatory to the UN convention on climate. It turns out that, so far, 118 countries have endorsed the pledge and two major countries, i.e., India and China, have so far abstained from signing. The Global Renewables and Energy Efficiency Pledge, while still a draft text, says that in their pursuit of tripling renewable energy capacity, signatories should also commit to "...phase down of unabated coal power, in particular ending the continued investment in unabated new coal-fired power plants". This is a major red line for India.

While India has positioned itself as a champion for renewable energy – its 2030 targets as articulated in its formal, nationally determined contributions (NDC) speak of tripling renewable energy capacity to 500 GW from the current 170 GW – it has reiterated several times that it could not be forced to give up certain fuels. Coal-fired plants are responsible for nearly 70% of India's greenhouse gas emissions. Developed countries that have made commitments to give up coal often have other large, fossil-fuel resources as back-up. The United States joined 56 other countries at Dubai in a commitment to completely eschew coal for its energy use, by 2035. However the U.S. only draws about 20% of its energy from coal and at least 55% from oil and gas, with plans to actually produce more of it in 2030 than at present. The paradox of the world's major economies' commitment to renewable energy is that it is not, as of now, actively geared to replace fossil fuel. Till there is an honest commitment to actually replace existing and future fossil capacity with clean energy, pledges and declarations are worth little more than the paper they are drafted on.

HONEST RECKONING**Major world economies seem unwilling to move away from fossil fuel**

The **boundary wall** enclosing discussions around global climate is 1.5°C, or the average increase in global temperatures since pre-industrial times. Now that 1°C is crossed, all the **wrangling** under way at the climate summit in Dubai is **to cap** the half-degree rise. Global pledges to cut emissions are insufficient to achieve this. Current estimates are that to limit warming to 1.5°C, the world requires three times more renewable energy capacity by 2030, or at least 11,000 GW. That there is wide global **consensus** on the need for this tripling was first **formally articulated** in the New Delhi Leaders' Declaration at the G-20 summit in Delhi in September. In the **run-up** to the Dubai summit, it was perceived that this would be widely **endorsed** by the larger group of about 190 countries signatory to the UN convention on climate.
