

GOVERNANCE

**e-GOVERNANCE –
THE SMART WAY FORWARD**

MODULE - 5

e-GOVERNANCE - THE SMART WAY FORWARD

BUILDING A CONGENIAL ENVIRONMENT

Building a congenial environment is a sine qua non for successful implementation of e-Governance initiatives. This should be achieved by:

- 1 Creating and displaying a will to change within the government
- 2 Providing political support at the highest level
- 3 Incentivising e-Governance and overcoming the resistance to change within government
- 4 Creating awareness in the public with a view to generating a demand for change.

e-GOVERNANCE - THE SMART WAY FORWARD

IDENTIFICATION OF E-GOVERNANCE PROJECTS AND PRIORITISATION

1

Government organizations/ departments at Union and State Government levels need to identify e-Governance initiatives which could be undertaken within their functional domain, keeping the needs of the citizens in mind.

e-GOVERNANCE - THE SMART WAY FORWARD

IDENTIFICATION OF E-GOVERNANCE PROJECTS AND PRIORITISATION

2 Such initiatives may be categorized as follows:

i Initiatives which would provide timely and useful information to the citizens.

ii Initiatives which allow for making elementary online transactions including payment for services.

iii Initiatives which require verification of information data submitted online.

iv Initiatives which require creation and integration of complex databases.

IDENTIFICATION OF E-GOVERNANCE PROJECTS AND PRIORITISATION

- 3**
- Instead of implementing all such initiatives at one go, these should be implemented after prioritizing them on the basis of ease of implementation.
 - However, suitable modifications in their prioritization may be made by organizations! departments on the basis of the needs of and likely impact on citizens.

- 4**
- Respective Departments of Information Technology at the Union and State Government levels should coordinate between organizations and provide technical support if needed, in the task of identification and prioritisation.

BUSINESS PROCESS RE-ENGINEERING

- 1** For every function a government organisation performs and every service or information it is required to provide, there should be a step-by-step analysis of each process to ensure its rationality and simplicity.
- 2** Such analysis should incorporate the viewpoints of all stakeholders, while maintaining the citizen-centricity of the exercise.
- 3** After identifying steps which are redundant or which require simplification, and which are adaptable to e-Governance, the provisions of the law, rules, regulations, instructions, codes, manuals etc. which form their basis should also be identified.
- 4** Following this exercise, governmental forms, processes and structures should be re-designed to make them adaptable to e-Governance, backed by procedural, institutional and legal changes.

CAPACITY BUILDING AND CREATING AWARENESS

- 1** Capacity building efforts must attend to both the organizational capacity building as also the professional and skills upgradation of individuals associated with the implementation of e-Governance projects.
- 2** Each government organization must conduct a capacity assessment which should form the basis for training their personnel.
- 3** Such capacity assessment may be carried out by the State Department of Information Technology in case of State Governments, and the Union Department of Information Technology in the Centre.
- 4** Organisations should prepare a roadmap for enhancing the capabilities of both their employees and the organization.

CAPACITY BUILDING AND CREATING AWARENESS

5 A network of training institutions needs to be created in the States with the Administrative Training Institutes at the apex.

6 The Administrative Training Institutes in various States should take up capacity building programmes in e-Governance, by establishing strong e-Governance wings. ATIs need to be strengthened under the NeGP

7 State Governments should operationalise the Capacity Building Roadmap (CBRMs), under the overall guidance and support of the D IT, Government of India.

8 Lessons learnt from previous successful e-Governance initiatives should be incorporated in training programmes.

DEVELOPING TECHNOLOGICAL SOLUTIONS

There is a need to:

- 1** Develop a national e-Governance 'enterprise architecture' framework as has been done in some countries.
- 2**
 - Promote the use of 'enterprise architecture' in the successful implementation of e-Governance initiatives
 - This would require building capacity of top level managers in all government organizations.

IMPLEMENTATION

- 1 All organizations should carry out a periodic independent evaluation of the information available on their web sites from the citizens perspective and then re-design their web sites on the basis of the feedback obtained.
- 2 Each government organization should prepare a time-bound plan for providing of transactional information through their websites.
- 3 To begin with, this could be done by updating the websites at regular intervals, while at the same time, re-engineering the back-end processes and putting them on computer networks. Ultimately, all the back-end processes should be computerized.

IMPLEMENTATION

4 Complex e-Governance projects should be planned and implemented like any major project having several parts/components for which Project Management capability should be developed in-house.

5 Implementation of e-Governance projects would involve a detailed '**project management**' exercise which would consist of the following activities:

- i** Breaking up entire e-Governance projects into components! activities
- ii** Planning each activity in detail

iii Allocating resources, both human and financial

iv Commencement of activities as per the plan and continuous tracking

v Need-based mid-course correction

IMPLEMENTATION

6 While implementing transformational programmes like the NeGp, it is essential to recognise of the importance of a structured approach to Change Management - the people side of transformation.

7 It is necessary for Government agencies, especially the nodal Ministries and the Administrative Reforms and IT Departments, to design appropriate Change Management Strategies and Plans to accompany the e-Governance implementation.
