ECONOMIC GEOGRAPHY

GS PAPER 1 QUESTION

POSSIBLE MAINS QUESTION

- 1** How is fishing said to be a predominant economic activity in the coastal lands of Japan?
(10 Marks) (200 words)
- 2** Geographically, explain how Japan and Newfoundland are good breeding grounds of fishes?
(12 Marks) (250 words)

FISHING AS AN ECONOMIC ACTIVITY

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

- 1 In the north-west Pacific, surrounding the islands of Japan, is another major fishing area of the world.
- 2 Nowhere else in the world are there so many people engaged in fishing as in this part of the north-west Pacific.
- 3 The mountainous nature of Japan and parts of mainland eastern Asia is one of the reason which seems to have driven many to seek a livelihood from the sea.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

4 The scarcity of meat (there is little pasture in Japan for livestock farming of any kind) and religious reasons have popularised fish as the principal item of diet and the chief protein food of the Japanese and the Chinese as well.

5 Large quantities of fish and fish products are either canned or preserved for export to neighbouring countries.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

Nori is a seaweed which is used in the making of the traditional Japanese cuisine- Sushi!

6 The Japanese also make use of fish wastes, fish meal and seaweeds as fertilizers in their farms.

7 Japan is one of the few countries that has taken to seaweed cultivation.

8 Coastal farms that are submerged in water grow weeds for sale as fertilizers, chemical ingredient and even as food.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

- 9 Another interesting aspect of Japanese fishing is **pearl culture**.

- 10 The divers of southern Japan dive down into the coastal waters and bring to the surface **shell-fish called pearl oysters** and extract the highly prized pearls for sale as ornaments.

- 11 As natural pearls in oysters are difficult to obtain in large numbers, **the Japanese have begun to breed the young oysters**.

- 12 By injecting tiny “seeds” into them, the oysters **are made to secrete the pearl material**, which accumulates to form cultured pearls. These are collected and exported.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

13 Large whaling fleets complete with processing plants and experienced crews stay out in the open seas and return only occasionally for refueling or replenishment of fresh provisions.

14 As a nation, Japan accounts for a sixth of the world's total annual fish caught. She is the one of the world's greatest fishing nation today.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

LET US FIND OUT HOW THIS IS POSSIBLE...

REASON 1- 80% NON-AGRICULTURAL LAND

- 1 Japan is not well endowed with natural resources, for as such as 80 percent of her land is classified Non-Agricultural. She has to take to the sea if she wants to survive.
- 2 This has compelled the people to develop the seas, and fishing has for centuries been the traditional occupation of many coastal Japanese.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

LET US FIND OUT HOW THIS IS POSSIBLE...

REASON 2- MEETING GROUND OF WARM AND COLD CURRENTS

- 1 The continental shelves around the islands of Japan are rich in plankton, due to the meeting of the warm Kuroshio and the cold Oyashio currents and provide excellent breeding grounds for all kinds of fish including herring, cod, mackerel, bonito, salmon, sardine and tuna, as well as crabs and lobsters.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

LET US FIND OUT HOW THIS IS POSSIBLE...

REASON 3- FAVOURABLE COASTLINE FOR PORTS

- 1 The indented coastline of Japan, provides sheltered fishing ports, calm waters and safe landing places, ideal for the fishing industry.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

LET US FIND OUT HOW THIS IS POSSIBLE...

REASON 4- LESS CATTLE/POULTRY

- 1 Lack of lowlands and pastures means that only a few animals can be kept to supply meat and other protein food.
- 2 Fish in all its varied forms, fresh, canned, dried, frozen and in the form of fish pastes, fish sauce and spiced condiments takes the place of meat as Japan's primary source of protein food.

- 3 There is a great demand for it locally, and for export to other east Asiatic neighbours which lack the techniques of large scale commercial fishing.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

LET US FIND OUT HOW THIS IS POSSIBLE...

REASON 5- TECHNOLOGICAL PROGRESS

- 1 The Japanese fishermen began with small fishing boats, using nets, traps and lines.
- 2 With the progress made in industries, fishing has also become more scientific, aiming at heavy hauls, high returns and economy of time, effort and money.
- 3 Though three quarters of fishermen practise off-shore pelagic fishing either full-time or part-time in small boats, most of the commercial deep-sea demersal fishing is now highly mechanized.

8 THE LAURENTIAN TYPE ECONOMIC DEVELOPMENT

2. FISHING OFF JAPAN

LET US FIND OUT HOW THIS IS POSSIBLE...

REASON 5- TECHNOLOGICAL PROGRESS

4 Powered trawlers and modern refrigeration plants backed by sound financial organisations have greatly increased the annual fish yield.

5 Japan is now not only a major producer and exporter of fish and marine products, but also a centre for marine and fishing research.
