

INDIAN SOCIETY

MODULE - 1

DEMOGRAPHIC STRUCTURE OF INDIAN SOCIETY

INTRODUCTION

- 1** Subject in which no one starts from zero.
- 2** See the society from many vantage points – not just our own.
- 3** Look at yourself from the outside.
- 4** Provides a sort of social map on which you could locate yourself.
- 5** Help you to map the links and connections between “personal troubles” and “social issues”.

BASICS

Demography is the systematic study of population based on census or survey

CENSUS

1 The American census of 1790 was probably the first modern census.

2 In India, censuses began to be conducted by the British Indian government between 1867-72.

3 Regular ten yearly (or decennial) censuses have been conducted since 1881.

4 Indian census is the largest such exercise in the world.

5 First-ever caste-based census in 1931.

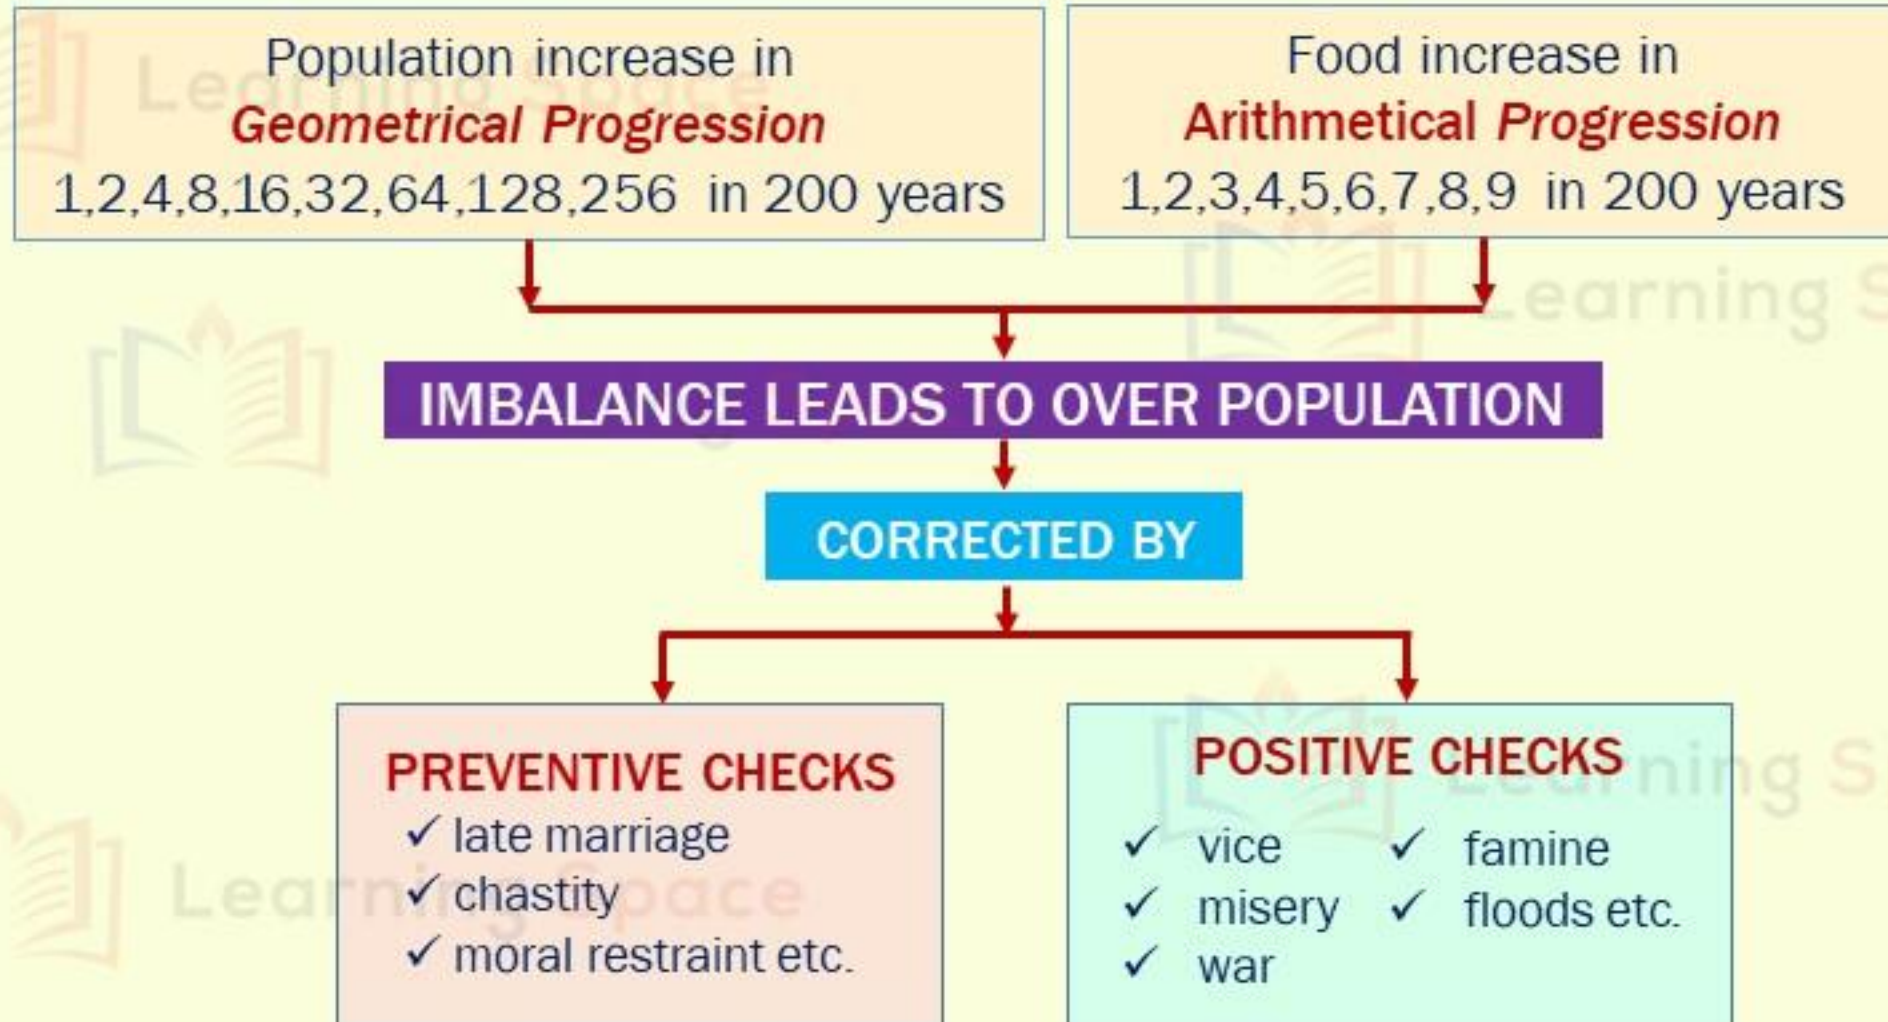

CENSUS

Census is a process of counting the number of people living in a country and to collect information about them such as age, sex ratio, race etc.

BASICS

MALTHUSIAN THEORY OF POPULATION GROWTH

BASICS

THEORY OF DEMOGRAPHIC TRANSITION

- Population growth is linked to overall levels of economic development.
- Every society follows a typical pattern of development related population growth.

PHASES OF POPULATION GROWTH

PHASE - I

Death rate and the birth rate are very high - low population growth in a society that is underdeveloped and technologically backward.

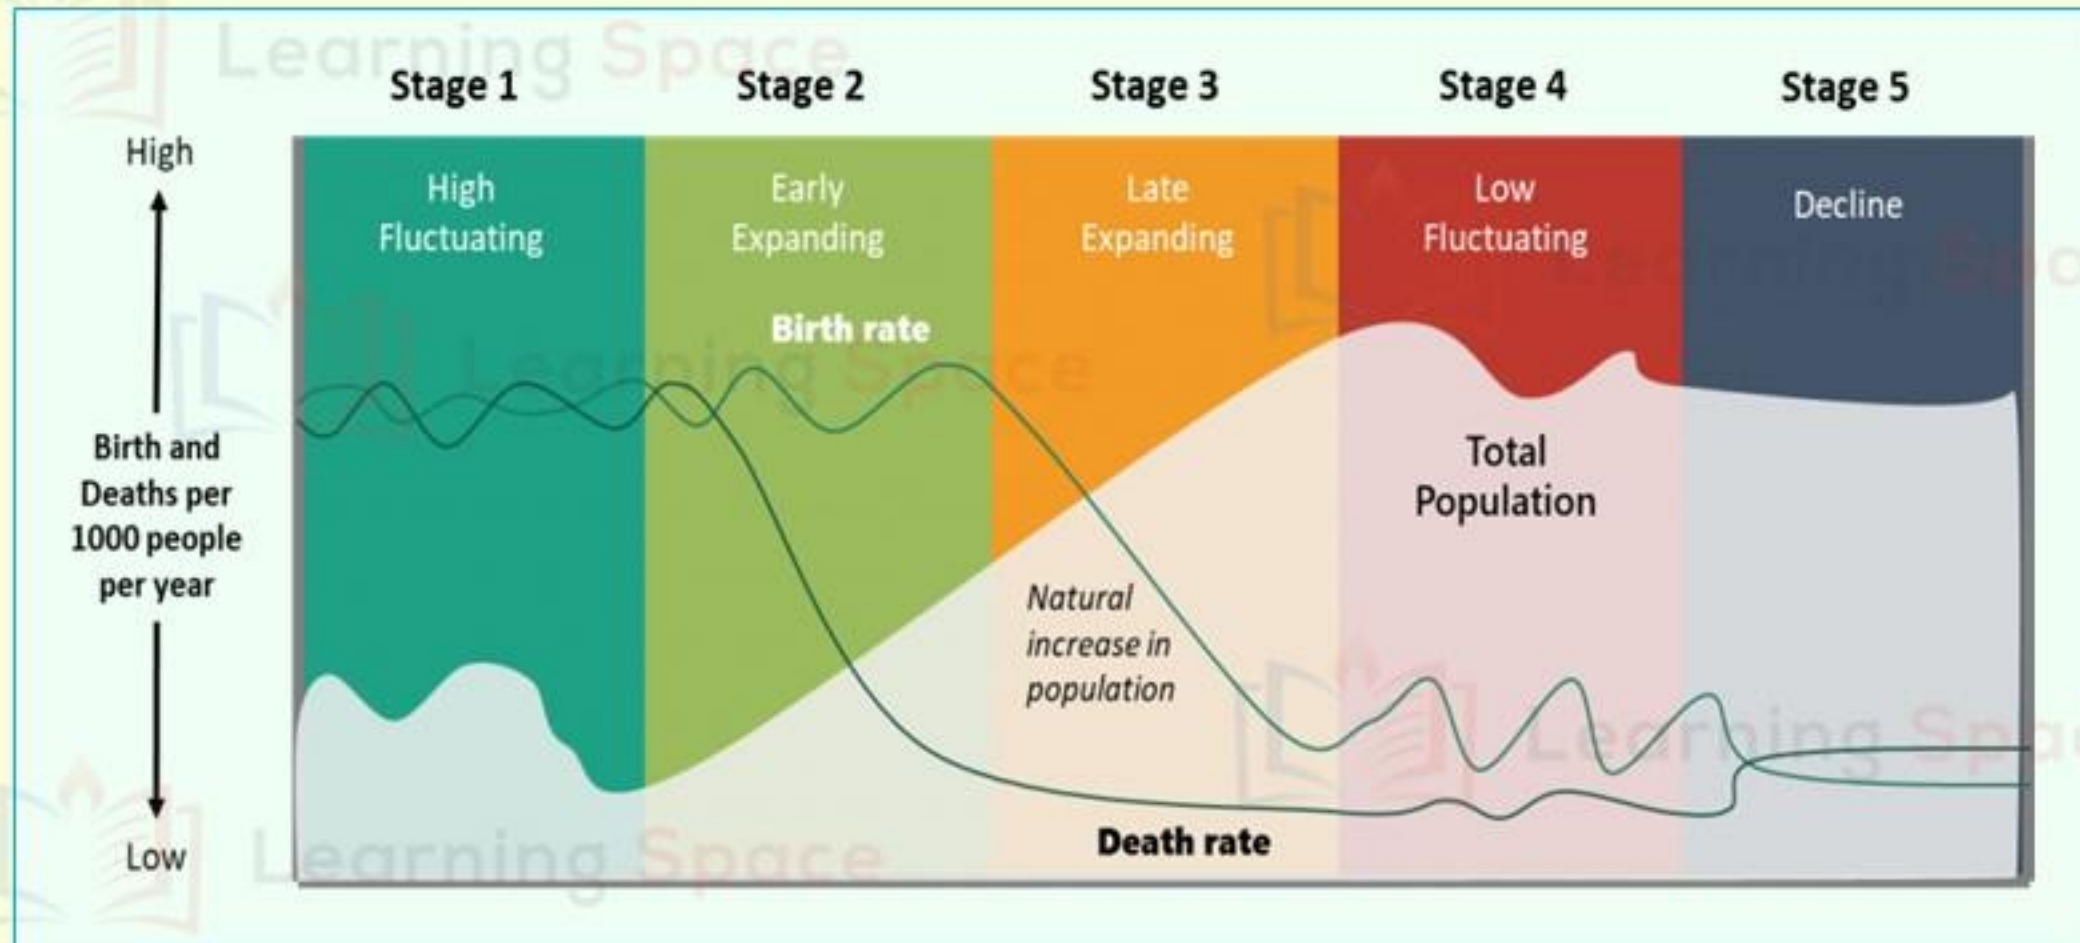

PHASE - II

low death rates but high birth rates - transitional stage of movement from a backward to an advanced stage - high rates of growth of population.

PHASE - III

death rate and birth rate have been reduced - low growth in a developed and industrialized society

THEORY OF DEMOGRAPHIC TRANSITION

SIZE AND GROWTH OF INDIA'S POPULATION

1901-1951

Average annual growth rate did not exceed 1.33%, a modest rate of growth

1911-1921

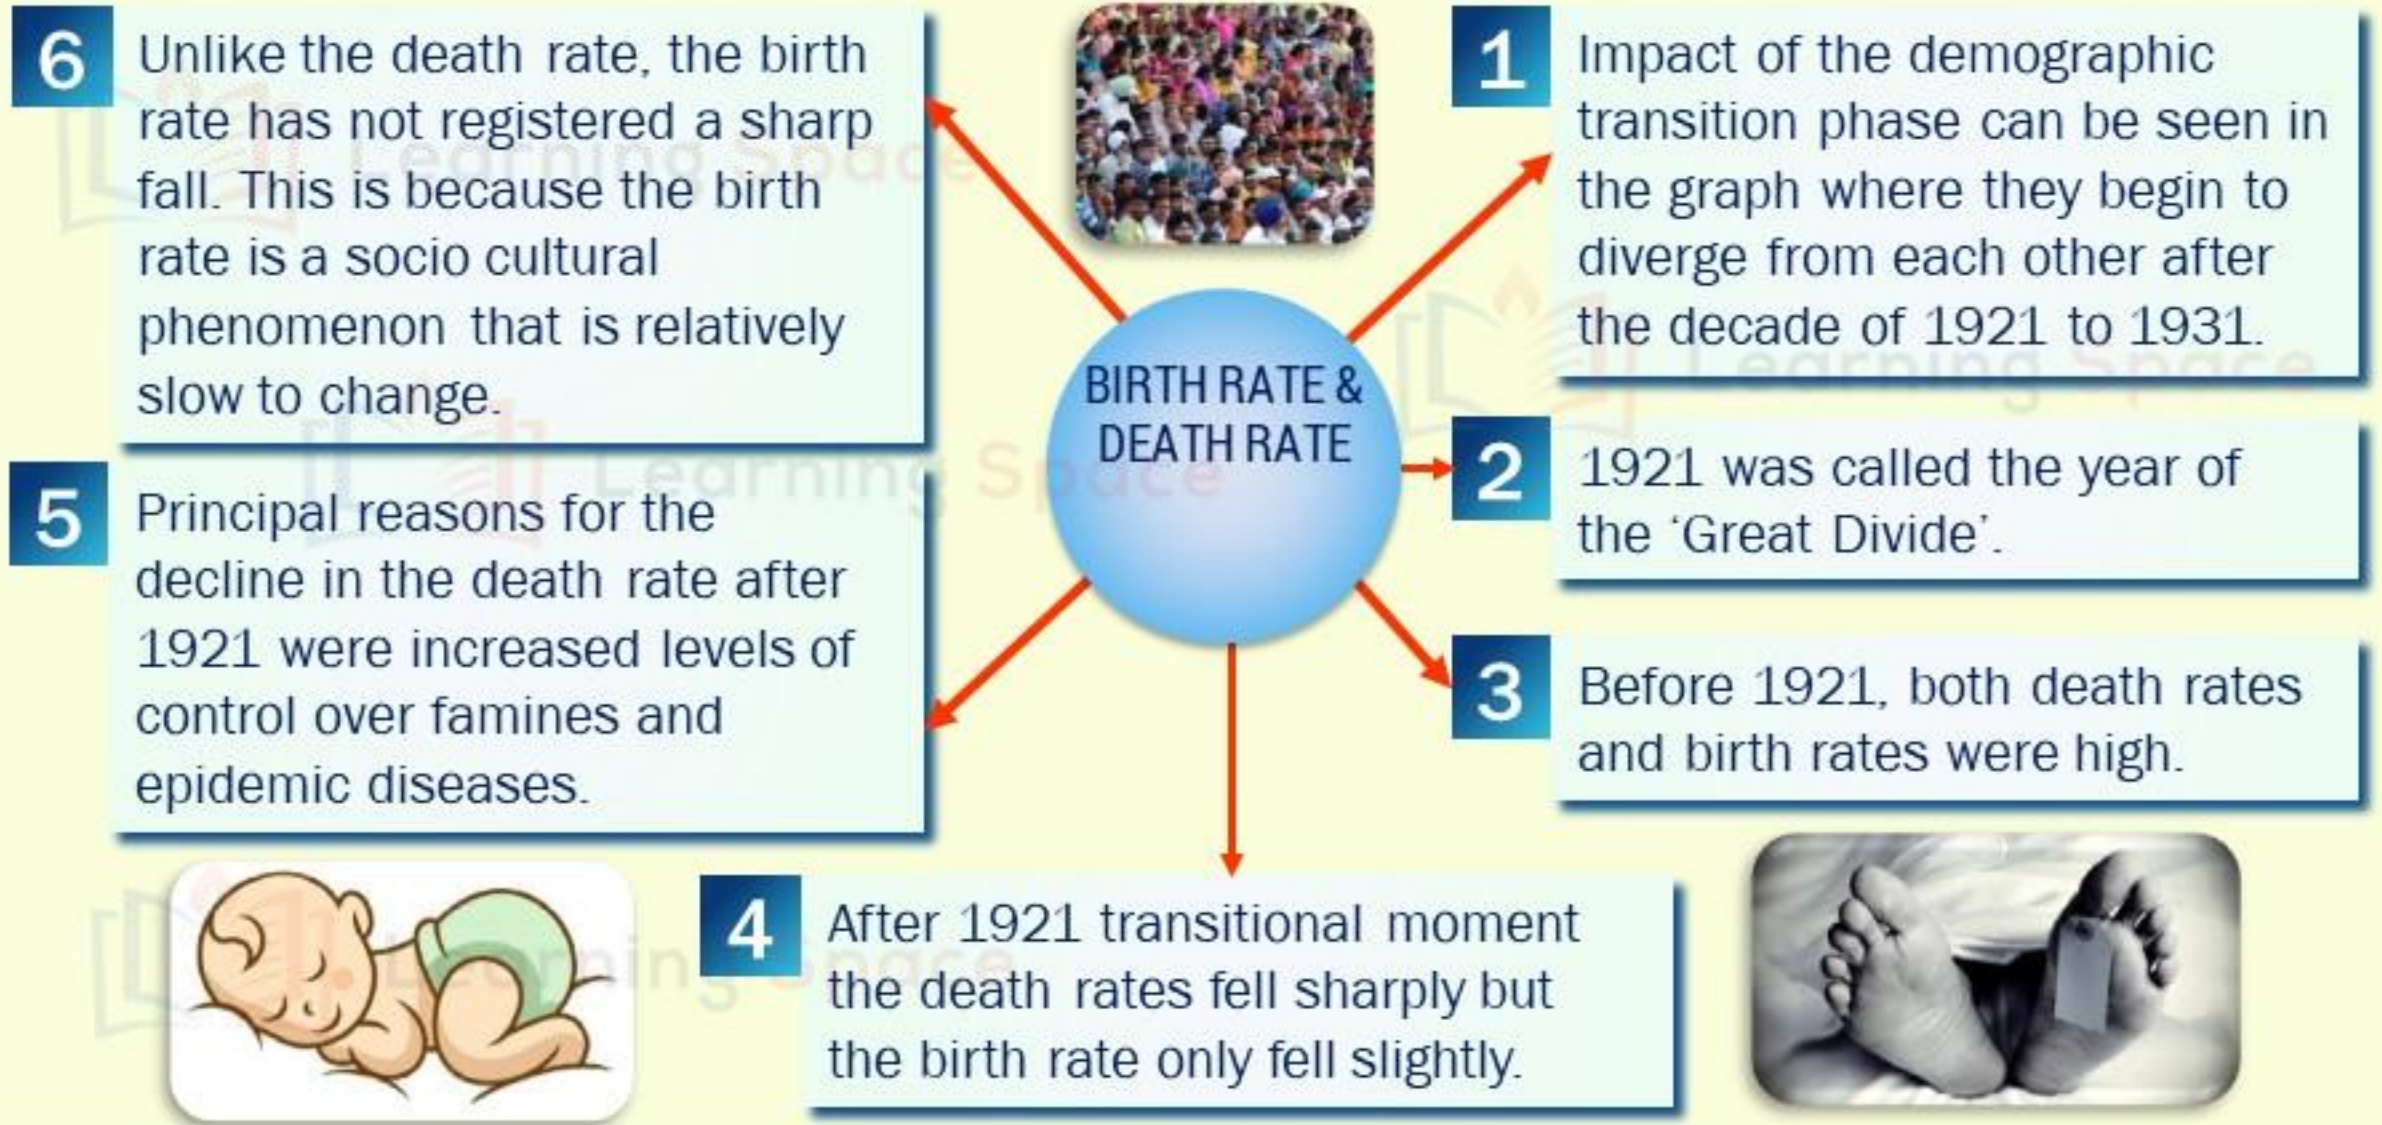

Negative rate of growth of - 0.03%. (because of the influenza epidemic during 1918-19)

1961-1981

Growth rate of population substantially increased after independence from British rule going up to 2.2% during 1961-1981

YEAR	Total population (In millions)	Average Annual Growth Rate (%)	Decadal Growth Rate (%)
1901	238	-	-
1911	252	0.56	5.8
1921	251	-0.03	-0.3
1931	279	1.04	11.0
1941	319	1.33	14.2
1951	361	1.25	13.3
1961	439	1.96	21.6
1971	548	2.22	24.8
1981	683	2.20	24.7
1991	846	2.14	23.9
2001	1028	1.95	21.5
2011	1210	1.63	17.7

SIZE AND GROWTH OF INDIA'S POPULATION

SIZE AND GROWTH OF INDIA'S POPULATION

VARIATIONS IN FERTILITY RATES ACROSS THE STATES

- 1** Increased levels of prosperity exert a strong downward pull on the birth rate.
- 2** Once infant mortality rates decline, and there is an overall increase in the levels of education and awareness, family size begins to fall.
- 3** States like Andhra Pradesh, Himachal Pradesh, Punjab, Tamil Nadu and West Bengal have managed to bring down their total fertility rates (TFR) to 1.7 each (below the replacement level).

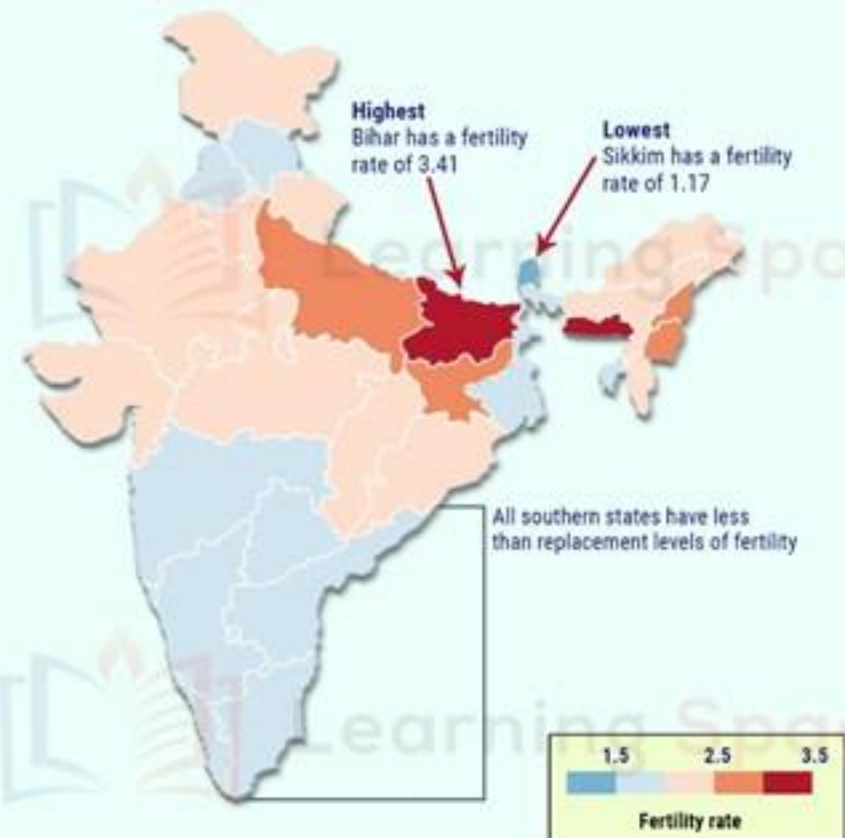

VARIATIONS IN FERTILITY RATES ACROSS THE STATES

4 States like Bihar, Madhya Pradesh, Rajasthan and Uttar Pradesh have very high TFRs of 3.3, 2.8, 2.7 and 3.1, respectively in 2016.

5 As per Economic Survey 2019:

- India's total birth rate was 22.4, among them rural birth rate was 22.4 and urban birth rate was 17.3
- Highest birth rate is of Uttar Pradesh (25.9) and Bihar (26.4), and account for about half (50%) of the additions to the Indian population upto the year 2041

Fertility rates across India

AGE STRUCTURE OF THE INDIAN POPULATION

1971-2001

- 1** Share of the under 15 age group in the total population has come down from its highest level of 42% to 35%
- 2** Share of the 15-60 age group has increased slightly from 53% to 59%
- 3** Share of the 60+ age group is very small but it has begun to increase (from 5% to 7%)

YEAR	AGE GROUPS			TOTAL
	0-14 YEARS	15-59 YEARS	60+ YEARS	
1961	41	53	6	100
1971	42	53	5	100
1981	40	54	6	100
1991	38	56	7	100
2001	34	59	7	100
2011	29	63	8	100
2026	23	64	12	100

Age group columns shows percentage shares; rows may not add up to 100 because of rounding.

Source: Based on data from the Technical Group on Population Projections (1996 and 2006) of the National Commission on Population

AGE STRUCTURE OF THE INDIAN POPULATION

2001-2026

1 Age composition of the Indian population is expected to change significantly in the next two decades.

2 0 -14 age group will reduce its share by about 11.

3 60 plus age group will increase its share by about 5%

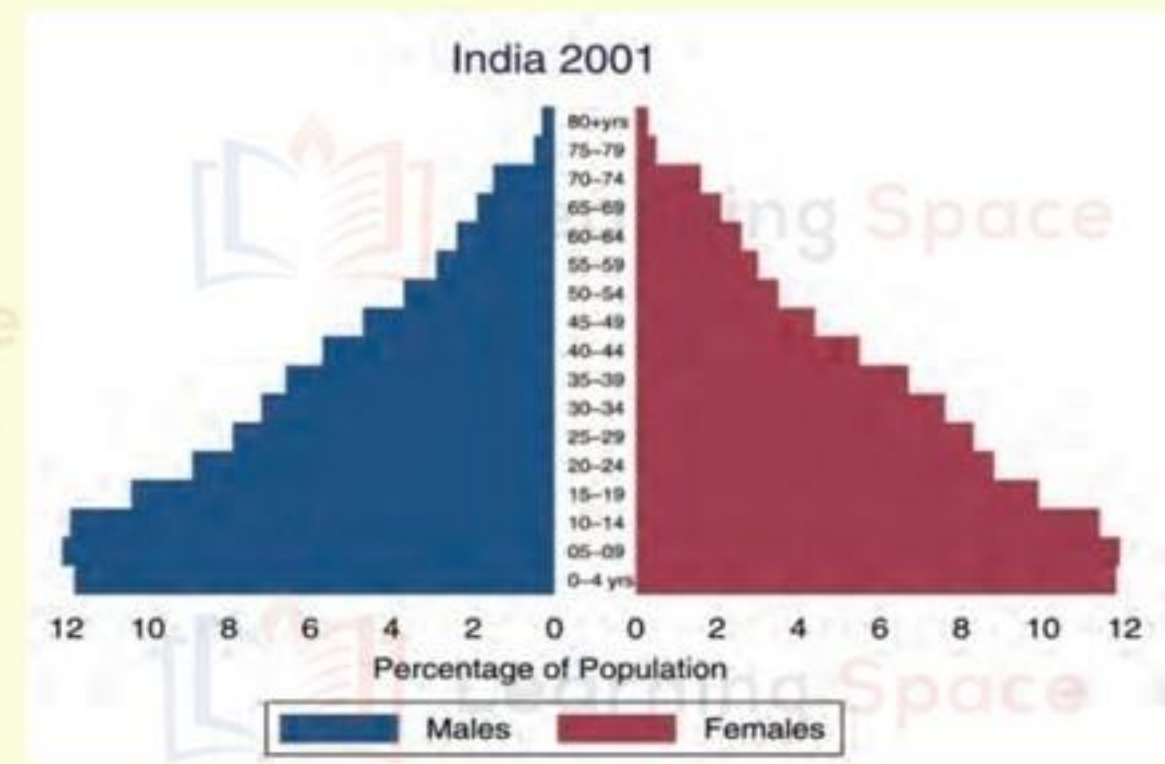

YEAR	AGE GROUPS			TOTAL
	0-14 YEARS	15-59 YEARS	60+ YEARS	
1961	41	53	6	100
1971	42	53	5	100
1981	40	54	6	100
1991	38	56	7	100
2001	34	59	7	100
2011	29	63	8	100
2026	23	64	12	100

Age group columns shows percentage shares; rows may not add up to 100 because of rounding.

Source: Based on data from the Technical Group on Population Projections (1996 and 2006) of the National Commission on Population

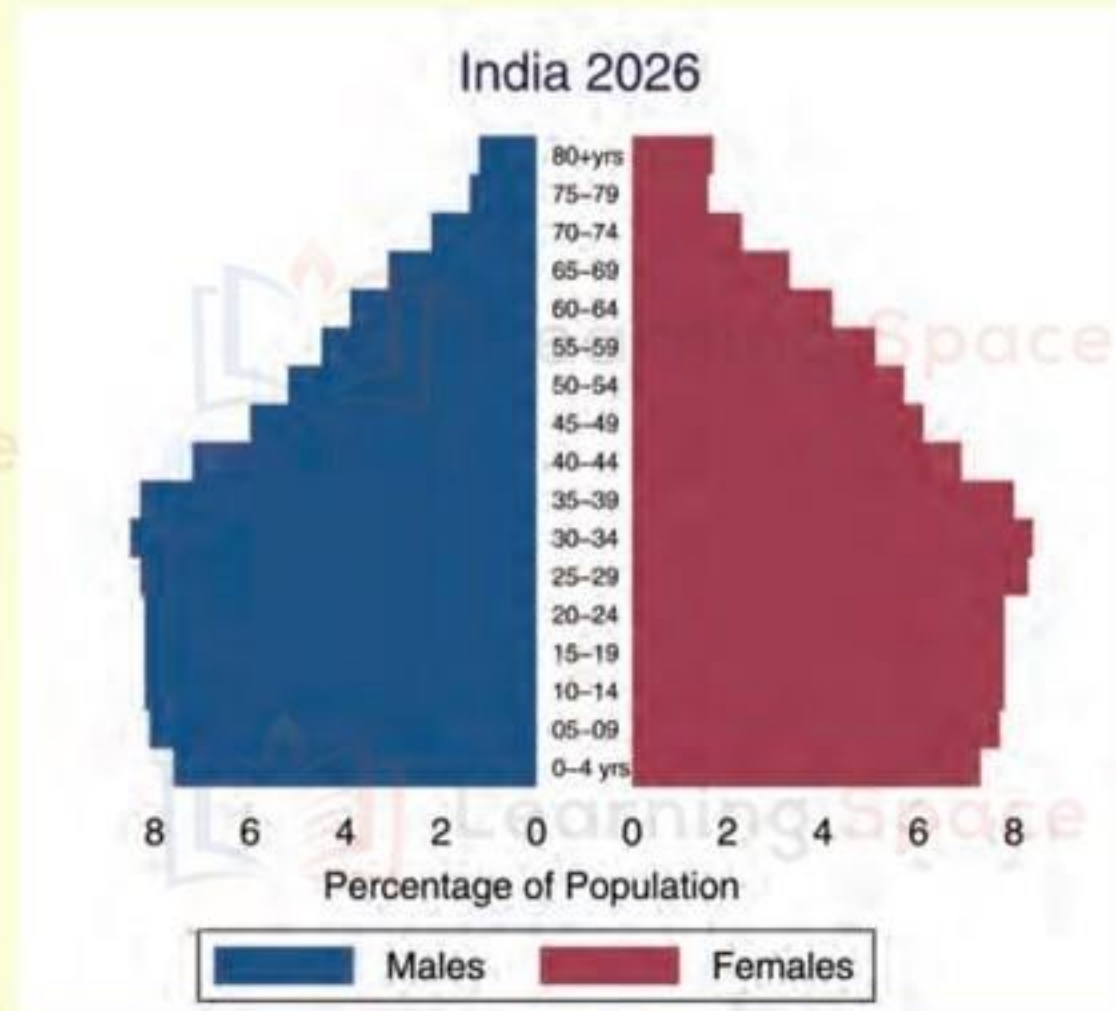

AGE STRUCTURE OF THE INDIAN POPULATION

- 1 Pyramids show the effect of a gradual fall in the birth rate and rise in the life expectancy.
- 2 As more and more people begin to live to an older age, the top of the pyramid grows wider.
- 3 As relatively fewer new births take place, the bottom of the pyramid grows narrower.
- 4 Middle of the pyramid grows wider and wider as its share of the total population increases.
- 5 This creates a 'bulge' in the middle age groups that is clearly visible in the pyramid for 2026.
- 6 The bulge is referred to as the 'demographic dividend'

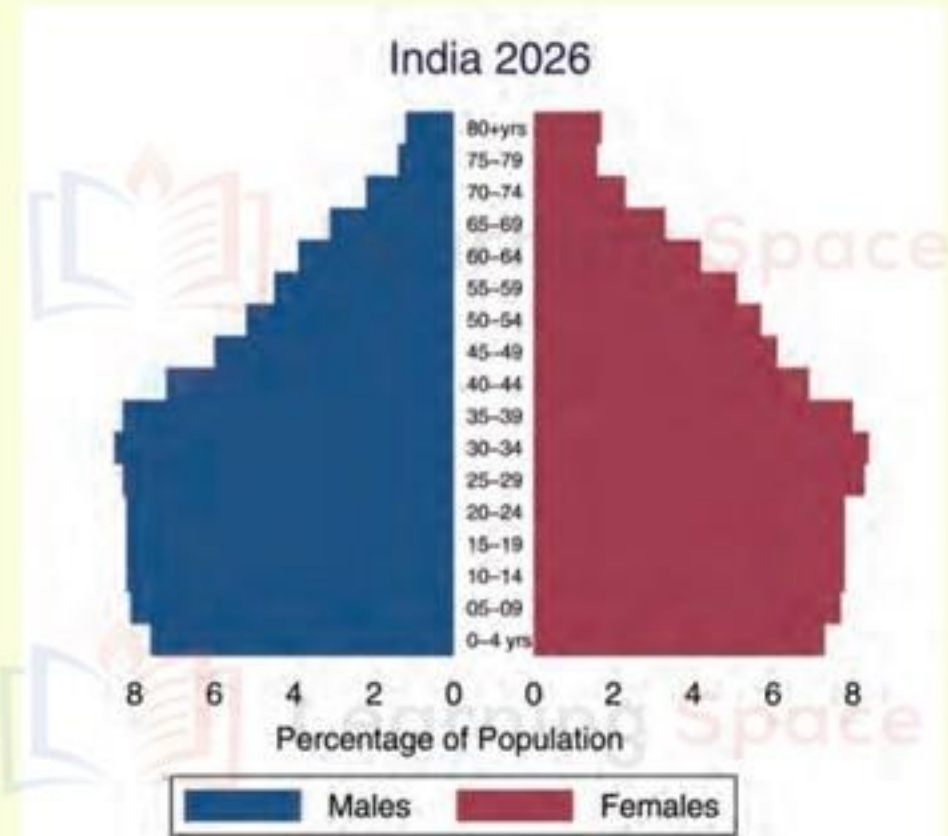

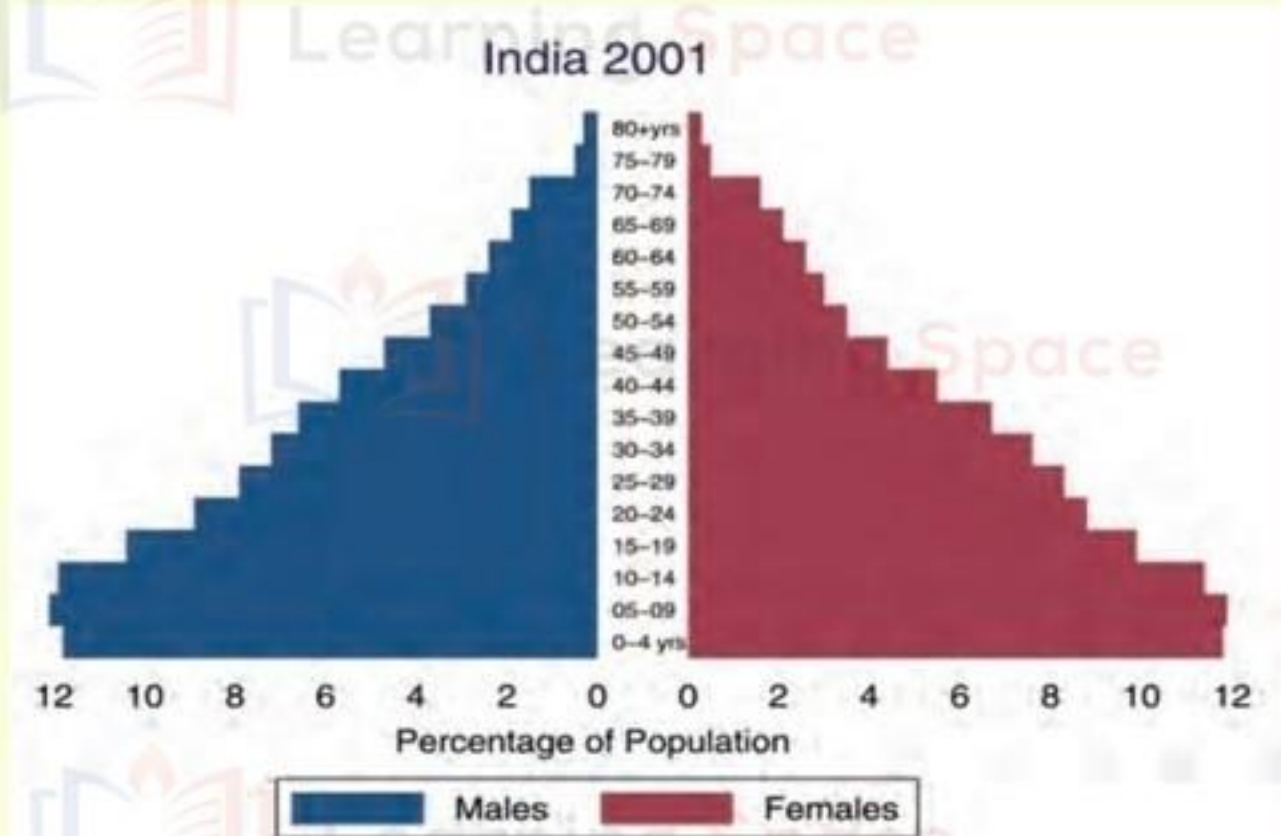

AGE STRUCTURE OF THE INDIAN POPULATION

- 7 But there is nothing automatic about this advantage – it needs to be consciously exploited through appropriate policies.
- 8 As with fertility rates, there are wide regional variations in the age structure as well.
- 9 While a state like Kerala is beginning to acquire an age structure like that of the developed countries, Uttar Pradesh presents a very different picture with high proportions in the younger age groups and relatively low proportions among the aged.
- 10 India as a whole is somewhere in the middle, because it includes states like Uttar Pradesh as well as states that are more like Kerala.

AGE STRUCTURE OF THE INDIAN POPULATION

DEMOGRAPHIC DIVIDEND FOR INDIA

1 India is (and will remain for some time) one of the youngest countries in the world.

2 In 2020, the average Indian will be only 29 years old, compared with an average age of 37 in China and the United States, 45 in Western Europe, and 48 in Japan.

3 Demographic dividend results from an increase in the proportion of workers (15-64 years) relative to non-workers in the population.

4 Changes in the age structure due to the demographic transition lower the 'dependency ratio', or the ratio of non-working age to working-age population, thus creating the potential for generating growth

5 But this needs education and employment to working age groups

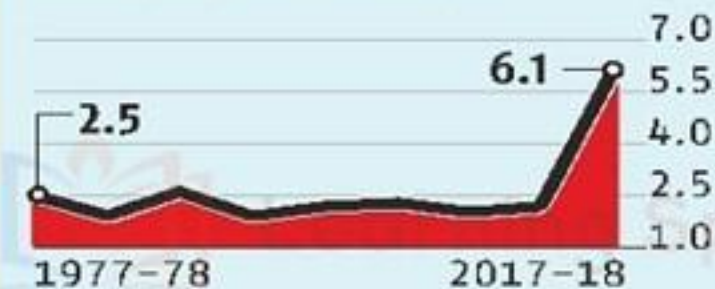

DEMOGRAPHIC DIVIDEND FOR INDIA

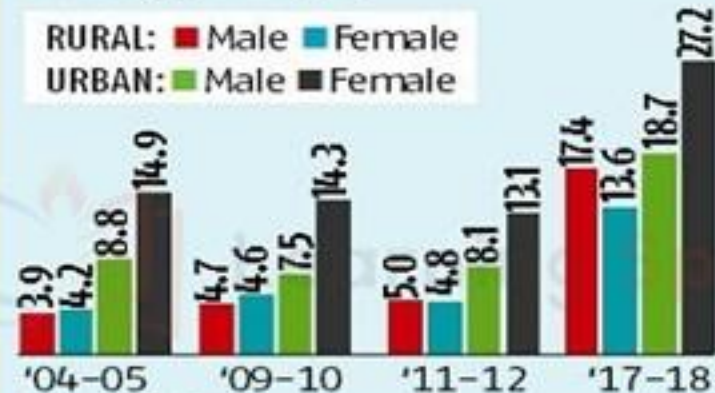

- 6 Real problem is in defining the dependency ratio as the ratio of the non-working age to working-age population, rather than the ratio of non-workers to workers
- 7 As per, Periodic Labour Force Survey (PLFS) the unemployment rate in the country in 2018 was at 5.3% in rural India and 7.8% in urban India, resulting in overall unemployment rate of 6.1%
- 8 But, India is facing a window of opportunity created by the demographic dividend.

FACTS IN FIGURES

Unemployment rate (%)

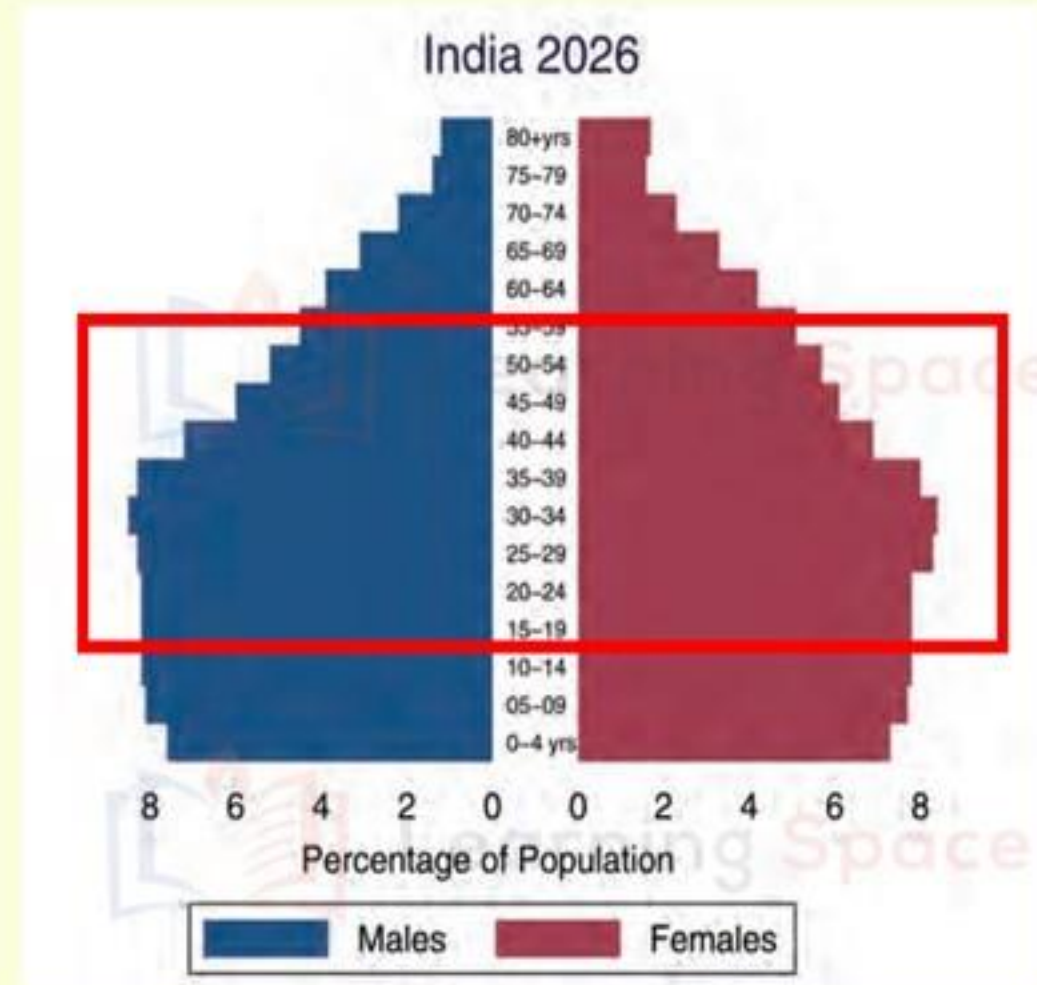

Unemployment rate among youth (%)

Source: NSSO

DEMOGRAPHIC DIVIDEND FOR INDIA

- 9** The total dependency ratio fell from 79 in 1970 to 64 in 2005 and is projected to fall to 48 in 2025 because of continued fall in the proportion of children
- 10** Then rise to 50 by 2050 because of an increase in the proportion of the aged
- 11** State specific policies based on their demographic trend regarding education, health, elderly care, In-migrant and Out-migrant etc are to be designed

DECLINING SEX-RATIO IN INDIA

1 India has had a declining sex-ratio for more than a century from 972 females per 1000 males in 1901 to 927 in 1991 and a moderate increase to 933 in 2001.

2 According to Census of India 2011 sex ratio has increased and now it is 943 females per 1000 males.

3 More critical is the drastic fall in the juvenile/child (0-6 years) sex ratio which is continuously falling (Age specific sex ratios began to be computed in 1961)

THE DECLINING SEX RATION IN INDIA, 1901 - 2011

YEAR	SEX RATIO (ALL AGE GROUPS)	VARIATION OVER PREVIOUS DECADE	CHILD SEX RATIO (0-6 YEARS)	VARIATION OVER PREVIOUS DECADE
1901	972	-	-	-
1911	964	-8	-	-
1921	955	-9	-	-
1931	950	-5	-	-
1941	945	-5	-	-
1951	946	+1	-	-
1961	941	-5	976	-
1971	930	-11	964	-12
1981	934	+4	962	-2
1991	927	-7	945	-17
2001	933	+6	927	-18
2011	943	+10	919	-8

NOTE: The sex ratio defined as the number of females for 1000 males;

Data on age specific sex ratio is not available before 1961

Source: Census of India 2011, Government of India

SEX-RATIO ACROSS STATES

- 1 Lowest child sex ratios are found in the most prosperous regions of India.
- 2 According to the Economic Survey 2018-19, Maharashtra, Punjab, Haryana, Chandigarh and Delhi are having high per capita income and the child sex ratio of these states is still low.

REASONS

- Female infanticide (or the killing of girl babies due to religious or cultural beliefs)
- Dowry in poor families
- Patriarchal Social attitudes
- Availability of ultra sound technology

SEX-RATIO ACROSS STATES

3 Pre-natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act is enacted to prevent sex selective abortions.

4 'Beti-Bachao, Beti-Padhao' is expected to be an important policy to bring attitudinal change and increase the child sex ratio in the country.

LITERACY RATE IN INDIA

- 1 Literacy varies considerably across gender, across regions, and across social groups.
- 2 Literacy rate for women is 16.3% less than the literacy rate for men
- 3 Female literacy has been rising faster than male literacy, partly because it started from relatively low levels.
- 4 Historically disadvantaged communities like the Scheduled Castes and Scheduled Tribes have lower rates of literacy, and rates of female literacy within these groups are even lower.

PERCENTAGE OF POPULATION 7 YEARS OF AGE AND ABOVE				
YEAR	PERSONS	MALES	FEMALES	MALE-FEMALE GAP IN LITERACY RATE
1951	18.3	27.2	8.9	18.3
1961	28.3	40.4	15.4	25.1
1971	34.5	46.0	22.0	24.0
1981	43.6	56.4	29.8	26.6
1991	52.2	64.1	39.3	24.8
2001	65.4	75.9	54.2	21.7
2011	73.0	80.9	64.6	16.3

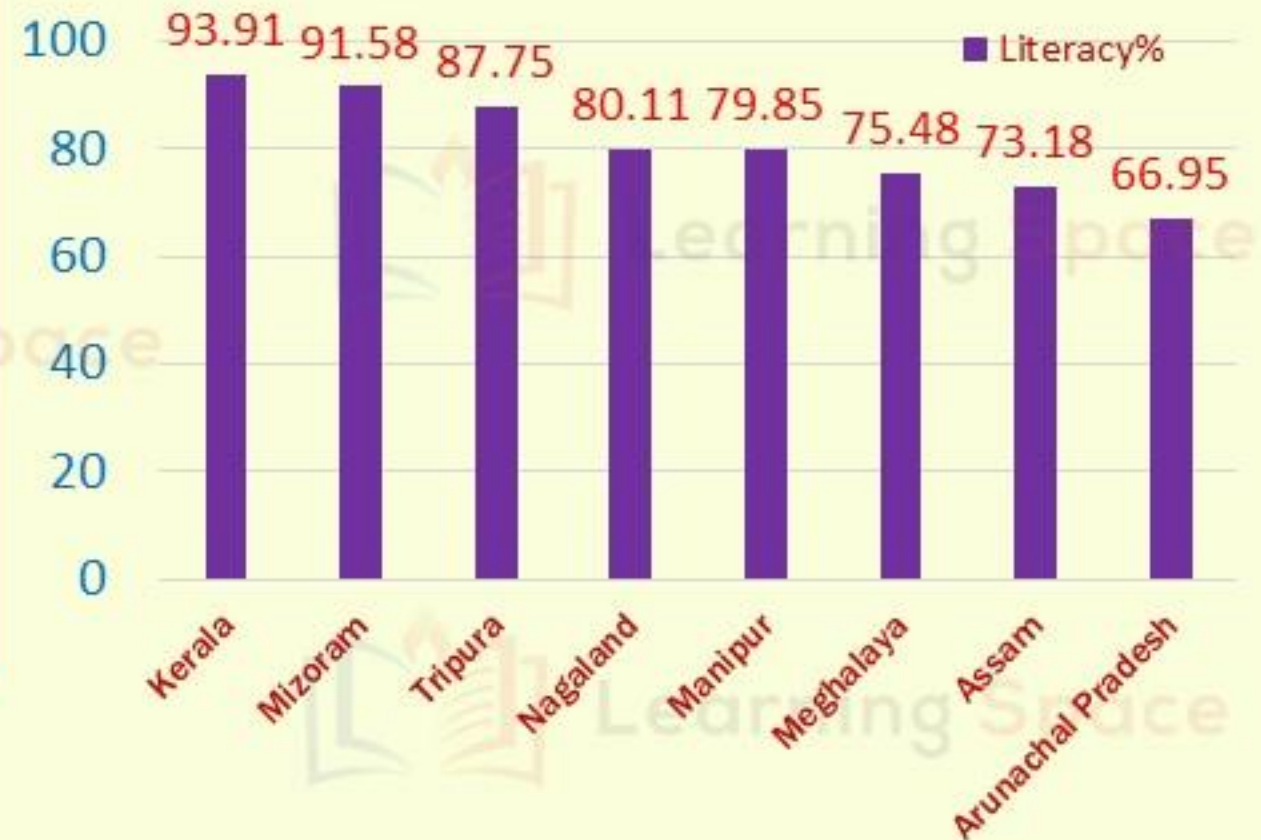

Source: Bose (2001:22), Census of India 2011.

LITERACY RATE IN INDIA

ACCORDING TO 2011 CENSUS

5 Regional variations are still very wide, with states like Kerala approaching universal literacy, while states like Bihar are lagging far behind.

6 Inequalities in the literacy rate tend to reproduce inequality across generations.

POPULATION POLICY IN INDIA

1 India was the first country to explicitly announce such a population policy in 1952 and concretize National Family Planning Programme.

2 **Objectives of this programme:** slow down the rate of population growth through

- ✓ Promotion of various birth control methods
- ✓ Improve public health standards, and
- ✓ Increase public awareness about population and health issues

POPULATION POLICY IN INDIA

3 Family Planning Programme suffered a setback during the years of the National Emergency (1975-76).

4 At this time government tried to intensify the effort to bring down the growth rate of population by introducing a coercive programme of mass sterilization.

5 National Family Planning Programme was renamed as the National Family Welfare Programme after the Emergency and coercion is abandoned.

POPULATION POLICY IN INDIA

NATIONAL POPULATION POLICY (2000)

1 Push for voluntary and informed choice and agreeability of citizens to get maximum benefit from reproductive health services.

2 Curbing the IMR to less than 30 per 1000 live births.

3 Maternal Mortality Rate(MMR) will also be brought down to less than 100 per 1, 00,000 live births.

4 Attain universal immunisation of all children against preventable diseases.

POPULATION POLICY IN INDIA

NATIONAL POPULATION POLICY (2000)

- 5 Act against child marriage.
- 6 Support a target of 80% institutional deliveries and 100% deliveries by trained persons
- 7 Achieve 100 % registration of births, deaths, marriages and pregnancies
- 8 Preventing and controlling all communicable diseases.

National Population Policy
