International Environmental Conventions - 3

CLIMATE CHANGE

The United Nations Framework Convention on Climate Change (UNFCCC)

Aim : To fight against climate change by reducing greenhouse gas emissions from all the countries.

KYOTO PROTOCOL

- Based on **CBDR** with reference to historical responsibility.
- Kyoto Protocol divided countries into two categories
 1. **Historically Polluted Developed Countries** and
 2. **Recently Polluting Developing Countries**

PARIS CLIMATE AGREEMENT

- The Paris Agreement is an agreement within the United Nations Framework Convention on Climate Change (UNFCCC), dealing with greenhouse-gas-emissions mitigation, adaptation, and finance.
- The agreement's text was negotiated by representatives of 196 countries at the 21st Conference of the Parties of the UNFCCC in Paris, and adopted by consensus on 12 December 2015.
- As of now, 197 UNFCCC members have signed the agreement, and 190 have become party to it.
- The Paris Agreement's long-term goal is to keep the increase in global average temperature to well below 2 °C above pre-industrial levels; and to limit the increase to 1.5 °C, since this would substantially reduce the risks and effects of climate change.
- Under the Paris Agreement, each country must determine, plan, and regularly report on the contribution that it undertakes to mitigate global warming.
- No mechanism forces a country to set a specific target by a specific date, but each target should go beyond previously set targets.

PARIS CLIMATE AGREEMENT

AIMS

- a) Holding the increase in the global average temperature to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C above pre-industrial levels.
 - b) Increasing the ability to adapt to the adverse impacts of climate change and foster climate resilience and low greenhouse gas emissions development, in a manner that does not threaten food production;
 - c) Making finance flows consistent with a pathway towards low greenhouse gas emissions and climate-resilient development.
- Contributions each individual country should make to achieve the worldwide goal are determined by all countries individually and are called Intended Nationally Determined Contributions (INDCs).
 - The agreement requires them to be ambitious and represent a progression over time and set with the view to achieving the purpose of this Agreement. The contributions should be reported every five years and are to be registered by the UNFCCC Secretariat.

PARIS CLIMATE AGREEMENT

- **19th COP in Warsaw (2013)**
 - ✓ All countries required to prepare INDCs and present them before COP 21 in Paris.
- **20th COP in Lima (2014)**
 - ✓ Further clarity on form of INDC: not mitigation centric and can include other components as per country priorities.
- The contributions themselves are not binding as they lack the specificity and normative character.
- Also, there is no mechanism to force a country to set a target in their NDC by a specific date and no enforcement if a set target in an NDC is not met. There will be only a "name and shame" system.

INDIA'S INDCs

MITIGATION COMPONENT

- **Goal 1 - Reducing the emissions**
 - ✓ To Reduce the emissions by 33 - 35% by 2030 from 2005 level.
- **Goal 2 - Increase the Share of Non-Fossil Fuel Based Electricity**
 - ✓ To achieve 40% of electric power installed capacity from non-fossil fuel by 2030.
- **Goal 3 - Enhancing Forests Carbon Sink**
 - ✓ To create additional carbon sink of 2.5 -3 billion tons of CO₂ equivalent through additional forest and tree cover.

INDIA'S INDCs

ADAPTATION COMPONENT

■ Goal 1 - Adapting to Climate Change

- ✓ To better adapt to climate change by enhancing investments in development programmes in sectors vulnerable to climate change, particularly agriculture, water resources, Himalayan region, coastal regions, health and disaster management.
- ✓ India has set up a Rs. 350 Crores (\$ 55.6 million) National Adaptation Fund.

■ Goal 2 - Mobilizing Finance

- ✓ To mobilize domestic and new & additional funds from developed countries to implement the above mitigation and adaptation actions.
- ✓ \$ 2.5 trillion (at 2014-15 prices) required for meeting India's climate change actions between now and 2030 as per preliminary estimates.

INDIA'S INDCs

ADAPTATION COMPONENT

■ Goal 3 - Technology Development & Transfer

- ✓ To build capacities, create domestic framework and international architecture for quick diffusion of cutting-edge climate technology in India and for joint collaborative R&D for such future technologies.

■ Goal 4 - Sustainable Lifestyle

- ✓ To put forward and further propagate a healthy and sustainable way of living based on traditions and values of conservation and moderation.

■ Goal 5 - Cleaner Economic Development

- ✓ To adopt a climate friendly and a cleaner path than the one followed hitherto by others at corresponding level of economic development.
