

IAS PRELIMS/MAINS

SCIENCE & TECHNOLOGY

A COMPREHENSIVE COVERAGE

MODULE - 24

INFORMATION & COMMUNICATION TECHNOLOGY (ICT) - 5

ARTIFICIAL INTELLIGENCE

■ DEFINITIONS

1. Artificial Intelligence is a branch of computer science which deals with creating computers or machines which are intelligent.
2. AI is the simulation of human intelligence processes such as learning, reasoning and self-correction by computer systems.

ARTIFICIAL INTELLIGENCE

LEARNING

Acquisition of information and the rules for using the information.

REASONING

using the rules to reach conclusions.

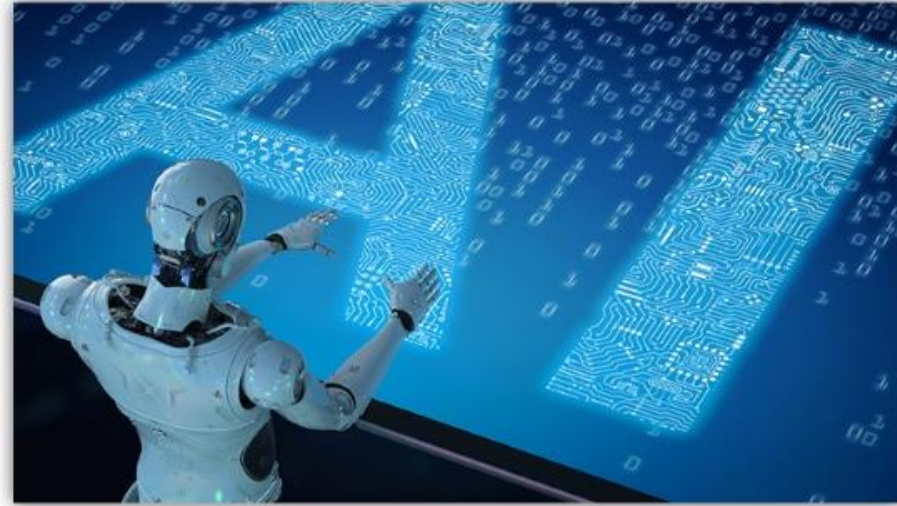

ARTIFICIAL INTELLIGENCE

AI might just be the single largest technology revolution of our live times, with the potential to disrupt almost all aspects of human existence.

AI is of two types:

1. Strong AI/Full AI and
2. Weak AI/Applied AI.

Full AI is also known as General Artificial Intelligence.

EXAMPLES OF ARTIFICIALLY INTELLIGENT TECHNOLOGIES

1

AUTOMATION

- Automation is the process of making a system or process function automatically.
- Machines can be programmed to perform high volume repeatable tasks, with a lot of accuracy, precision and negligible errors.

EXAMPLES OF ARTIFICIALLY INTELLIGENT TECHNOLOGIES

2 NATURAL LANGUAGE PROCESSING (NLP)

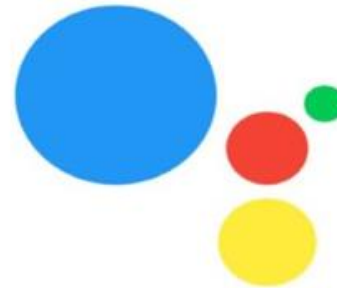

- It is the processing of natural human language and not computer language by a computer.
- Normally humans communicate with computers through machine language, but in NLP computers are able to understand and communicate with humans in the natural language of humans.

“Hey Alexa”

“Hey Siri”

“Hey Google”

3 MACHINE LEARNING

It is a branch of Machine Learning that focusses on identifying patterns in data.

EXAMPLES OF ARTIFICIALLY INTELLIGENT TECHNOLOGIES

5

MACHINE VISION/MACHINE PERCEPTION

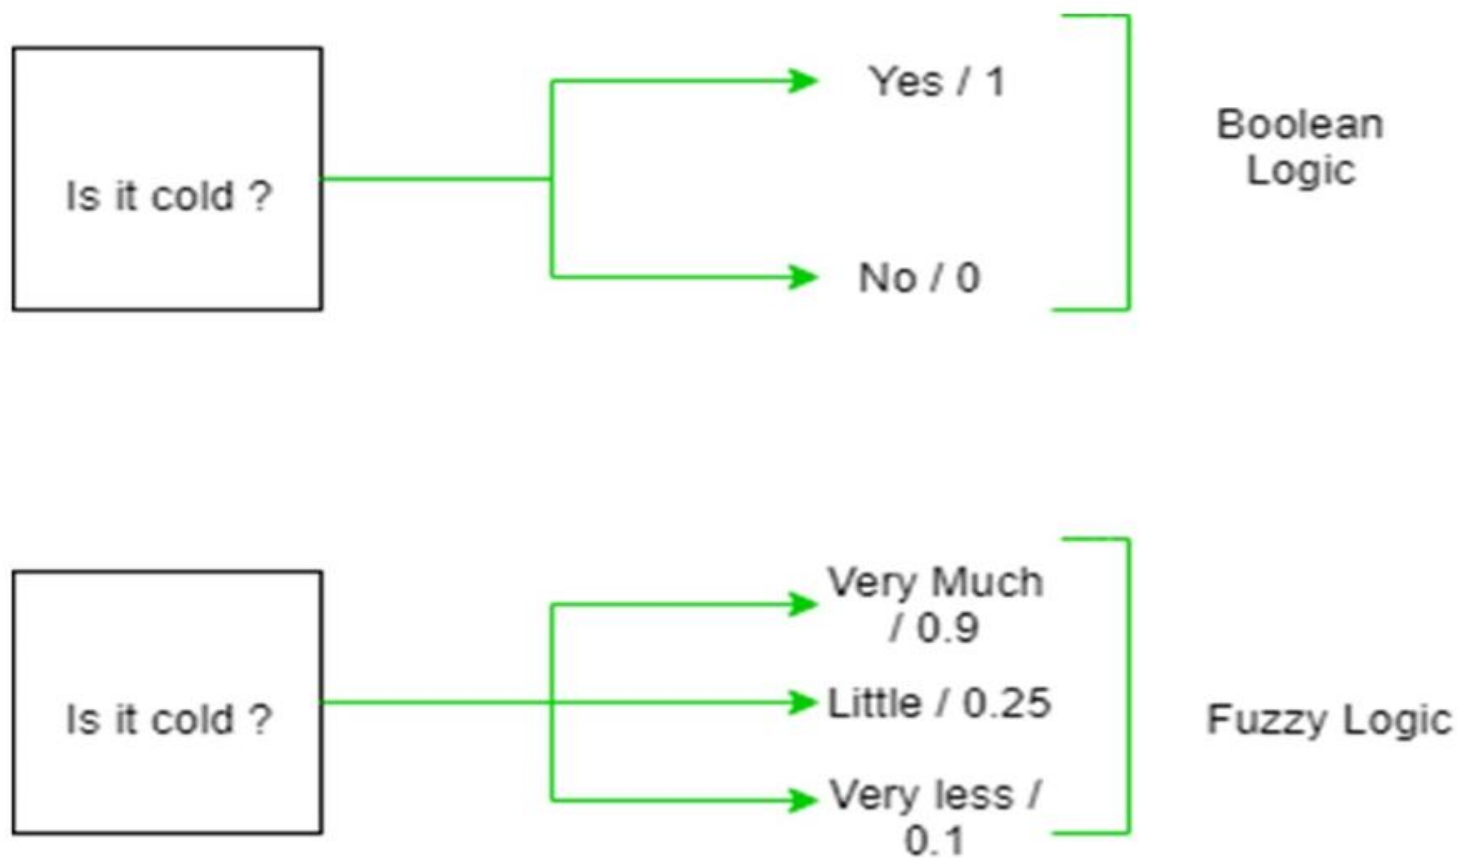

- It is the science of making computers capture and analyse visual information using a camera.
- It is compared to human eyesight, but it isn't bound by limitations.
 - ✓ For example, a computer can be programmed to capture and analyse Infrared Radiation, UV Light, X-Rays etc.
