ARTIFICIAL INTELLIGENCE

AI DEVELOPMENTS IN INDIA

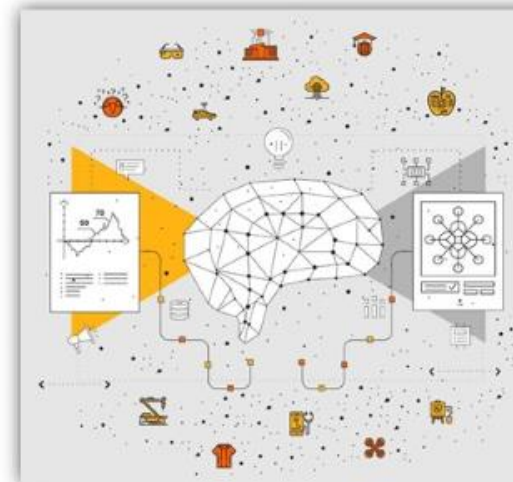

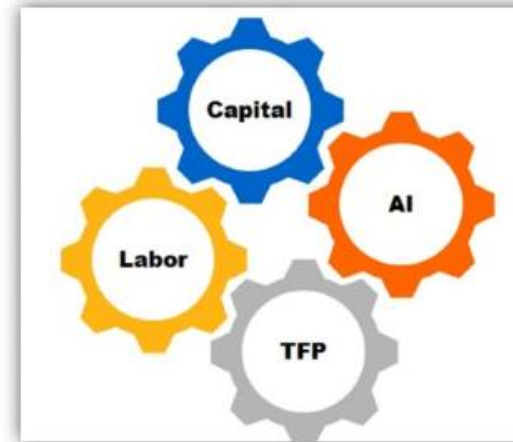

- AI has the potential to add \$ 957 billion to the Indian economy by 2035 – Accenture Report.
- Niti Aayog came up with National Strategy on AI in 2018.
- National AI Portal of India was launched.
- Research – DRDO's Center for Artificial Intelligence and Robotics (CAIR).

ARTIFICIAL INTELLIGENCE

NITI AAYOG – NATIONAL STRATEGY ON AI

- According to the strategy, AI in India can be studied under three headings
 - ✓ Opportunity
 - ✓ AI for Greater Good
 - ✓ AI Garage for 40% of the world

1 OPPORTUNITY - THE ECONOMIC IMPACT OF AI FOR INDIA

- AI is emerging as a new factor of production, augmenting the traditional factors of production.
- AI has the potential to overcome the physical limitations of capital and labour, and open up new sources of value and growth.
- From an economic impact perspective, AI has the potential to push growth by enabling
 - a) **Intelligent automation.**
 - a) **Labour and Capital Augmentation** - enabling humans to focus on parts of their role that add the most value, complementing human capabilities and improving capital efficiency.
 - b) **Innovation Diffusion** - propelling innovations as it diffuses through the economy. AI innovations in one sector will have positive consequences in another, as industry sectors are interdependent based on value chain.

ARTIFICIAL INTELLIGENCE

2 AI FOR GREATER GOOD

Social development and inclusive growth

ARTIFICIAL INTELLIGENCE

3 AI GARAGE FOR 40% OF THE WORLD

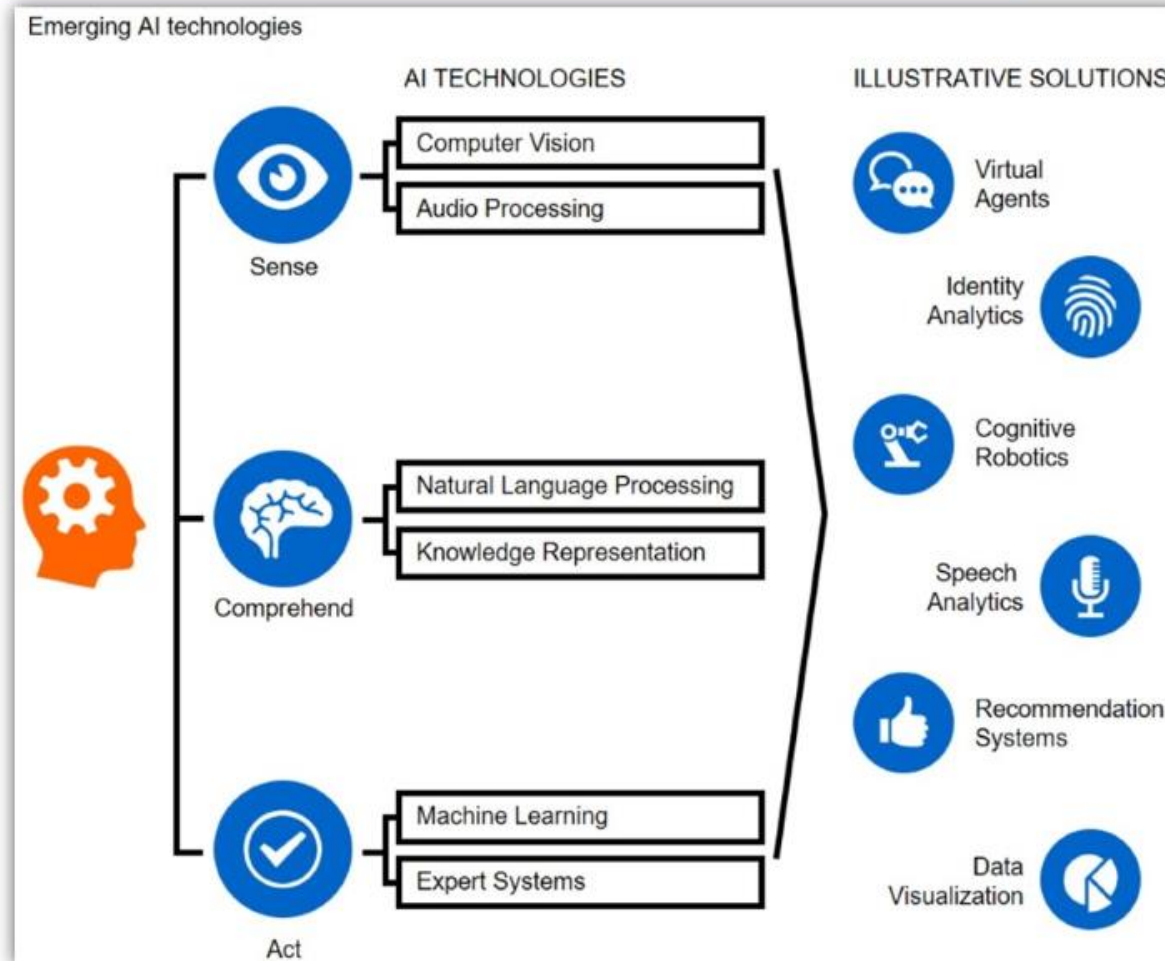

- Solution provider of choice for the emerging and developing economies (ex-China) across the globe.
 - India provides a perfect “playground” for enterprises to develop scalable solutions which can be easily implemented in the rest of the developing and emerging economies.
 - Simply put, solve for India means solve for 40% or more of the world.
- ✓ Example – An AI based solution for early diagnosis of tuberculosis (one of the top-10 causes of deaths worldwide), could easily be rolled out to countries in South East Asia or Africa, once developed and refined in India. Beyond healthcare, AI technologies in the other sectors including agriculture, education and mobility can transform the world.

ARTIFICIAL INTELLIGENCE

FOCUS AREAS FOR AI INTERVENTION IN INDIA ACCORDING TO THE STRATEGY PAPER

- Healthcare
- Agriculture
- Education
- Smart Cities and Infrastructure
- Smart Mobility and Transportation
