

ETHICS, INTEGRITY & APTITUDE

HUMAN VALUES

MODULE - 9

**SIGNIFICANCE & VALUE
THEORIES**

SIGNIFICANCE OF VALUES

By accepting binding values and striving to realize them individually and collectively, **personal aspirations** and **social integration** become focused and meaningful.

Values play an important role in the **integration and fulfilment** of man's basic impulses and desires in a stable and consistent manner appropriate for his living.

They **build up societies** and integrate social relations among the members of the society.

Values are the **effective cultural elements** which **shape the elements** of the **individuals** as well as **members of a community** that holds together. They mould the ideal **dimensions** of **personality** and **range and depth** of culture.

They influence people's behaviour and serve as criteria for evaluating the actions of others and have a great role to play in the conduct of social life.

Their importance is independent of the circumstances. For example, even if we may act in an unfair manner, fairness still has a value.

In an organization, values serve as a framework for the behaviour of its members. In this regard, an organization's values are reflected in the specific behaviours of its members, and not just in its mission statement.

Values have a great role to play in the conduct of social life as they **help create norms** to guide day-to-day behaviour.

SIGNIFICANCE OF VALUES

When we use our values to make decisions, we **make a deliberate choice to focus on what is important to us**. When values are shared, they build internal cohesion in a group.

For the well-being of the community, it is **necessary to have shared rules that guide the behaviour of its members**, otherwise the community will not function satisfactorily for the majority.

Values are the **motive power behind purposeful action**. They are the **ends to which we act**.

Values are essential to ethics as ethics deals with human actions and the choices of those human actions and determines what values should be pursued or not.

ROKEACH'S THEORY

Dr Milton Rokeach

Dr Milton Rokeach claimed that the **total number of values** a person possesses is **relatively small**; all people everywhere possess the **same values to different degrees**.

He saw the value system as a **hierarchical organisation**, a rank ordering, of ideals or values in terms of importance.

He operationalised values as modes of conduct and endstates, namely, **instrumental and terminal values**.

ROKEACH'S THEORY

INSTRUMENTAL VALUES

MORAL VALUES

COMPETENCE VALUES

TERMINAL VALUES

SOCIAL VALUES

PERSONAL VALUES

He further divided **instrumental values** into **two categories**: **Moral values** are concerned with interpersonal modes of conduct (e.g., *forgiveness, helpfulness*), while **competence values** are concerned with intrapersonal ones (e.g., *logical, imaginative*).

Similarly, he classified **terminal values** as **personal and social**. Personal values include self-centred end-states (e.g., *self-respect, inner harmony*), and social values involve socially-centred ones (e.g., *equality, a world at peace*).

ROCKEACH'S SEVEN FACTORS IN VALUE

1

**IMMEDIATE GRATIFICATION VS
DELAYED GRATIFICATION**

a comfortable life, pleasure, cleanliness
vs wisdom, inner harmony, logic

2

**COMPETENCE VS RELIGIOUS
MORALITY**

logic, imagination, intellectuality
vs forgiveness, salvation, being helpful

3

**SELF-CONSTRICTION VS
SELF-EXPANSION**

obedience, politeness, honesty
vs broadmindedness, capability

4

**SOCIAL VS PERSONAL
ORIENTATION**

national security, equality, freedom
vs true friendship, self-respect

ROKEACH'S SEVEN FACTORS IN VALUE

5

SOCIETAL SECURITY **VS**
FAMILY SECURITY

equality, being helpful, imagination
vs ambition, responsibility, capability

6

RESPECT **VS** LOVE

social recognition, self-respect **vs** mature
love, being loving

7

INNER-DIRECTED **VS**
OUTER-DIRECTED

courage, independence **vs** politeness

Dr Milton Rokeach found **seven factors in values**.

BOND'S FACTORS IN VALUE

1

COMPETENCE **VS**
SECURITY

independence, capability, imagination **vs**
family security, world of peace

2

SOCIAL RELIABILITY **VS**
BEAUTY

responsibility, politeness, self-control,
Obedience **vs** world of beauty

3

POLITICAL HARMONY **VS**
PERSONAL SOCIABILITY

equality, world of peace, social justice
vs being cheerful, loving, cleanliness

4

PERSONAL MORALITY **VS**
SUCCESS

forgiveness, being helpful, honesty **vs**
social recognition, comfortable life

Bond (1988) applied the Rokeach Value Survey in a multi-culture study and found **four factors in values.**

Wolfgang Bilsky

*Schwartz and Bilsky proposed **seven distinct motivational types of values**, for which they also found empirical evidence.*

- **Pro-social:** Active protection or enhancement of the welfare of others.
- **Restrictive conformity:** Restraint of actions and impulses likely to harm others and violate sanctioned norms.
- **Enjoyment:** pleasure, sensuous, and emotional gratification.
- **Achievement:** Personal success through demonstrating competence.
- **Maturity:** Appreciation, understanding, and acceptance of oneself, others, and the surrounding world.
- **Self-direction:** Independent thought and action – choosing, creating, exploring.
- **Security:** Safety, harmony, and stability of society, of groups with whom one identifies, relationships, or of self.

SCHWARTZ'S VALUE THEORY

The values theory defines **ten broad values** according to the **motivation** that underlies each of them.

These values are **likely to be universal** because they are grounded in one or more of three universal requirements of human existence with which they help to cope.

These requirements are **needs of individuals as biological organisms**, **requisites of coordinated social interaction**, and **survival and welfare needs of groups**.

Defining values as goals supports the argument that *values serve the interest of a social entity, an individual, and/or a group*

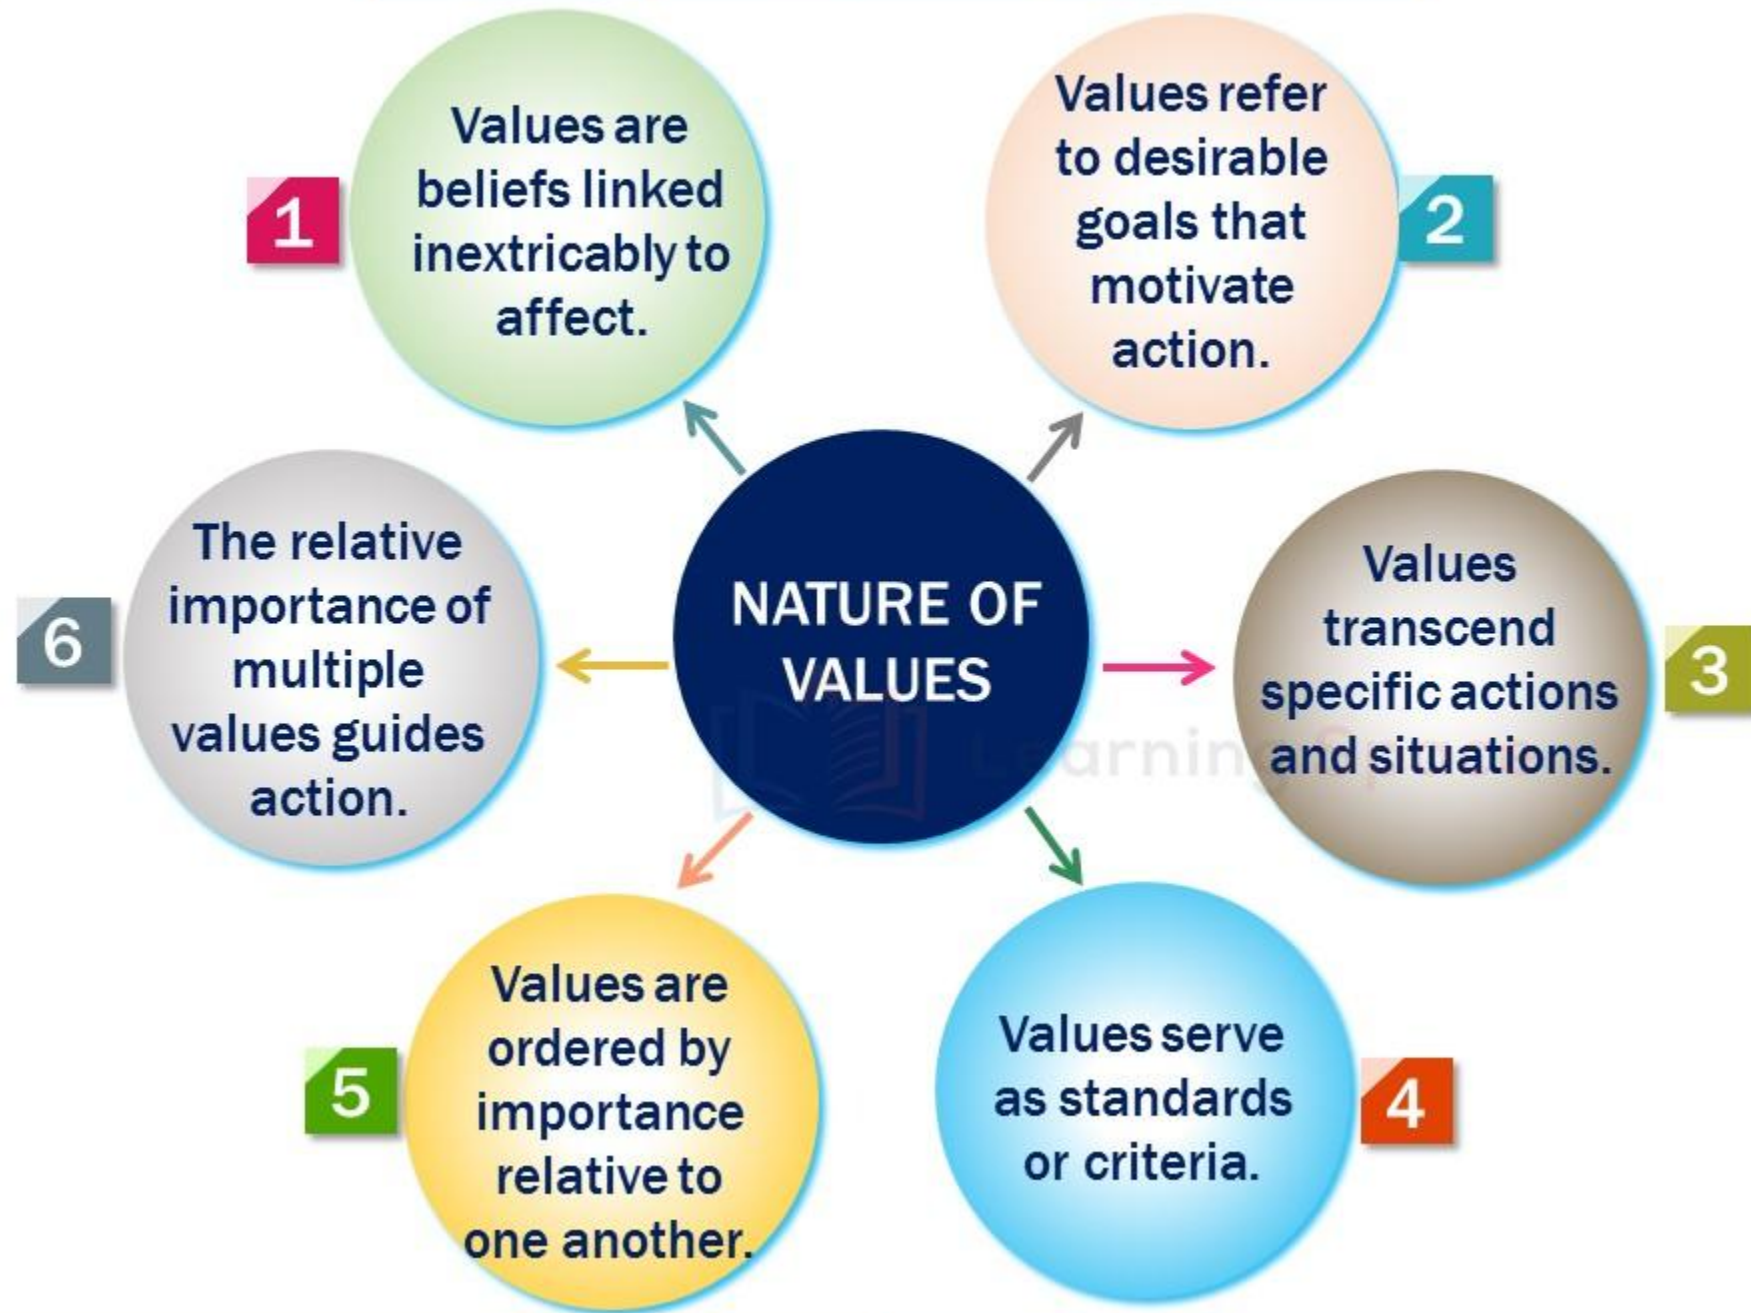

**GOAL**

Each of the ten universal values has a **central goal** that is the **underlying motivator**.

As individuals cannot cope successfully with the **requirements of human existence on their own**, people must articulate appropriate **goals to cope** with them, communicate with others about them, and gain cooperation in their pursuit.

Values are the **socially desirable concepts** used to represent these goals mentally and the **vocabulary** used to express them in social interaction.

Schwartz explains that defining values as goals supports the argument that **values** serve the interest of a social entity, an individual, and/or a group.

NATURE OF VALUES

1. **Linked to affect:** when values are activated, they become infused with feeling. If independence is valued by you, you feel happy to get it.
2. **Desirable goals that incite action:** People for whom social order, justice, and helpfulness are important values are motivated to pursue these goals.
3. **Transcend situation and action:** Obedience and honesty values, for example, may be relevant in the workplace or school, in business or politics, with friends or strangers. This feature *distinguishes values from norms and attitudes that usually refer to specific actions, objects, or situations.*
4. **Serve as standards:** Values guide the selection or evaluation of actions, policies, people, and events. People decide what is good or bad, justified or illegitimate, worth doing or avoiding, based on possible consequences for their cherished values.
5. **Ordered by importance:** People's values form an ordered system of priorities that characterize them as individuals. Do they attribute more importance to achievement or justice, to novelty or tradition?
6. **Relative importance guides actions:** Any attitude or behavior typically has implications for more than one value.

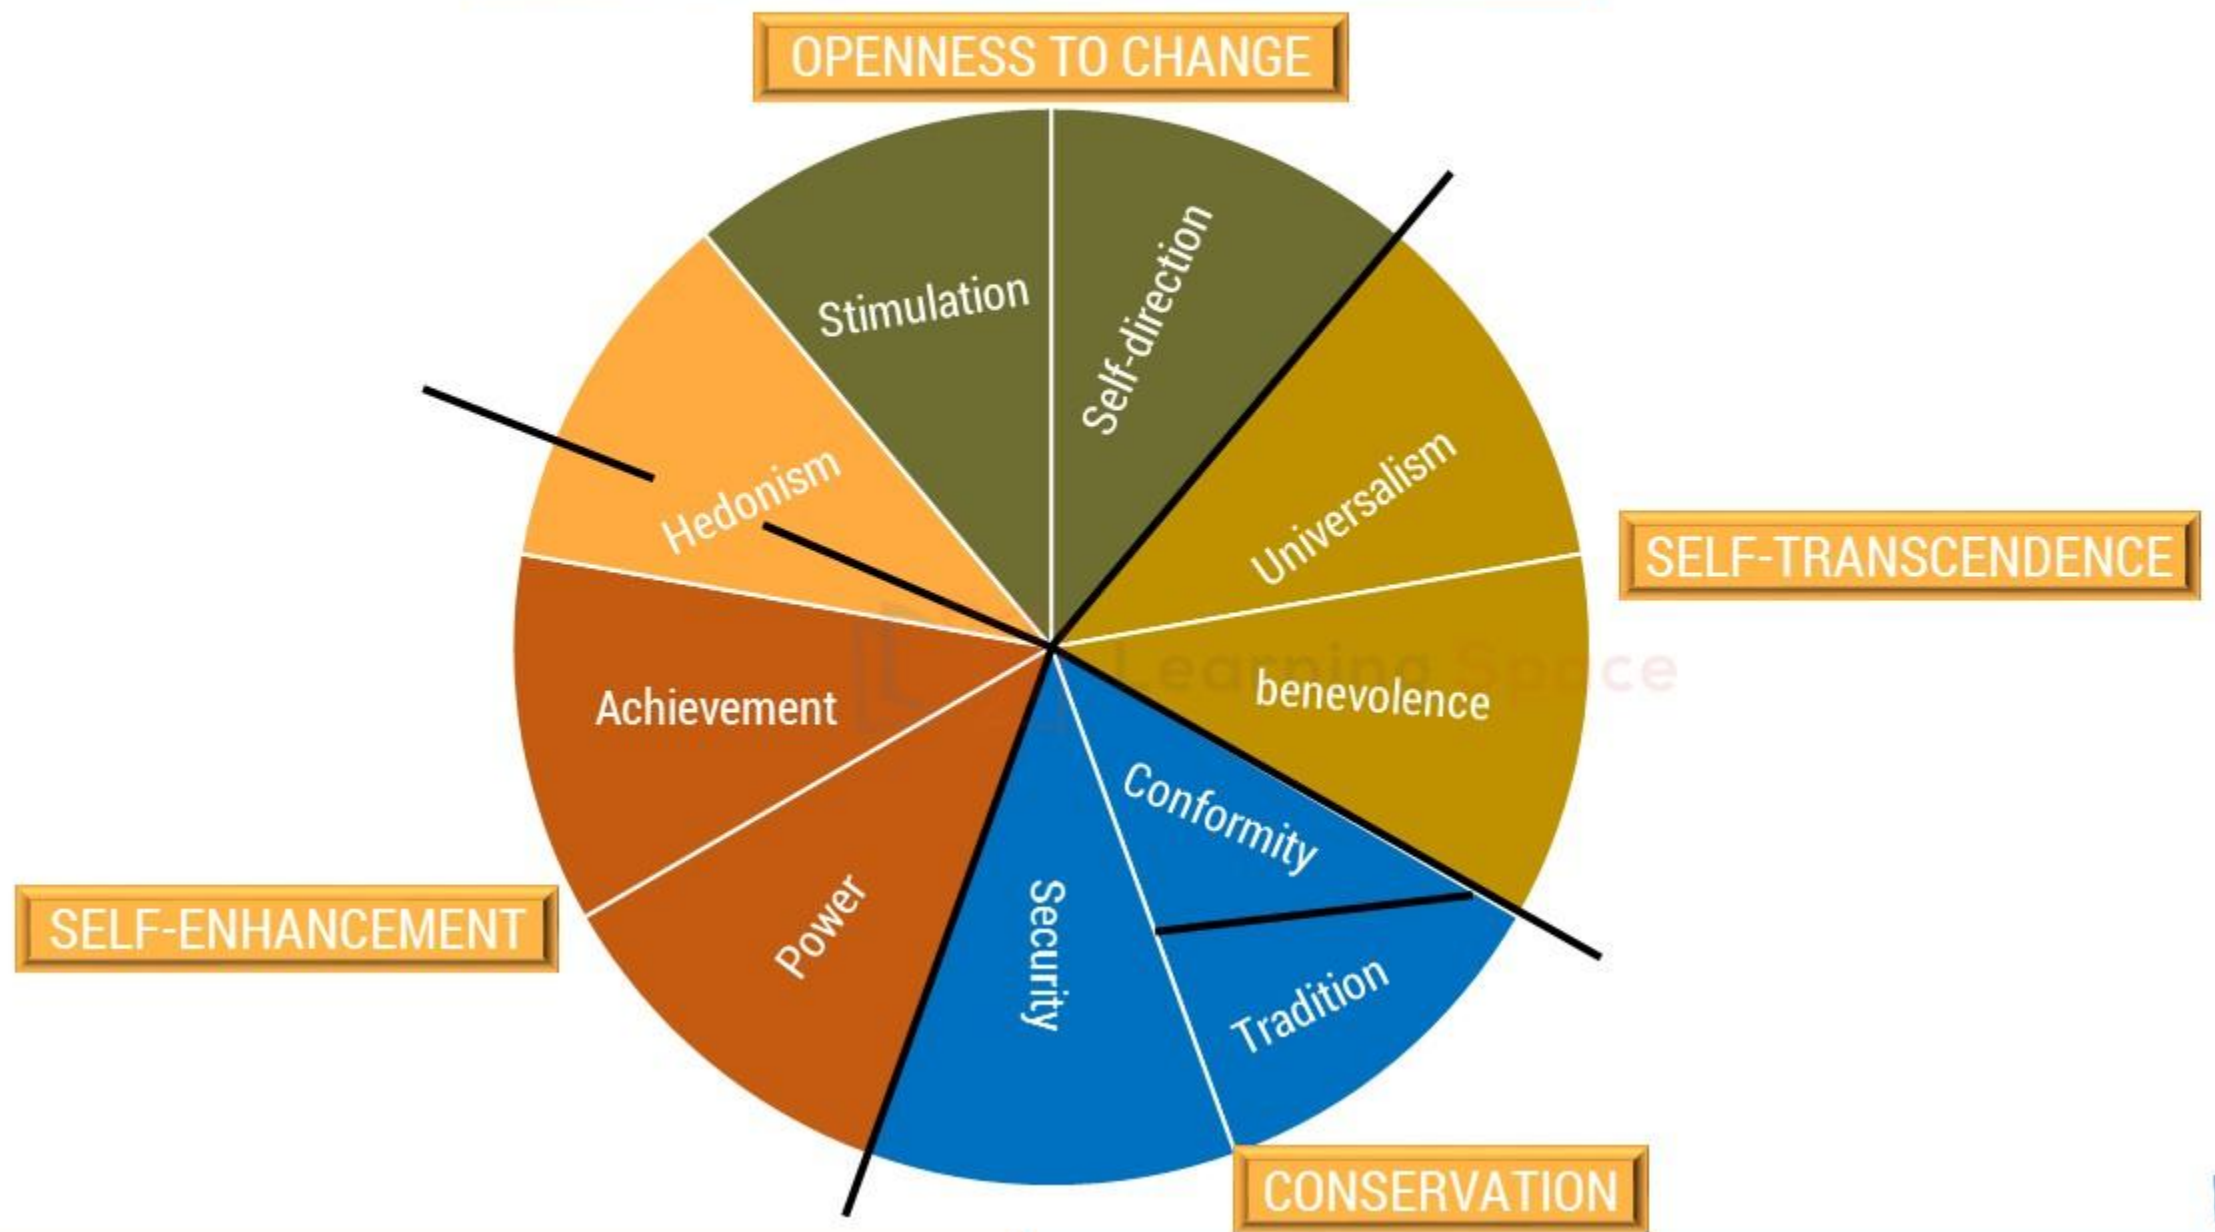

Shalom H
Schwartz

The Theory Of Basic Human Values defines ten broad values according to the motivation that underlies each of them. They are organised in four higher-order groups: *Openness to change, Self-enhancement, Conservation and Self-Transcendence.*

The theory also explains how these ten values are interconnected and influence each other, since the pursuit of any of the values results in either an accordance with one another (conformity and security) or a conflict with at least one other value (benevolence and power).

ETHICS, INTEGRITY & APTITUDE

THEORETICAL LOCATION OF THE VALUES

1

OPENNESS TO CHANGE

Self-Direction:

Independent thought and action—
choosing, creating, exploring.

Stimulation:

Excitement, novelty and challenge in life.

2

SELF-ENHANCEMENT

Hedonism:

Pleasure or sensuous gratification for
oneself.

Achievement:

Personal success through demonstrating
competence according to social
standards.

Power:

Social status and prestige, control or
dominance over people and resources.

3

CONSERVATION

Security:

Safety, harmony, and stability of society, of relationships, and of self.

Conformity:

Restraint of actions, inclinations, and impulses likely to upset or harm others and violate social expectations or norms.

Tradition:

Respect, commitment, and acceptance of the customs and ideas that one's culture or religion provides.

4

SELF-TRANSCENDENCE

Benevolence:

Preserving and enhancing the welfare of those with whom one is in frequent personal contact (the 'in-group').

Universalism:

Understanding, appreciation, tolerance, and protection for the welfare of all people and for nature.
