

KEY TERMINOLOGY

ECONOMY

- Social Security
- Poverty
- Poverty Line
- CSO
- NSSO

MODULE - 12

- Nutrition
- Malnutrition
- Under Nutrition
- Hidden Hunger
- Micronutrients

KEY TERMINOLOGY IN ECONOMY

SELF EMPLOYED

SELF EMPLOYED

- Those who operate their own farm or non-farm enterprises or are engaged independently in a **profession or trade with one or a few partners**.
- They have **freedom to decide how, where and when to produce and sell or carry out their operations**.
- Their earning is determined wholly or mainly by **sales or profits from their enterprises**.

SOCIAL SECURITY

SOCIAL SECURITY

- A Government or privately established system of welfare measures.
- They are of security for elderly, disabled, destitutes, widows and children.
- They are in the form of pension, gratuity, provident fund, maternal benefits, healthcare etc.

POVERTY LINE

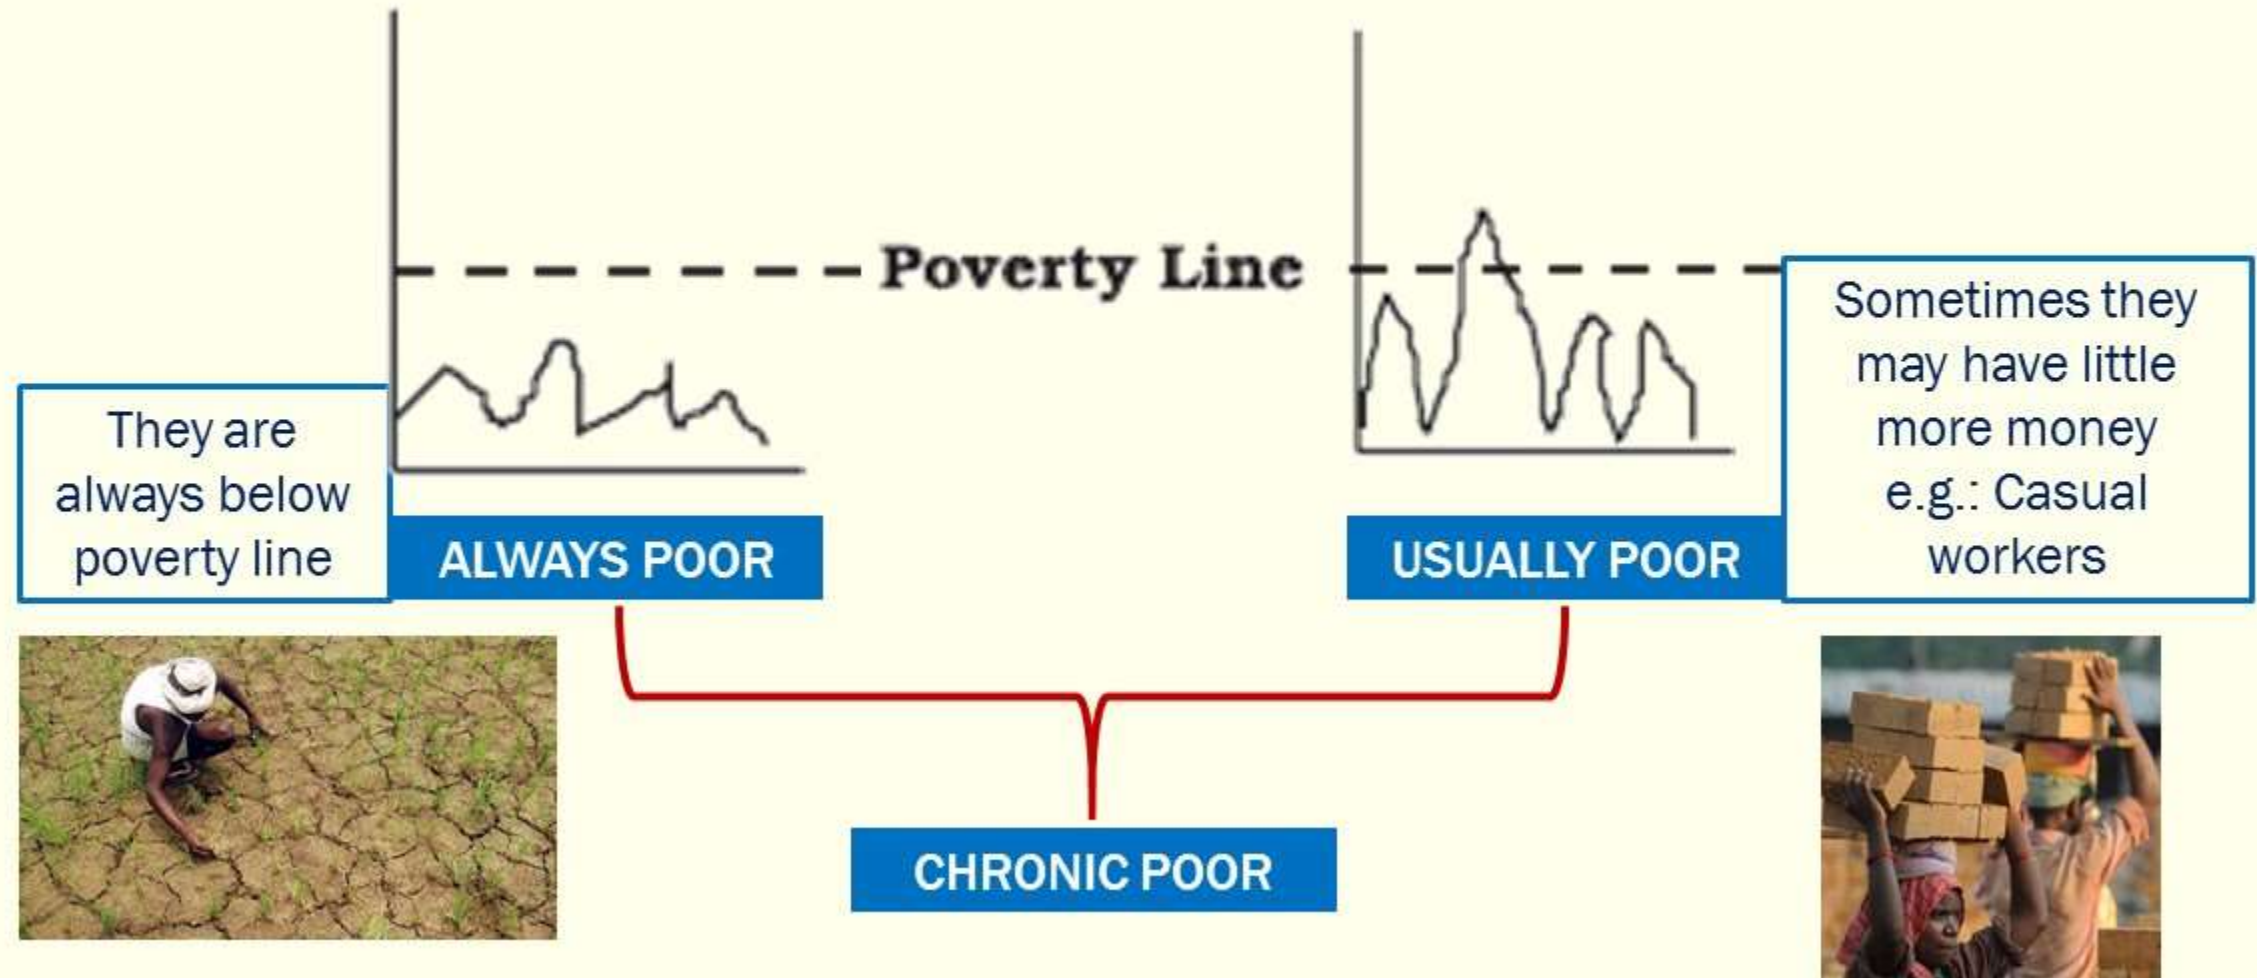

POVERTY LINE

- The per capita expenditure on **certain minimum needs of a person including food intake of a daily average of 2,400 calories** in rural areas, **2,100 calories** in urban areas.
- This is the monetary value of per capita expenditure of minimum calorie intake along with certain basic needs that was estimated at **2,400 calories for a rural person** and **2,100 for a person in urban area**.

KEY TERMINOLOGY IN ECONOMY

POVERTY

KEY TERMINOLOGY IN ECONOMY

Learning Space

ALWAYS POOR

- Landless labourers
- Marginal farmers in dry areas
- Casual workers

KEY TERMINOLOGY IN ECONOMY

USUALLY POOR

- Casual labourers
- Small farmers in dry areas

MARGINAL FARMER

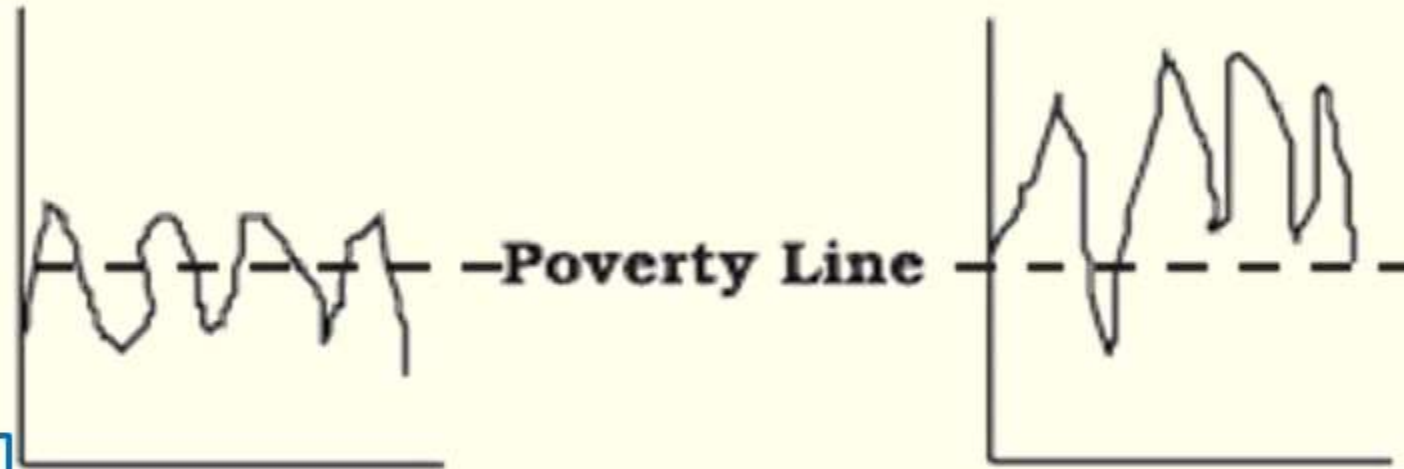

*Owner / Tenant of
agricultural land up to 1
Hectare (2.5 acres)*

SMALL FARMER

*Owner / Tenant of
agricultural land from 1
to 2 Hectares (2.5 to 5
acres)*

KEY TERMINOLOGY IN ECONOMY

POVERTY

They regularly move in and out of poverty

CHURNING POOR

OCCASIONALLY POOR

They are rich most of the time, may sometimes have a patch of bad luck

TRANSIENT POOR

CHURNING POOR

SEASONAL WORKERS

SMALL FARMER

KEY TERMINOLOGY IN ECONOMY

OCCASIONALLY POOR

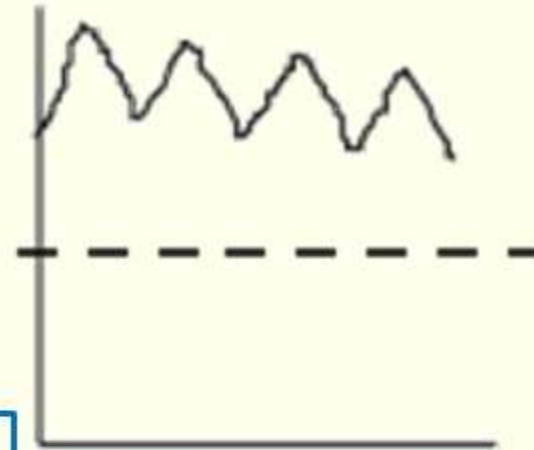

**RICH FARMERS IN PROTECTED
IRRIGATION AREAS**

SMALL POULTRY FARM

POVERTY

Poverty Line

They are always non
poor

NEVER POOR

KEY TERMINOLOGY IN ECONOMY

NEVER POOR

A BUSINESSMAN

EMPLOYEES OF INDIAN
RAILWAYS

CENTRAL STATISTICS OFFICE

Government of India
**Ministry of Statistics and
Programme Implementation**

CENTRAL STATISTICS OFFICE

It compiles and releases data for various macro economic indices like GDP, IIP, Consumer Price Index etc.

- It is responsible for the preparation of national accounts, which includes **Gross Domestic Product, Government and Private Final Consumption Expenditure, Fixed Capital Formation** and other macro-economic aggregates
- Annual publication, titled “**National Accounts Statistics**” is also published.
- Preparation of comparable estimates of **State Domestic Product (SDP)**.
- Compiles All **India Index of Industrial Production(IIP)**
- It conducts Economic Censuses and **Annual Surveys of Industries (ASI)**,

NATIONAL SAMPLE SURVEY OFFICE

Government of India
**Ministry of Statistics and
Programme Implementation**

NATIONAL SAMPLE SURVEY OFFICE

This organisation undertakes field level surveys to look at various socio economic indicators like indices with regard to poverty, health, education etc.

- It is responsible for conduct of large scale sample surveys in **diverse fields on All India basis**.
- Primarily data are collected through **nation-wide household surveys** on various **socio-economic subjects**
- Besides these surveys, NSSO collects data on **rural and urban prices** and plays a significant role in the **improvement of crop statistics** through supervision of the area enumeration and crop estimation surveys of the State agencies.

1 NEONATAL MORTALITY RATE (NMR)

Death of a child during the first 28 days of life per 1,000 live births.

2 INFANT MORTALITY RATE

Probability of dying between birth and exactly before 1 year of age, expressed per 1,000 live births.

3 UNDER-FIVE MORTALITY RATE

Probability of dying between birth and before attaining 5 years of age, expressed per 1,000 live births.

4 THE MATERNAL MORTALITY RATIO (MMR)

Death of a woman, while pregnant or within 42 days of termination of pregnancy. It is calculated per 1,00,000 live births

5 STILLBIRTH

A baby, who is born without any signs of life at or after 28 weeks of gestation.

NUTRITION

NUTRITION

- It is the intake of food considered in relation to the body's dietary needs
- Adequate well balanced diet is called good nutrition
- Poor nutrition may lead to reduced immunity, increased susceptibility to diseases, impaired physical and mental development and reduced productivity.
- Good nutrition along with regular physical activity is the corner stone of good health.

KEY TERMINOLOGY IN ECONOMY

CEREALS

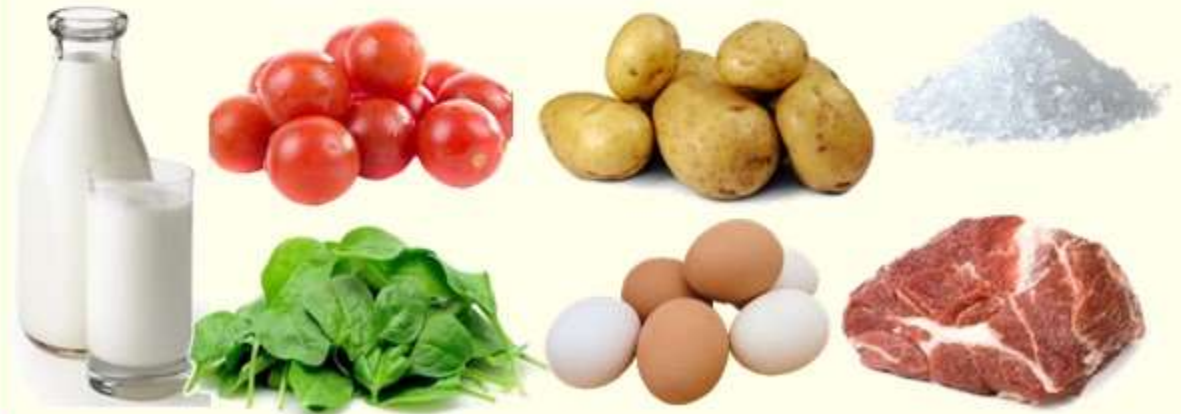

PULSES

VITAMINS

MINERALS

MALNUTRITION

- 1 It comes in many forms from **hunger to obesity**.
- 2 It is **bad nutrition**.
- 3 It is **eating either too much food or too little food**.
- 4 Hundreds of millions of people around the world are **starving, while half a billion are obese**.
- 5 To prevent malnutrition, **breastfeeding babies and access to a healthy diet** for everyone is very much essential.

POVERTY LINE ... ALWAYS CONTROVERSIAL

1979

Based on expenditure and calorie intake of 2400 for rural and 2100 for urban areas specified.

SURESH TENDULKAR
COMMITTEE

People living on less than Rs. 27 a day in rural and Rs. 33 a day in urban areas were considered poor in 2011-12

RANGARAJAN
COMMITTEE

People living on less than Rs. 32 a day in rural areas and Rs. 47 a day in urban areas were considered poor in 2011-12

WORLD BANK

However, the world bank poverty line is \$1.90 a day on PPP basis.

UNDER NUTRITION

UNDER NUTRITION

- It is defined as the outcome of insufficient food intake.
- It results into repeated infectious diseases
- Because of under nutrition, they can no longer maintain natural body capacities such as growth, resisting infections, learning abilities and recovery from diseases etc.
- Poor feeding of infants and young children results in susceptibility for several diseases.
- Because of under nutrition, underweight for one's age, too short for one's age (stunted), dangerously thin for one's height (wasted) and deficient in vitamins and minerals (Micronutrient malnutrition results)

1 STUNTED

Those with low height relative to age.

- Stunting results due to **chronic under nutrition**
- Inadequate nutrition over a **long periods of time**
- It may be due to **poor maternal nutrition, poor infant and young child feeding practices**
- It may be due to **repeated infections**

2 WASTED

Kids with low weight relative to their height

- Wasting takes place due to **periodic acute under nutrition**
- That means **wasting can take place due to rapid deterioration in nutritional status over a short period of time.**

3 UNDERWEIGHT

Those with low weight relative to age.

4 ANAEMIC

Not enough red blood cells due to lack of sufficient iron.

VITAMINS

HIDDEN HUNGER

MINERALS

- 1 It is lack of vitamins and minerals.
- 2 It occurs when the quality of food that people eat does not meet their nutrient requirements.
- 3 The food is deficient in micronutrients such as vitamins and minerals.
- 4 They need them for their growth & development.
- 5 Women and children in families with low income often do not get enough vitamin A, Iodine and Iron.
- 6 This limits their growth, development, health and working capacity.
- 7 Ensuring people get vitamins, minerals and essential nutrients will help prevent malnutrition.

KEY TERMINOLOGY IN ECONOMY

MICRONUTRIENTS

MICRONUTRIENTS

- Micronutrients are **nutrients required by organisms** throughout life in small quantities
- They are needed **only in minuscule amounts**.
- These are the **magic wands**.
- This enable the **body to produce enzymes, hormones and other substances** essential for proper **growth and development**.
- The consequences of **lack of micronutrients are severe**.
- **Iodine, vitamin A as well as iron** are most important, when we look at micronutrients.

KEY TERMINOLOGY IN ECONOMY

MAJOR MICRONUTRIENT DEFICIENCIES

IODINE DEFICIENCY

- It results in **mental impairment** that reduces **intellectual capacity** at home, school and at work.

VITAMIN A DEFICIENCY

- It causes severe **visual impairment** and **blindness**, increases the **risk of severe illnesses** and even **death**.

IRON DEFICIENCY

- Iron deficiency affects **large number of children and women** in **developing countries**. Over **2 billion people** i.e. **30%** of the world population are **anemic**.
- Body does not have enough **iron** to **produce hemoglobin**, which is part of **red blood cells**.
- Hence, the **carrying capacity of oxygenated blood** throughout the body will be affected.
- This **ultimately results in anemia**.
- The results are **fatigue, reduced performance, lower productivity**. Overall it affects **development potential of individuals, societies and national economies**.
